That a trade paper can be of great worth to the line of business it represents goes without comment and its worth can be measured in proportion to its use. By this is not meant the total issue printed and circulated altogether, but the total number of its interested readers. This information cannot be easily obtained, but it is a well-known fact that a trade paper has vastly more readers than subscribers. There are several reasons for this. One reason is that a tradesman who thinks he cannot afford to subscribe for one of his trade papers will borrow of his neighbors. He is like a man without a watch. He wants to know the time, and to learn it he must consult the watch of another man. Another method by which extra readers are gained is through the proprietors or managers of establishments. They realize the worth of a paper akin to their business, and will often pass their trade papers around among their employees. Some of the firms go further and will subscribe for a dozen or more of these papers and distribute them among their employes. They do this because they want keen, bright, well-read men behind their line of business, and the trade reviews sharpen these virtues. The public libraries also realize their value and are among the great patronizers of the trade press issues, and supply their shelves liberally with them. There they are read and reread by a large number of trade people. Many expert tradesmen who have risen from the ranks will admit that they owe their success, in a large measure, to the keen interest with which for years they have followed the progress and policy outlined by the leading papers of the trade of which they were a part.—Trade Press List.

WARNOCK CO. EXPANDS.

The James Warnock Co., Limited, Galt, Ont., have recently acquired the business of James Warnock & Co. and will continue in a much larger way the manufacture of edge tools and lumbering tools in which Messrs. James Warnock & Co. have acquired so wide and enviable a reputation. The new company have just disposed of their spring business and will replace their spring plant with a new and entirely modern edge tool and lumbering tool plant. Within six months the James Warnock Co., Limited, will be in a position to supply their numerous customers with tools of the highest possible grade in any quantities they desire.

HARDWAREMEN IN ENGLAND.

REPORTS from England state that the Canadian Manufacturers' Association party touring Great Britain are having a most enjoyable and instructive time. They have been received by the King and have been banqueted in many places, addresses of importance being delivered on tariff and Imperial questions by leading statesmen and manufacturers.

Those representing the hardware trade who are making the trip are as follows:

Allan, F. B., Toronto, Nonsuch Manufacturing Co. (shoe polish).
Boeckh, E. C., Toronto, United Factories, Limited (woodware).
Breckenridge, C., Hamilton, Norton Manufacturing Co. (tinware).
Bush, H. T., Port Hope, Standard Ideal Sanitary Co. (lavatory fittings).
Chapman, S. H., Toronto, Ontario Wind Engine & Pump Co. (engines and pumps).
Cockshutt, H. W., Brantford, Cockshutt Plow Co. (ploughs).
Craig, B. A. C., Toronto, Canada Corundum Co. (corundum).
Depwe, T. S., Hamilton, Sawyer & Massey Co. (engines).
Doolittle, E. A., Toronto, Standard Meter Co. (meters).
Fairbairn, Edward, Toronto, Ontario Wind Engine & Pump Co. (engines and pumps).
Fleury, A. W., Aurora, J. Fleurys Sons (agricultural implements).
Frost, H. L., Hamilton, Frost Wire Fence Co. (fencing).
Galligan, J. Orr, Hamilton, Ontario Tack Co. (tacks).
Gartshore, A. L., Hamilton, Gartshore Thomson Pipe Co. (iron pipes).
Gartshore, Lieut.-Col., London, McClary Manufacturing Co. (stoves).
Gould, J. G., Hamilton, Gurney Scale Co. (scales).
Gray, Robert, Chatham, Wm. Gray & Sons Co. (carriages).
Halstead, J. A., Mt. Forest, J. A. Halstead.
Harmer R., Toronto, Sawyer & Massey Co. (machinery).
Harris, Lloyd, Brantford, Under Feed Stoker Co. (stokers).
Hobson, J. I., Hamilton, Hamilton Iron & Steel Co. (founders).
Howland, G. W., Toronto, Graham Nail Co. (nails).
Hutchings, E. F., Winnipeg, Gt. West Saddlery Co. (saddlery).
Leslie, A. C., Montreal, A. C. Leslie & Co., iron and steel merchants.
McFarlane, Thomas, Smiths Falls, Frost & Wood Co. (agricultural implements).
McKinnon, D. J., Toronto, Pease Foundry Co. (stoves).
McKinnon, L. E., St. Catherines, McKinnon Dash and Metal Co. (saddlers' hardware).
Maxwell, Jas., St. Mary's, D. Maxwell & Son Co. (agricultural implements).
Moffat, T. L., jun., Weston, Moffat Stove Co. (stoves).
Nicholls, H. G., Toronto, Canadian General Electric Co. (electrical apparatus).
Notman, John C., St. Catherines, McKinnon Dash and Metal Co. (hardware).
Pennington, J. D., Dundas, Valley City Sitting Co (chairs).
Robertson, Jas. A., Montreal, James Robertson Co., Limited (paint).
Robinson, S. D., Hamilton, D. Moore & Co. (stoves).
Rogers, A. S., Toronto, Queen City Oil Co. (oil).
Scott, R., Galt, R. Scott & Son (wheels).
Sheridan, J. T., Toronto, Pease Foundry Co. (stoves).
Sinclair, J. M., Toronto, Eureka Mineral Wool & Asbestos Co. (engine packing).
Smith, R. Home, Toronto, Pease Foundry Co. (founders).
Steedman, J. P., Hamilton, Gurney Scale Co. (scales).
Thomson, Dr. W. P., Toronto, Polson Ironworks Co. (founders).
Tudhope, W. H., Orillia, Tudhope Carriage Co. (carriages).
Vanstone, L. N., Toronto, Graham Nailworks (nails).
Waddell, Hugh, Toronto, Henderson Roller Bearing Co. (roller bearings).
Waterous, D. J., Brantford, Waterous Engine Works (engines).
Wiggs, W. H., Quebec, Mechanics' Supply Co. (plumbers' goods).
Wright, H. G., Hamilton, E. T. Wright & Sons (tinware).
Wylie, Norman L., Toronto, New Warren Scale Co. (scales).

Window space is valuable for advertising. Are you utilizing it to the best advantage?

Dark Interiors Made Light.

The only daylight-increasing window glass combining lenses and prisms.

MAXIMUM LIGHT GLASS

Involves new applications of daylight; should not be confused with ordinary corrugated or prismatic glass. Used throughout the world. Unequalled. Our booklet will show you the opportunities that await YOU. We will also send sample of the glass.

CURRENT MARKET QUOTATIONS.

July 7, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost must in all cases accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

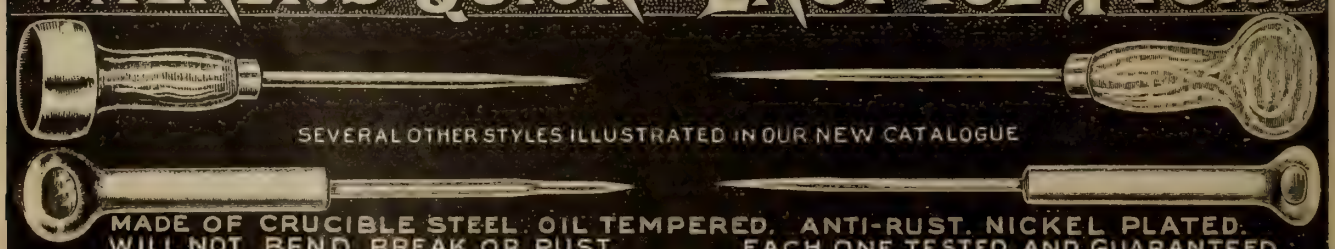
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.



Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

E. G. COODERHAM, Managing Director

In Selling Horse Nails

Don't forget, that the recollection of the quality will remain with the purchaser, long after the price has been forgotten by him.

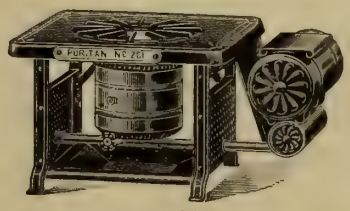
Also, that cheapness is not based on what you pay for Horse Nails, but upon what you get for what you pay.

We solicit your orders for our "C" brand Horse Nails, which we have been manufacturing in Canada for the past forty years.

They represent the best in every particular—quality of material, pattern and proportions. We use exclusively Swedish Charcoal Steel Nail Rods for their manufacture, which by our special process, and with skilled artisans of long experience, enables us to produce Horse Nails equal to any in the world—bar none.

When ordering Horse Nails, please specify particularly for our "C" brand, and accept no other substitute, especially at same price. We shall be pleased to supply you, if you cannot obtain them on request.

Our price is 40, 10 and 7½% discount, f.o.b. Montreal.

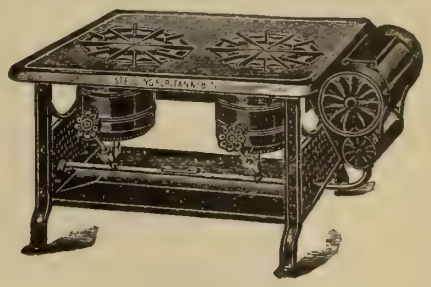


CANADA HORSE NAIL COMPANY,
MONTREAL.

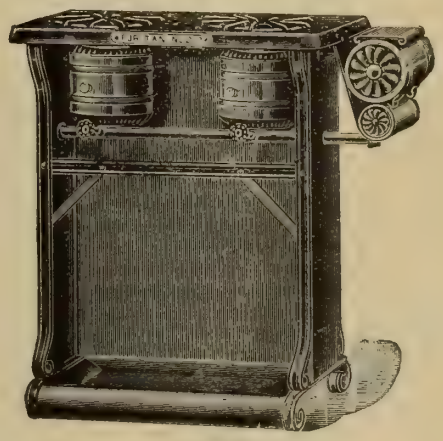
Established 1865.

BLUE FLAME COAL OIL STOVES

No. 203

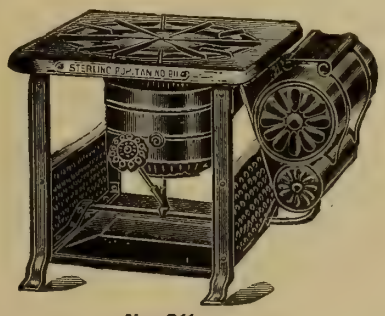


No. 201



No. 202

Nos. 811, 812, 813, are "Sterling-Puritan." Nos. 201, 202, 203, 212, are "Puritan," which is quite similar in construction, the principal difference being in the construction of the valve. The "Puritan" is cheaper. We stock this stove and Nos. 811, 812, 813, 852, 853, 844, and 845 of "Sterling-Puritan."



No. 812

The best wickless stove on the market. Simple in construction, perfect in operation; cheaper than gas, coal, wood or gasoline, and much cooler and more satisfactory to work with. Will do any kind of cooking. Just the thing for kitchen, camp, nursery and bath-room. Special features, such as the improved vaporizing bowl, and specially constructed top grates, covered by strong patents. Every stove guaranteed.

ADVANTAGES OF THE

IDEAL COMBINATION COOKER AND BAKER

On an ordinary basis the cooker saves 144 hours labor and over a ton of coal each season. Easy to manage and keep clean. The cooker will pay for itself in one season for cooking canned fruit alone; and it is just as good for baking as for cooking. Retains the nutriment of the food and saves one-third of the food lost by ordinary cooking methods. No boiling dry, nor burning. No offensive odors, nor damp walls. We guarantee the cooker will pay 100 per cent. interest annually. Made in eight different sizes, varying from 9¾ to 20 inches in height, and having a capacity of from 2¼ to 14 gallons Prices range from $2.50 upwards Booklet on request.

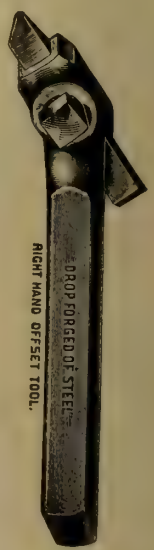
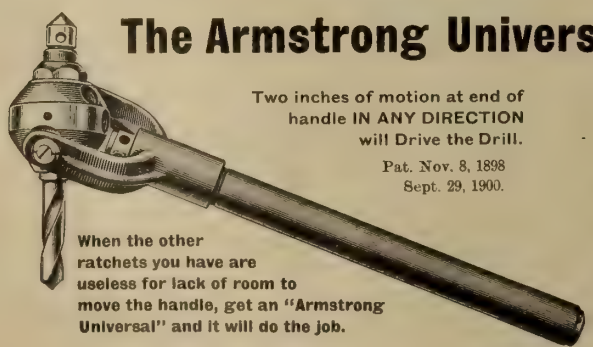
IF YOU OWN STOCK

in a tool steel mill there may be some excuse for you continuing to forge lathe and planer tools. You may get some of the loss back in dividends.



ONE POUND OF TOOL STEEL USED IN AN ARMSTRONG TOOL HOLDER



Patented February 28, 1893.

EQUALS TEN POUNDS USED IN FORGED TOOLS

The Armstrong Universal Ratchet Drill

Two inches of motion at end of handle IN ANY DIRECTION will Drive the Drill.

Pat. Nov. 8, 1898
Sept. 29, 1900.

When the other ratchets you have are useless for lack of room to move the handle, get an "Armstrong Universal" and it will do the job.

STRONGER and FASTER than any other rachet made.

Even a vertical movement of handle drives the drill.

Adopted by the U. S. Navy.

SUCCESSFUL ADVERTISING

How to Accomplish It

By J. ANGUS MacDONALD

Competent critics have recognized this as the **Best Book on Advertising** yet published. It is a PRACTICAL work for advertisers and business men.

The *Brooklyn Eagle* says of Successful Advertising :

"Advertising is one of the biggest businesses—perhaps the biggest business—in the world. To treat of it comprehensively is as difficult as to treat comprehensively of military strategy or the making of a newspaper. Mr. MacDonald has succeeded. He has produced an admirable and exhaustive monograph.

"Perhaps the deepest pitfall into which an author might fall in writing upon such a subject as this is too much theory and not sufficient practicality. Most happily has Mr. MacDonald avoided this chasm: he writes from practical experience in the field, and his methods as presented have been given the thorough tests of time and circumstances.

"Any one with even a superficial knowledge of advertising cannot but perceive that in the many examples shown are evidenced a thorough knowledge of the subject and a businesslike and practical grasp of advertising which is far removed from the light, airy and entirely impractical and hare-brained stuff which is not uncommon in literature treating of the subject of advertising."

The General Advertiser, The Retail Advertiser, The Advertising Writer, The Mail Order Advertiser will find this work invaluable. The price is out of proportion to its worth. Cloth bound. 400 pages.

Winnipeg as a Wholesale Centre

IT is a commonplace to indulge in high-flown generalities concerning the wonderful growth of Winnipeg during recent years as a wholesale distributing centre for Western Canada, and it is not the intention of the present article to repeat a multitude of platitudes and generalities which are now as an oft-told tale. At this day no one doubts the prosperous present and still more roseate future of Winnipeg and the great fertile prairie country lying west of the lakes. It is no longer fashionable to doubt it; the westerner is outdone in his praises of the newer Canada by the eastern man, who probably knows the country only by hearsay. Business men in all parts of Canada are looking to the west for the expansion of their trade, and the interests of the country west of the lakes occupy about three-quarters of the time of the Dominion Parliament. It is not necessary to occupy any valuable space explaining in a general way the wealth and potentialities of the west.

But, while no one now is brave enough to cast any doubts upon the prosperity and bright prospects of Winnipeg, it is nevertheless the case that very few visitors on their first arrival in Winnipeg are prepared to see the immense warehouses in which the merchant princes of the western city transact their business. The man from Montreal or Toronto who pays his first visit to Winnipeg is not prepared to find warehouses as large as those he has known in the large eastern cities and many that are larger. He is not prepared to find in a city of about 80,000 inhabitants serving a country whose population is not much in excess of one half million, warehouses larger than he has known in eastern cities of larger population serving a constituency with a much larger population. But this is exactly what he finds. In spite of all that he has heard the reality surprises him

This article attempts to sketch the history of the leading jobbing and manufacturing firms of Winnipeg, and to show by illustrations to what proportions the Winnipeg firms have grown. Winnipeg's business history is yet in the making and there are few firms here which have been in business in Winnipeg for twenty years. The number who have commenced doing business in Winnipeg or have built large warehouses during the last four or five years is astonishing. New establishments are being opened out with astonishing rapidity, and the number of eastern firms sending representatives to Winnipeg and establishing branch warehouses and sample rooms to cater to the western trade is legion.

Nevertheless there are few indications of a boom; the rapid growth of Winnipeg as a commercial and distributing centre rests upon solid foundations. It is true that a number of firms have built beyond their present requirements, but he is a foolish business man in Winnipeg who does not provide for future expansion. At the present moment Winnipeg is the undisputed distributing centre for the people of the most fertile and largest continuous wheat belt in the world. It is true that only a small portion of this wheat area is yet under cultivation, but immigrants are pouring in by the thousands every season to take up free Government lands and every new arrival means a new customer to be supplied from Winnipeg or the east. Undoubtedly there will be other jobbing centres in the west, but Winnipeg, having been first in the field, should maintain the first place. Her relative importance as a commercial centre is shown by the fact that she ranks third in Canadian cities in clearing-house returns.

Winnipeg, Looking North.

Few Manufacturing Industries.

A glance through the pages that follow will show that there are as yet very few manufacturing industries in Winnipeg. The prairie city is, as yet, essentially a distributing centre, handling the manufactured products of eastern cities and outside countries. That this will always be the case no person believes, and already there are a number of pros-

perous manufacturing plants. The chief drawback is the absence of cheap power. Power generated from coal costs relatively so much more in Winnipeg than in the east that manufacturers hesitate to locate here. At the present time the city council and the most enterprising business men are looking for a solution of the difficulty in the water power available at the Winnipeg River, between sixty and seventy miles distant from Winnipeg. It is urged by those who have studied the situation that, contrary to the popular opinion, Winnipeg occupies one of the most commanding positions of any manufacturing centre in the country, and that it will be the fault of Winnipeg's citizens if the advantages of cheap water power are not realized.

distance there are three principal groups of falls. The first is Big Bonnet Falls, with a drop of over 35 feet; the second is White Mud or Electra Falls, with a drop of 13½ feet, and the third is Silver Falls, with a drop of over 22 feet.

It is estimated by power experts that the Big Bonnet Falls will easily yield 390,000 horse-power, that the Electra Falls will yield 227,000 horse-power, and that the Silver Falls, if improved, will yield additional 227,000 horse-power, or a total of 884,000 horse-power within 6½ miles.

That is, within 65 miles of Winnipeg, an enormous amount of water power is going to waste and is available for use in Winnipeg if advantage be taken of the situation of the city. It is estimated that this amount of power is equal to

Winnipeg River and of the St. Andrew's Rapids on the Red will mean a revolution in the industries of Winnipeg. In addition to being the distributing centre for the west Winnipeg will also be its manufacturing centre.

J. H. Ashdown Hardware Co., Limited.

Closely associated with the history of Winnipeg is the name of Jas. H. Ashdown. The history of Mr. Ashdown and his business is indeed the history of Winnipeg, and one might almost say that wherever anything is known of Winnipeg the name Ashdown is associated with it. Ashdown's wholesale is undoubtedly the oldest hardware business in the west, and although there is no design in the arrangement of the references in this article to the different

RETURNED

J. H. Ashdown Hardware Co., Winnipeg.

Water Power.

In a paper by Mr. Chas. Esplin, who has made a personal examination of the Winnipeg River and has given the whole power question a careful study, the situation is reviewed at length. The commonly accepted data show the elevation of the Lake of the Woods to be 1,042 feet. The elevation of Lake Winnipeg is 710 feet, and the total fall of the Winnipeg River from the Lake of the Woods is consequently 332 feet. The portion of the river in which Winnipeg business men are most keenly interested because of its potentialities as a source of cheap power is near the Big Bonnet Falls. In a distance of less than six and one half miles from the head of the Big Bonnet Falls to the foot of Silver Falls the river drops over 94 feet and in that

that which can be obtained from 7,000,000 tons of coal per year.

The river at the points in question is about half a mile wide. It contains not only the water from the region drained by the Lake of the Woods and its tributaries, but also another volume of water about twice as great, from the region drained by the English River and its tributaries. Sixty feet is not an uncommon depth and the volume of water is not less than 7 000,000 cubic feet per second. While several hundred thousand horse-power can be developed there, the total amount of horse-power used in the manufactures of Toronto is about 150,000 horse-power.

It is unnecessary to dwell upon the possibilities which access to such power opens to Winnipeg industries. The development of the water power of the

firms, it is only fitting that precedence should be given to the pioneer business.

The story of Mr. Ashdown's business career is so well known that there is no necessity to go into details. It is very interesting to note in that quaint, gossipy old book, Begg's "Ten Years in Winnipeg," (1869-1879), various references to the Ashdown business in its early modest beginnings. In the early pages of the book the following reference is made :

"Jas. H. Ashdown arrived in Winnipeg shortly before the Rebellion, and started a small tinsmith shop in a room in the buildi[illegible] opposite the Hotel du Canada, on Post Office street. Unfortunately for him, however, he became mixed up in the troubles of the country and was held for some time in durance vile, a prisoner in Fort Garry, during

his sojourn in which his small shop remained closed, no doubt at great sacrifice to the proprietor. Mr. Ashdown having bought out one Moser—a tinsmith who left for the States—by strict attention to his business and hard work began to build up a good trade. He had no opposition, and as the other stores gave way to him in the hardware and tinware trade he had a fine opportunity to make money."

Evidently the business was growing, and it is amusing to find in the chapter devoted to the year 1871 the following reference to Mr. Ashdown and his store: "We see about this time an evident reign of prosperity in the business of J. H. Ashdown, for that gentleman, finding his trade increasing so rapidly, had to engage an assistant tinsmith." In that year it appears that Mr. Ashdown secured the contract for the first tin roof in Winnipeg, the work being done for Bannatyne & Begg. It was in that year also that Mr. Ashdown built his first store on the Main street site of his present retail establishment. To quote again from that quaint old chronicle of the early days of Winnipeg: "Mr. J. H. Ashdown finding his premises too small on Post Office street erected a store for himself on Main street. It was two storeys high, and its dimensions were 20 x 40 feet. It was flat-roofed and covered with tin." Readers familiar with the Winnipeg of to-day can not help comparing the description of that first Main street store with the handsome structure destroyed by fire last Fall, and the still more handsome building now in course of construction on the old site. It is small wonder that, as Mr. Ashdown explained at the meeting last February of the Western Retail Hardware Association, he is much attached to the old site, and did not hesitate long in his decision to rebuild.

The old chronicle by Beggs rambles on in gossipy style, and there are frequent references to the Ashdown business. The story of the year 1876 tells of his first dinner to his employes and commends the custom to the favorable attention of other firms. To quote again from the old chronicle: "To give some idea of the trade of the Northwest we will here mention one small order given Jas. H. Ashdown in March, 1876: 3,500 tin pails, 1,800 round pans, 1,500 oval pans, 1,800 pint cups, 1,500 half-pint cups, 400 teapots, etc. No wonder Ashdown grew rich."

Evidently the west was in those early days a country of large ideas and increasing trade.

In the advertising pages of this old volume there is a page devoted to the following announcement of the Ashdown firm:

HARDWARE
MILL AND RAILROAD
SUPPLIES.
HOUSE FURNISHING GOODS.
COAL AND WOOD STOVES.
THE LARGEST AND BEST ASSORTED STOCK IN THE PROVINCE.
AGENTS FOR HALL'S SAFES.
WHOLESALE AND RETAIL.
J. H. ASHDOWN
331 and 333 Main Street,
WINNIPEG.

From such small beginnings has sprung the immense wholesale business of the J. H. Ashdown Hardware Co., Limited. The story of its growth is the story of the growth of the west, and it has kept pace with the immense development of the New Canada beyond the lakes.

The officers of the company are: Jas. H. Ashdown, president, and John Emslie, secretary-treasurer. A. Buehler is manager of the business.

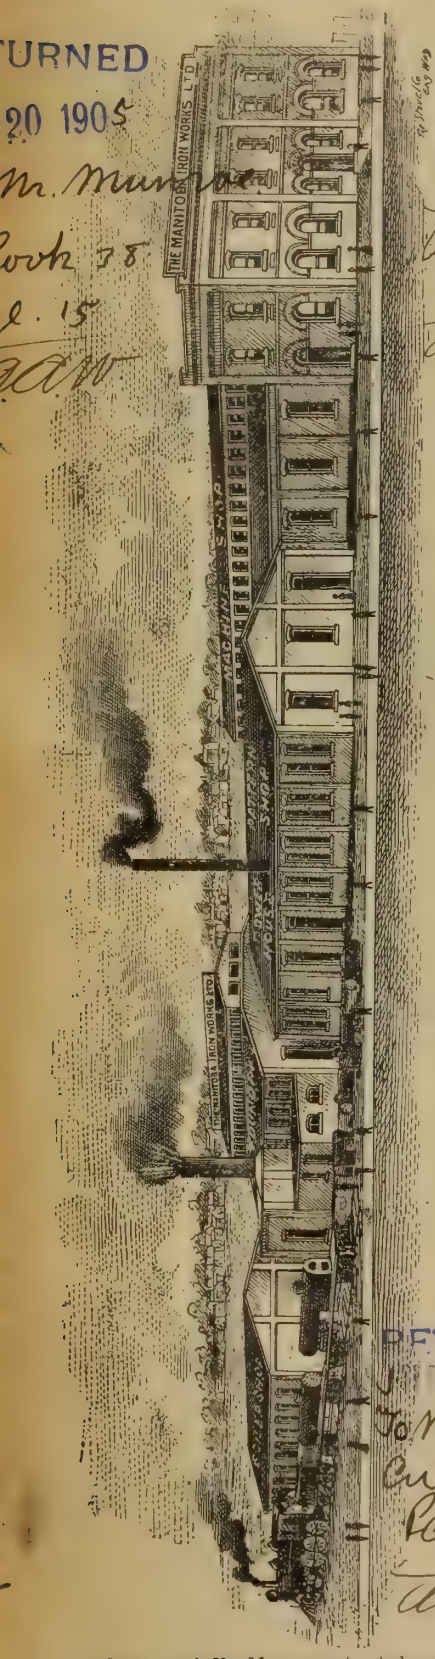
Warehouse Marshall-Wells Co.

Marshall-Wells Co.

It was in the year 1900 that Marshall-Wells Co. opened an office in Winnipeg, with W. G. McFarlane in charge. The business was then a branch of the Marshall-Wells Hardware Co., of Duluth, but in 1901 it became a separately incorporated concern under its present name, Marshall-Wells Co. W. G. McFarlane was elected vice-president and manager of the Canadian business, and he is still in charge of it. The growth of the business in the five years of its Canadian history is evidenced by the increase in the number of its travelers. During the first two years they employed two travelers and had an office staff of three. In 1905 they have eight travelers and some 65 employes in the office and warehouse.

Warehouse of The McClary Manufacturing Co.

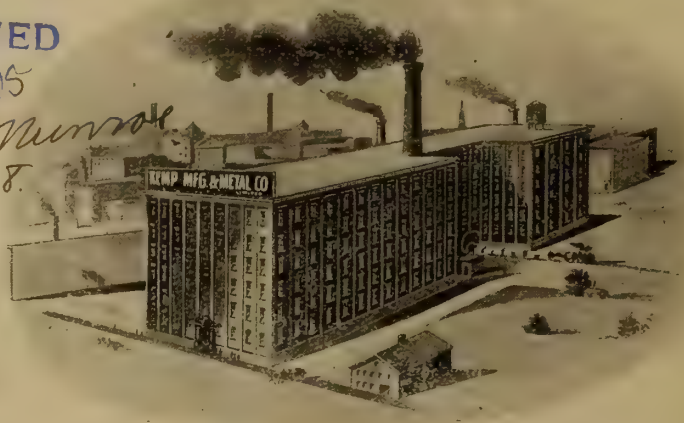
The present warehouse was built in 1901, and already it is too small to accommodate the business. Property has been purchased on Market street and a new warehouse eight storeys high is to be erected very soon. The plans for its construction are now well under way.



The officials of the company are as follows: W. G. McFarlane, vice-president and manager; A. B. Kent, secretary; H. M. Howell and T. G. Matheers, Canadian directors. E. B. Loucks is sales manager.

McClary Manufacturing Co.

Like so many other firms, the McClary Mfg. Co. date their existence in Winnipeg since the exciting "boom" days of 1882. It was in March of that well-remembered year that a branch of the McClary Mfg. Co., of London, was opened in Winnipeg and a stock was carried in the Prairie City. The first location of the firm was in a small building on Point Douglas avenue, and the business was opened there by J. W. Driscoll, who is still in charge. The present building was erected about three years ago, and with an addition which has been built to it since it is now six storeys high with a basement. The dimensions are 50 x 135 feet, and hence ample accommodation is afforded for carrying a large stock in Winnipeg. McClary's stoves, ranges, furnaces, tinware and similar manufactures are carried in stock in Winnipeg.



The Manitoba Iron Works.

A new firm which has made a place for itself in the West is the Manitoba Iron Works, which was organized in March, 1903, by T. R. Deacon, H. B. Lyall, J. A. Coulter, and R. Murray, to take over the business and plant of the Standard Machine Works, Winnipeg, and the Rat Portage Iron Works of Rat Portage. A general foundry and machine business is conducted in the works of the company on Logan avenue west, where they have approximately 25,000 square feet of floor space. While machinery is given the most attention by this firm many of their manufactures are handled through the hardware trade. General mill supplies are manufactured and carried in stock. As may be seen from the illustration, their works are very extensive.

Factory and Warehouse of the Kemp Metal and Manufacturing Co.

Kemp Manufacturing & Metal Co., Ltd.

As it name implies, the Kemp Mfg. & Metal Co., of Winnipeg, is an offshoot of the Kemp Mfg. Co. of Toronto. Although now a separate incorporated company, the business was opened first in April, 1900, as a western branch of the Toronto house. The immense new building illustrated herewith was erected in the Fall of 1903, and in April of the following year the western branch was incorporated as a separate concern under its present name of the Kemp Mfg. & Metal Co., Limited. A great part of the firm's output is manufactured in Winnipeg, and large stocks are carried. Enameled sheet metal ware, plain and re-tinned, stamped and pieced tinware, metal shingles, siding and accessories, are among the lines manufactured and handled in Winnipeg.

The officers of the company are: - A. E. Kemp, M.P., president; W. A. Kemp, vice-president; John E. A. Wildman, secretary, and Wm. Crawford, director.

The Winnipeg Paint & Glass Co., Ltd.

A newcomer would find it hard to realize that the Winnipeg Paint & Glass Co., with its large handsome warehouse in the city proper and its factories in Fort Rouge, dates its existence only from January 1st, 1903. The thirty months of its history have been marked by a rapid development, and the company is an important factor in the paint, oil and glass trade of the western market.

Business was commenced on Donald street, and in 1904 the present warehouse and ornamental glass factory was built on Notre Dame street east. This ornamental glass factory is one of the most interesting establishments in the west for there can be seen in full operation the only plant of its kind in Canada outside of Toronto and Montreal.

In the basement of the building is the sand blast machine, which is used in the

aaw.

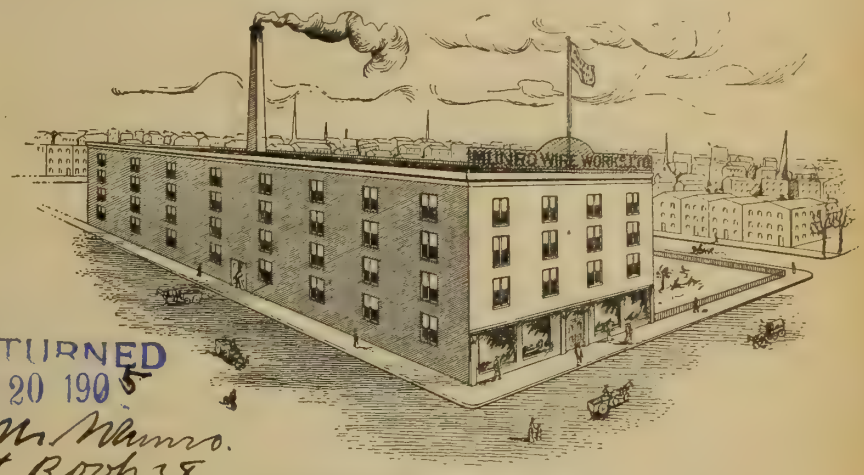
manufacture of ground glass, while the whole of the upper storeys is occupied by the bevelling plant, mirror works, lead and copper light department and glass painters room.

In the bevelling shop, under the charge of Mr. McGinnis, there are in operation eight bevelling machines of the latest pattern, while adjoining the bevelling room are the mirror works, where the company also do acid cut work and manufacture artistic chipped glass, such as is used in bank partitions, office doors, etc.

In addition to this ornamental glass factory and a woodworking factory in Fort Rouge, where they manufacture office and bank fittings and similar goods, the company have their plate glass and Portland cement warehouses at the foot of Notre Dame avenue.

E. Cass is president of the company, James McDiarmid and John Carr are vice-presidents, and R. W. Paterson is secretary-treasurer.

George D. Wood & Co.



The Winnipeg firm of Geo. D. Wood & Co. are a branch of the Hamilton firm of Wood, Vallance & Co. Few Canadian firms have a longer history than this well-known hardware house. It was founded in 1849 by the late Senator A. T. Wood, and the business was conducted under his name for ten years. In 1859 the firm name was changed to Wood & Leggat, and the business was conducted under that name until 1889, when the firm became known under its present name of Wood, Vallance & Co.

The Winnipeg branch was opened in 1880, under the name of Geo. D. Wood & Co. The establishment of a branch in Winnipeg was a step in accordance with the policy of the firm, for there are at the present time other branches of the Hamilton firm in Nelson, Vancouver and Toronto. The firm are known in Nelson as the Wood, Vallance Hardware Co., and in Vancouver as Wood, Vallance & Leggat, Limited.

The Winnipeg branch is among the oldest of the wholesale hardware firms of Winnipeg, and it has always been an important factor in the wholesale hardware trade of the west. The large warehouse on McDermot avenue was built by Geo. D. Wood & Co. in 1897, and as they have, in addition, a large heavy goods warehouse near the C.P.R. tracks they have ample facilities for handling their increasing trade.

Munro Wire Works.

"Made in Winnipeg" is the motto of the Winnipeg branch of the Munro Wire Works, and the device is being stamped on all the goods which they manufacture in the Prairie City. Early in the year Jas. Munro came to Winnipeg from New Glasgow, N.S., and started a factory in the old Scott Furniture warehouse on Graham avenue. The plant in Winnipeg is already quite extensive and additions are contemplated as the growth of the business warrants them. Wire fencing, door mats, bed springs, almost anything that can be made from wire, are among the manufactures of this firm. "The spring that springs and will not sag," is the phrase used by Mr. Munro in describing the bed springs of his own invention and manufacture.

Winnipeg Ceiling & Roofing Co.

One of the new manufacturing industries of Winnipeg which has already by its aggressive policy won for itself a place in the western trade, is the Winnipeg Ceiling & Roofing Co., whose plant is situated in Fort Rouge. Formed only one year ago, it is now manufacturing a large output which is sold in all parts of the west. All Western Canada is building, and hence metal roofing and ceiling supplies of the right quality find a ready market.

The factory is fairly large, its dimensions being 50 x 220 feet, and there is a large output of iron roofing and siding, metal ceilings, cornices and skylights. Special attention is being paid to a new line of eavetroughing. Expansion has been the motto of the firm from the first, and they are now putting in a 15 ton press for the manufacture of metallic window frames. In addition to their own manufactures the company also job different lines of galvanized iron and tin plate.

W. J. McMartin is president and manager of the company, W. McFarland is vice-president, and T. J. Mathers is secretary.

Page 15

Vulcan Iron Works, Limited.

Winnipeg has still very few manufacturers, but she has reason to be proud of the extensive plant of the Vulcan Iron Works, Limited. The business dates back to the year 1874, when it was conducted under the name of McKechnie & McMillan. Later it was known as the Vulcan Iron Co., and now it is conducted under the name of the Vulcan Iron Works, Limited. The president of the company is John McKechnie, and the offices of vice-president,

secretary and treasurer are filled by E. G. Barrett.

The company have a very extensive plant to the north of the C.P.R. tracks and opposite the new C.P.R. station. Extensive additions have been made during the last three or four years, and the plant would do credit to cities which make greater pretensions than Winnipeg to be manufacturing centres.

Merrick, Anderson & Co.

This firm, founded in 1882 by Geo. A. Merrick and Thos. A. Anderson, illustrates the tendency of modern business towards consolidation. They are a firm of manufacturers' agents representing in the west nine large industries which do a thriving business in this part of Canada. Stock is carried for these firms in the big warehouse illustrated herewith, which is situated at 117-119 Bannatyne avenue east. This is a five-storey brick structure with a basement, the dimensions being 77 x 99 feet.

Warehouse Merrick, Anderson & Co.

Full lines of goods are carried for the following firms: Burrow, Stewart & Milne, Hamilton — "Grand Jewel" stoves, ranges furnaces, scales of all kinds, etc.; the D. Moore Co., Limited, Hamilton—stoves, furnaces, hollow ware, tinners' tool machines, etc.; the Canada Paint Co., Limited, Montreal—"Elephant" brand white lead and ready-mixed paints; the Thos. Davidson Mfg. Co., Limited, Montreal—stamped tin and enameled steel ware of all kinds; the Manitoba Building Paper Co., Winnipeg—plain and tarred building paper, ready roofing, etc.; the Dominion Bag Co., Limited, Montreal—jute and cotton bags of all kinds and for all purposes, printed in Winnipeg; Wortman & Ward Mfg. Co., London—pumps of all kinds; National Sewing Machine Co., Belvidere; Eldridge B. Sewing Machines, and the Consumers' Cordage Co., Montreal—binder twine and cordage.

The firm have six travelers covering the territory to the Rocky Mountains.

James Robertson & Co.

The Winnipeg branch of Jas. Robertson & Co., of Montreal, was established in the late 70's, some time before "the boom." While the manufacturing end of the business is confined to the east a complete stock of the firm's manufactures and of general lines of hardware has always been carried in Winnipeg. The firm have always been in their present location on Pacific avenue. Twelve years ago their place of business was destroyed by fire, but they rebuilt on the same ground. Jas. Robertson & Co. are among the oldest of the Winnipeg wholesale hardware establishments, and they have always had an enviable reputation for fair dealing.

G. F. Stephens & Co., Limited.

This firm dates its existence since 1882, being established like many others in the old "boom" days. Unlike many of its contemporaries of that period, it survived the early troubles and is now one of the strongest houses in the west. In the early days the only towns outside Winnipeg were Emerson and Portage la Prairie, and hence there was not very much scope for a wholesale paint business. A start was made in the old Spencer block in a flat 25 x 75, and after a time the firm moved to premises on Main street adjoining the Molson's Bank. For two years the firm were located in this old "Bird Block," and then a move was made to their present location on Market street, the building being first rented and afterwards bought outright. Large additions have been made, a complete manufacturing plant added, and further additions are to be made this Summer. In 1901 the firm were incorporated as G. F. Stephens & Co., Limited, and two years later the growth of the business was evidenced by the establishment of a branch at Calgary.

G. F. Stephens is president of the company, and M. F. Christie is secretary-treasurer.

Henderson & Potts Co., Limited.

This firm are among the new arrivals in the western field, that is to say, they have only recently opened their Winnipeg branch, although, of course, their Anchor brand paints were sold the western trade before. The Winnipeg and western business is in charge of J. Irwin, who was formerly in a responsible position in the Montreal office of the company. H. V. Lawlor represents the firm on the road, and has the reputation of being a hypnotic salesman. This charge he disclaims himself and ascribes it all to the merits of his goods. A stock is carried in a warehouse at the eastern end of Lombard street, and western merchants will be welcomed at the office during the Exhibition.

P. D. Dods & Co., Limited.

A branch of this well-known paint firm has recently been opened in Winnipeg, premises having been secured on Smith street. The Winnipeg branch is in charge of Ernest Guertin. For years the western trade have been supplied with "Island City" paints from Montreal, but with a branch in Winnipeg even better service should be assured the trade. The firm's Winnipeg history is only a few months old, and hence is necessarily brief, and its Montreal history is beyond the scope of this article. The opening of a branch in Winnipeg is a good business move and shows the sagacity of the general manager, Mr. Tougas.

Oil Companies.

The demands of the west for illuminating oils are supplied by three companies. The trade in lubricating oils is more widely distributed.

Mackenzie Brothers.

Mackenzie Bros. date their existence as a Winnipeg firm since 1898, when the two brothers, John and Gordon, came to the Prairie City from Sarnia, Ont., and commenced business as manufacturers' agents, representing two or three eastern firms. The new firm steadily added to its list of agencies, and recognizing the advantage of carrying a stock in Winnipeg they secured a warehouse on Bannatyne avenue, where they remained until the growth of their business demanded larger quarters. They are now located at 244 Princess street in a large brick warehouse about five times the size of their previous one. They have excellent track facilities at their new warehouse and all conveniences necessary. They conduct a wholesale business in hardware specialties, confining themselves principally to heavy hardware and building supplies. Their travelers now cover the territory from Fort William to the Rocky Mountains, calling upon the hardware, harness and building trades. The following are some of the manufacturers for whom Mackenzie Bros. are exclusive western agents:

Doherty Mfg. Co., Sarnia, Ont. — manufacturers of stoves and ranges.

J. A. & W. Bird & Co., Boston, Mass.—"Rex Flintkote" roofing, etc.

Duplex Hanger Co., Cleveland, Ohio—Wall and joist hangers, etc.

American Mason Safety Thread Co., Boston, Mass.—Safety treads and sidewalk lights, etc.

Fraser-Johnson Saddlery Co., Hamilton, Ont.—Harness.

Hamilton Whip Co., Hamilton—Whips.

L. H. Gaudry & Co., Quebec—Cast iron "Scotch" pipes and specials.

Lavril's patent cast iron pipes and specials.

In addition to the lines of the above firms, Mackenzie Bros have a large stock of plain and tarred building paper, and other heavy goods. They are a growing firm.

Miller-Morse Hardware Co., Limited.

Perhaps no better example of the rapid but substantial and steady growth of a business house is to be found in any part of Canada than is to be found in the history of the Miller-Morse Hardware Co. The owners of the largest hardware warehouse in Canada commenced a retail business in Winnipeg in the old "boom" days of 1882. In 1887 they changed their business from retail

Warehouse Miller-Morse Hardware Co., Limited.

to wholesale, and built their first warehouse on Princess street. This marked the first step in the development of the present immense wholesale business.

Five years later the demands of a growing business made further extension necessary, and the warehouse then in use was duplicated by another immediately adjoining it, thus doubling the available floor space and storage capacity. In 1896 a third warehouse of the same size was built, affording evidence of steady growth.

Finally, in 1904, Miller, Morse & Co. built their present premises, which cover half of an entire block. The new building is five storeys high with a basement; dimensions 84 feet by 265 feet. This is probably the largest wholesale warehouse of any kind in Canada. Excellent track facilities are provided and cars can be loaded at the warehouse. There are six doors for receiving freight and six for shipping freight. The building is also equipped with three fast running elevators.

On January 1st of this year, simultaneously with the occupation of the new building, Miller, Morse & Co. were incorporated as the Miller-Morse Hardware Co., Limited. Although the name of the firm was changed the ownership is as before. Hyman Miller is president; F. W. Morse is vice-president; F. M. Morse is secretary, and A. Reed is treasurer.

The Sherwin-Williams Co., Limited.

In pursuance of their policy of "covering the earth," the Sherwin-Williams Co. have had a branch in Winnipeg since January 1st, 1903. Previous to that date Walter Woods & Co. had acted as their western agents. The Winnipeg branch was in charge of Benj. D. Ross, but as he found it necessary to spend much of his time on the road he was succeeded in the office by J. H. Hawkins. Mr. Ross now spends all his time on the road, and is ably assisted by two other travelers, J. J. Whalen and Harry H. Eager. These gentlemen cover the territory from Western Ontario to the Pacific Coast.

Northwest Machinery & Iron Co., Ltd.

The charter of the Northwest Machinery & Iron Co. is dated December, 1903, and since that date they have been carrying on a general machinery and blacksmiths' supply business. Readers of Hardware and Metal will remember that this firm met with disaster by fire last December, when their warehouse in Louise Bridge was totally destroyed. This fire has in a measure crippled the firm, but they are steadily regaining lost ground.

A large majority of the blacksmiths and carriage builders from Winnipeg to the Pacific Coast hold a few shares in the business. After the fire the company was reorganized. Clarence Vennilyea, the manager, bought out some of the larger shareholders and some changes were made in the directorate of the company. Clarence Vernnilyea is now president of the company, Hon. Hugh John Macdonald is vice-president, S. R. Mostyn is secretary, and A. Kirkland is treasurer. The management are preparing to put on the market the balance of the treasury stock, amounting to $25,000, and when it is sold the proceeds will be devoted to building a new plant in place of that destroyed by fire.

J. A. Ross.

J. A. Ross, manufacturers' agent, is sole Canadian agent for the Ideal Steam Cookers, and for some other strong lines. His place of business is at 141 Bannatyne avenue.

Ross & Ross.

Ross & Ross commenced business in Winnipeg in 1898, and having a good line of agencies they have secured a valuable connection among the trade. They are western agents for the Page Wire Fence Co., the K. C. Hay Press Co., and the Aullman & Taylor Machinery Co. They are locaeed on Market street east.

Consolidated Plate Glass Co. of Canada, Limited.

The Consolidated Plate Glass Co. have a branch establishment in Winnipeg at 271-273 Fort street. The western business is under the management of H. R. Wemp.

Pease-Waldon Co., Limited.

For many years the Pease Foundry Co., of Toronto, sold their line of "Economy" furnaces and general heating goods direct from Toronto through their travelers, but during the last year the Pease-Waldon Co. have been here on the spot to look after the growing demands of the western trade. A complete stock is carried in Winnipeg, and the business has been growing rapidly.

This season the company are placing on the market several new lines of heaters—warm air furnaces, hot water boilers and combination heaters for steam and ventilation. A new series of Pease "Economy" warm air furnaces has been manufactured to suit the special requirements of the western trade and the heating trade and general public are according it the encouraging reception which enterprise of the kind deserves. Booklets describing this furnace are now being distributed to western dealers.

The Pease-Waldon Co. sell their heating goods to the trade only where the trade employ competent mechanics capable of installing furnaces satisfactorily. A sufficient profit is secured by the local dealer to enable him to instal these heaters in a workmanlike manner. The company furnish the local dealer with plans for the installation of their warm air, hot water, steam and combination heaters.

Record Foundry & Machine Co.

Two years ago the Record Foundry & Machine Co., of Moncton, N. B., commenced to build on Mill street, Montreal, an immense stove foundry from which to supply the western trade. The foundry having been completed, it was decided to open branch warehouses in Winnipeg, Calgary and Vancouver. R. R. Kinread, who was in charge of this firm's exhibit at the Dominion Exhibition, held in Winnipeg last Summer, is in charge of the Winnipeg branch, which was opened this Spring and is located on Princess street.

Gurney Foundry Co.

The Winnipeg branch of the Gurney Foundry Co. was opened in 1898 by J. Drewe, who is still in charge. For the convenience of the western trade a full stock is carried in Winnipeg. The firm are located on Lombard street.

F. S. Hallam & Co.

This firm succeeded E. G. Low & Co. in March of this year, and they are conducting their business at the old location on Market street east. They are western representatives of the Guelph Foundry Co., the Ottawa Foundry Co., and the Western Foundry Co., of Wingham, Ont. Although a new firm their principals have been established in the western market for some time, and business is coming their way from the start.

Clare & Brockest.

Clare & Brockest are the western representatives of Clare Bros. & Co., Limited, and the Metal Shingle & Siding Co., Limited, both of Preston, Ont. They took over this business in January, 1902, and as they represent two strong and enterprising firms success has been assured from the first. They have a large warehouse on Princess street, where they carry a stock for these firms.

The Jas. Smart Manufacturing Co., Ltd.

It was in 1901 that this firm opened their branch warehouse in Winnipeg, and the move westward was made because of the steady growth of a business in the country beyond the lakes which could not be satisfactorily handled from their Brockville headquarters. The Winnipeg branch was directed by W. H. McGuire until his death in 1903, when he was succeeded in the management by Wm. Sutherland, who is now in charge. The firm have always been located in their present premises at 131 Bannatyne avenue east. During the last few months the Winnipeg stock has been considerably increased in several departments in order that sorting orders of all kinds may be promptly filled.

An exhibit of their general lines of hardware, "Perfection" stoves and ranges, and "Kelsey" warm air genera-

tors, will be made this month at the Winnipeg Exhibition, the exhibit being in charge of Malcolm Campbell. Special prominence will be given to the "Kelsey" heaters, lawn mowers, tools, and refrigerators. L. D. Sutherland will be pleased to welcome the trade at the warehouse during the exhibition.

Caverhill, Learmont & Co.

The western branch of Caverhill, Learmont & Co. is situated in the Stovel block, on McDermot avenue, where T. L. Waldon, the manager in charge, will be glad to welcome the trade during the exhibition.

The Imperial Oil Co., Limited.

The Imperial Oil Co., Limited, have offices in the Bank of Hamilton Building, and the business is under the general management of H. E. Sharpe. H. J. Guthrie has more especial charge of the lubricating oils department.

The Canadian Oil Co., Limited.

The Canadian Oil Co., Limited, of Toronto, have a branch in Winnipeg under the management of S. Walker. Their offices are situated in the Merchants' Bank Building, and their warehouse is in Louise Bridge. This company are also manufacturers of "Sterling" brand paints, oils and varnishes.

The Winnipeg Oil Co., Limited.

The Winnipeg Oil Co., Limited, have offices at 456 Main street. C. W. Filmore is president, Andrew Wright is vice-president, and George E. Cooper is secretary-treasurer.

McColl Brothers & Co.

This Montreal and Toronto house have a large branch warehouse in Winnipeg, on the corner of Henry and Sherman streets. The western branch is under the management of H. H. Bradburn, and a large business is done in lubricating oils and greases, and in varnishes and engine packings and similar goods.

Coltart & Cameron.

The firm of Coltart & Cameron, although one of the youngest, is at the same time one of the most aggressive in the west. It was formed in January, 1904, when John Coltart and W. S. Cameron entered into partnership and commenced a general commission business in hardware specialties, stoves, iron and brass beds, and similar goods. Having secured a strong line of agencies, to which they have been making constant additions, they at once became an important factor in the hardware trade of the west. Space would not permit an enumeration of all the agencies of this firm, but the following are some of them :

Findlay Bros., Carleton Place, Ont.
W. J. Copp, Son & Co.
The Rome Mfg. Co.
F. W. Bird & Son, East Walpole, Mass., and Hamilton, Ont.
Streator Metal Stamping Co.
Ferrosteel Co.

Winnipeg Rubber Co., Limited.

The Winnipeg Rubber Co., although operating under a different name, is in reality the western branch of the Gutta Percha & Rubber Mfg. Co., of Toronto. It has exclusive control of that company's goods in the west. For more than twenty years the Gutta Percha & Rubber Mfg. Co. have been represented in the west, but it is only since 1897 that their western branch has been known as the Winnipeg Rubber Co. The firm have commodious quarters in a large warehouse on Princess street, and they are able to carry a heavy stock. A. A. Andrews is manager.

Thomas Black.

Thos. Black has for years conducted a general manufacturers' agency business in hardware lines in Winnipeg, and he has a large warehouse on Lombard street where he has storage room for large supplies of goods.

F. J. C. Cox.

F. J. C. Cox is an established manufacturers' agent representing a number of important firms. Among others, he represents the Hamilton Powder Co., Dominion Powder Co., and Alex. McArthur & Co., of Montreal.

The Canadian Rubber Co.

The Winnipeg branch of the Canadian Rubber Co. is situated at 80 Princess street, where the company have a large warehouse enabling them to carry a heavy stock. This ancient company have been doing business in the west almost from the time when the country was opened up. Charles Holden is the manager in Winnipeg.

The Canadian Fairbanks Co., Limited.

A branch establishment of what was then the Fairbanks Co., Limited, was opened in Winnipeg in May, 1903, under the management of F. Ross Newman. After some delay the firm were located in the handsome large warehouse on Arthur street, which they now occupy. On March 15 of this year the Canadian business of the Fairbanks Co. was incorporated separately under the name of the Canadian Fairbanks Co., of which Henry J. Fuller, the Montreal manager, is president.

The distinctively western history of this firm is short, but it has been one of substantial and steady progress. Fairbanks scales and the general mill and machinery supplies of the company have been pushed energetically in the west.

Metallic Roofing Co.

At the corner of Notre Dame avenue and Monkman street the Metallic Roofing Co., of Toronto, are erecting a large warehouse and factory. It is their intention to manufacture in Winnipeg their most bulky goods, such as fire-proof glass windows, metallic cornices and sky lights, and a full stock of other lines manufactured in Toronto will be carried in Winnipeg. G. J. S. Morrison will be in charge of the western business.

Tilden, Gurney & Co., Limited.

As their name implies, Tilden, Gurney & Co., Limited, are an offshoot of the Gurney-Tilden Co., Limited, of Hamilton, Ont. As early as 1875 this Hamilton firm were shipping stoves and ranges from their home foundry to the western trade, and in 1879 they opened a branch here under the firm name of E. & C. Gurney & Co. Later the western business was incorporated as Tilden, Gurney & Co., Limited. For 23 years it has been under the management of I. Walter Martin, who has been connected with the Gurney business for 30 years.

In 1880 a warehouse was erected on the same street on which the present building is located. In 1895 a four storey building with a basement was erected, and this season two storeys are being added.

If Winnipeg ever secures the boon of reasonably cheap power there can be no doubt that this firm, like many others, will establish in Winnipeg a separate plant for the manufacture of stoves and ranges for the western trade. In the meantime a heavy stock is carried in the west.

Northern Iron Works.

This is a comparatively new addition to the list of Winnipeg's foundries, but under the capable management of enterprising young men it is making a place for itself in spite of a disastrous fire in the Fall of 1903, which brought temporary disaster to the business.

Wm. Buck Stove Co., Limited.

This eastern house have a branch in Winnipeg at 246 McDermott avenue. It is under the management of W. G. McMahon. The western country offers a splendid market for the stove manufacturer, and the Wm. Buck Stove Co. seem to be getting their share.

James Stuart Electric Co.

This is a new electrical supply house recently organized by James Stuart, of the Stuart Machinery Co., Limited. Premises have been bought from the Miller-Morse Hardware Co., on Princess street, and the firm are installed in part of the old warehouse formerly occupied by Miller, Morse & Co. A large stock is carried and the new firm seems to have a bright future in store.

G. E. Griffith & Co.

A new plumbing supply house has recently been opened in Winnipeg under the name of G. E. Griffith & Co. Premises have been secured at 199 Main street in the old location of R. J. Nott, plumber and steamfitter. The new firm handle the goods of H. R. Ives & Co., Montreal; the Canada Radiator Co., and the Amherst Foundry Co. This is a strong line of agencies, and as in addition they will handle general plumbers' supplies, the firm should soon develop a good trade in the west.

They are represented on the road by F. S. Murdoch, a popular traveler who was connected for a number of years with the James Robertson Co., and later with the Canada Paint Co.

The Great West Wire Fence Co., Ltd.

The Great West Wire Fence Co., Limited, have recently been incorporated and they are commencing the manufacture of fencing in Winnipeg. They are sole owners in Canada of the Rankin patent wire lock, and are therefore in a position to manufacture a superior line of fencing. The principal shareholder is Thomas Black, and associated with him is Wm. Andrews, who is general manager of the business. The firm are located on Lombard street.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Great West Wire Fence.

A HANDSOME catalogue has recently been issued by the Great West Wire Fence Co., Limited, of Winnipeg, illustrating the line of fencing which they have commenced to manufacture in Winnipeg. In the introduction the firm state that they feel they "are fortunate in entering the market at a time when both railways and farmers recognize the value of a strong and lasting fence, to replace others of a lighter and less durable make of web fencing." They announce that they have purchased all rights for the Dominion of Canada of the "Rankin Wire Lock," and are placing on the market a new field-erected wire fence. The introduction draws attention to the clamp, or lock, as the particularly attractive feature of the fence—a distinctive feature for a field-erected fence. "These clamps are made of No. 9 gauge hard-steel wire, and make an absolute lock, are easy to put on, and being galvanized will not rust. The life of lock and fence is consequently the same—this is a strong point."

The Great West Wire Fence Co. are appointing hardware merchants in the different western towns as their agents, and hardware dealers who are open for an agency would do well to get a catalogue and inspect the new fence.

New Canvas Canoe.

R. Chestnut & Sons, the well-known hardware merchants of Frederickton, N.B., have started a new industry in connection with their business in the shape of a new canvas canoe, which they claim is the only one of its kind made in Canada. Its principle feature is that it is non-leakable, and can be left out of the water any length of time without any fear of it spreading or leaking. It is wider than the ordinary canoe, and is built more for pleasure trips. The factory is already working night and day filling orders, as there has been a big demand for these canoes. The makers are looking for agents in all parts of Canada, and a catalogue will be sent to anyone interested.

A Magnificent Volume.

"History of the Bolt and Nut Industry of America" is the title of an interesting and comprehensive volume pertaining to this important branch of manufacture recently issued. The author is W. R. Wilbur, of Cleveland, Ohio, by whom the book is dedicated to Isaac P. Lamson, president of the Lamson & Sessions Co., of Cleveland, whose desire that the annals of the bolt and nut industry in this country should be carefully collected and preserved was the chief motive that inspired the publication of the book. Acknowledgment is also made of the assistance generously given in the compilation by many prominently identified with the business. The book contains more than 400 pages, and is bound in stiff covers with leather backs and corners. It is embellished with 51 illustrations, principally portraits of the leaders and pioneers in the industry. The frontispiece is a view of the first bolt factory in America, that of Rugg & Barnes, Marion, Conn., which business was established in 1840, the plant being 20 x 30 feet in dimensions. The book closes with a general summary giving briefly in chronological order the various important developments of the business, such as issuance of patents, new machinery, standardization of threads, etc., a list of manufacturers in this field being also given. The volume is an exceedingly creditable one, and is a valuable contribution to the literature of this branch of the trade.

The Greatest Profit Can be Made

from your Paint Department if you watch every avenue of possible trade.

THE SHERWIN-WILLIAMS BUGGY PAINT

is a paint specialty that meets the popular demand for a durable gloss paint for outside exposure. It is a trade-winner.

S-W. Buggy Paint was first made for painting buggies, carriages, etc.; but it proved so good for outside wear, where a varnish gloss paint of great durability was wanted, that it is now used extensively for porch, lawn, and other outdoor furniture.

A good demand exists for it among livery stables in your neighborhood. It is fine for touching up carriages, surreys, phaetons, etc.—keeps them looking well at small cost.

S-W. Buggy Paint is a good profit maker that you should have on your shelves. Write for prices and color cards today.

Helps in Selling.

With all their customary enterprise and logical insight, the J. D. Warren Mfg. Co., Masonic Temple, Chicago, Ill., have gotten out a very practical, interesting booklet containing description and illustrations of the various uses to which the Warren sectional shelving can be put. In the preface they ask the very pertinent question: "Why should not as efficient helps be provided for the hardware merchant to take care of and sell his goods as to buy them?" This booklet containing this and other very valuable information for every hardware dealer, will be forwarded to the trade upon application. When writing mention Hardware and Metal.

A Handsome Series.

The Canadian Rubber Co., of Montreal, Limited, have issued some handsome catalogues during the past few weeks

Catalogue "C" deals comprehensively with interlocking rubber tiling, and other unique rubber floor coverings. This catalogue is printed in several colors, and all the illustrations are in half-tone. As a departmental catalogue, illustrating a very special line of goods, this publication is said to be the finest issued by any rubber company in Canada or the United States.

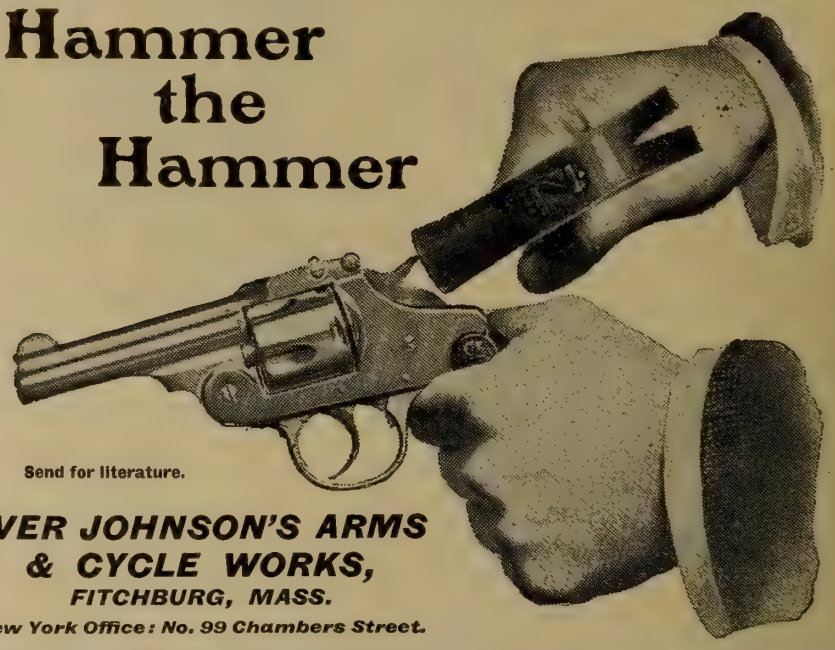
Catalogue "D" is devoted exclusively to rubber belting and rubber covered rolls. This book comprises 90 pages, with a handsome embossed cover in gold and black. A mass of valuable information concerning the care and use of rubber belting has been inserted, and the illustrations, of which there are a great number, are all in half-tone. This belting catalogue will no doubt be keenly sought after by the trade. As a reference book on everything pertaining to the care and use of rubber belting under

all conditions, catalogue "D" is one of the most complete we have yet seen, and is a striking testimonial of the up-to-dateness of the company.

Catalogue "E" (60 pages with handsome embossed cover) comprises the principal lines of rubber and special hose manufactured. Much valuable information is given as to the care of hose, and many half-tone illustrations are shown to illustrate the text. This particular catalogue is in keeping with the other high-grade trade catalogues.

The complete series of handsome catalogues is concrete evidence of the progress made by the rubber industry in the Dominion. Any of the catalogues issued can be obtained from the sales branches of the company throughout Canada, or direct from the head office, Montreal.

Lumbering Tools.



Pink Lumbering Tools are advantageously illustrated and described in a well-gotten up catalogue of 44 pages just sent us by Thomas Pink, Pembroke, Ont. Pink peaveys, cant hooks, pike poles, handspikes, etc., are shown in considerable variety, while piling hooks, boom hooks, chains, loading blocks, and every sort of lumbering tools are listed and their construction explained. The catalogue cover is typical of the lumbering industry, and the book is, on the whole, one which every hardware dealer in lumbering districts should have on his desk. Mention Hardware and Metal if you write for a copy.

There are **HAMMERS** *that "Knock," and there are* **HAMMERS** *that convince. We employ the convincing kind; for instance, we say contact with the Hammer will not discharge an*

IVER JOHNSON REVOLVER

And then we use our **HAMMER** *just to demonstrate the truth of our assertion. We call this a convincing argument, not "Knocking."*

PIG IRON BOOM IN GERMANY.

IT is reported from Berlin that there is no mistaking the boom in pig iron at present throughout Germany, but particularly so in the Silesian district. The demand for pig iron in Upper Silesia is constantly increasing, and is running especially on steel and foundry supplies. It is noticed that speculation secures but little interest, for practically all shipments are going directly to consumers. The output is sold out up to the end of the year, and many orders have been booked for the first quarter of next year. Many furnaces which have been on the market as sellers for several years, have withdrawn, as they require the whole production now for their own steel mills, and are even buying iron in fair quantities.

A POLICY OF DRIFT.

THE long expected and anxiously awaited budget has at last made its appearance, and the hopes of many long-suffering manufacturers are again dashed to the ground. It was believed that the Government had at last awakened to the urgent necessity of protecting some of our industries against the unfair and unequal competition that has been gradually ousting them from the market, and it was reported in the public prints that the forthcoming budget would remedy not a few of the existing grievances. But it is apparent that Mr. Fielding has failed to appreciate the true state of matters. He has chosen the inglorious expedient of referring the matter to a committee of inquiry, which means that nothing will be done till Parliament meets next year.

The binder twine manufacturers have special reason to be dissatisfied with this neglect. They are fighting under the most adverse conditions against the machinations of a colossal and unscrupulous trust, whose avowed object is to drive every Canadian binder twine factory out of business, and already half a dozen factories have closed down after a brave but futile struggle to meet the ruinous prices of the American trust. The facts are plain and well known to Mr. Fielding, and no inquiry is necessary.

This is a case in which the interests of the farmer and the manufacturer are identical, for the farmer will in the long run be the principal sufferer from the creation of a monopoly in binder twine. Moreover, that monopoly, once gained, will be engineered to create other monopolies—monopolies in self-binders, in seeders and the other agricultural implements manufactured by the International Harvest Trust—and heavy indeed will be the burden of the farmer if that comes to pass. The Government would be alienating no class of its supporters by imposing a moderate duty on imported twine, and that they have failed to do so argues either a callous indifference to the interests of our manufacturers or an indecision of mind that would discredit an ordinary business man.

BATTY CO MOVE.

The Batty Stove & Hardware Co., of Toronto, have removed from 76 York street to their new office and wareroom 182 Adelaide street west, where Mr. Batty, manager of the firm, has gone to great expense in having it specially adapted to their line of business. A basement extending the full length of the building is used as storeroom for stoves, tilings, etc. The office is located on the front part of the main floor, the rear of which is used as a storeroom for Jewel stoves and castings, of which this firm carries a complete line and sell to the trade only.

The Batty Co. are probably best known to readers of Hardware and Metal as dealers in mantels, the whole of the second floor being given over as a showroom for these goods, being very tastefully and attractively arranged. In all there are ten thousand square feet of floor space. An electric elevator connects the four floors. The building is so well lighted throughout that the goods are shown off perfectly, a point which all hardwaremen will appreciate, as goods well displayed are half sold.

Hardware and Metal hopes that in a few years this enterprising firm will find these premises too small for their business. As the adjoining building is owned by the firm it will be a very easy matter when such time arrives to obtain double the amount of floor space.

BUILDING AND CONSTRUCTION

HOW TO USE CEMENT.

THE following general rules referring to the practical use of cement will be found convenient for reference :

Quality of Sand.—The sand should be clean, sharp and coarse. When the sand is mixed with loam, the mortar will set comparatively slow, and the work will be comparatively weak. Fine sand, and especially water-worn sand, delays the setting of the cement, and deteriorates strength. Damp sand should not be mixed with dry cement, but the cement and sand should be mixed thoroughly and uniformly together, when both are dry, and no water should be applied until immediately before the mortar is wanted for use.

Proportion of Sand.—The larger the proportion of cement the stronger the work. One part of good cement to two parts sand is allowable for ordinary work; but for cisterns, cellars, and work requiring special care, half and half is the better proportion. For floors, the cement should be increased toward the surface.

Water in Concrete.—Use no more water in cement than absolutely necessary. Cement requires but a very small quantity of water in crystalizing. Merely dampening the material gives the best results. Any water in excess necessarily evaporates and leaves the hardened cement comparatively weak and porous.

Concrete in Water.—Whenever concrete is used under water, care must be taken that the water is still. So say all English and American authorities. In laying cellar floors, or constructing cisterns or similar work, care must also be taken to avoid pressure of exterior water. Cement will not crystalize when disturbed by the force of currents, or pressure of water, but will resist currents and pressure after hardening only. In still water, good cement will harden quicker than in air, and when kept in water will be stronger than when kept in air. Cements which harden especially quick in air are usually slow or worthless in water.

How to Put Down Concrete.—When strong work is wanted, for cellar floors and all similar work, the concrete should be dampened and tamped down to place, with the back of a spade, or better, with the end of a plank or rammer; then finished off with a trowel, thus leveling and compacting the work. Only persons ignorant of the business will lay a floor or walk with soft cement mortar. All artificial stone is made in a similar way to that described, and, when set, is strong and hard as stone.

Delay in Use.—Do not permit the mortar to exhaust its setting properties by delaying its use when ready. Inferior cements only will remain standing in the mortar-bed any length of time without serious injury.

Stone and Brick Work.—In buildings constructed of stone or brick, the best protection from dampness and decay, and also from the danger of cyclones, is a mortar of cement and coarse sand. The extra cost is inconsiderable, and the increased value of the structure very great. Chimneys laid in this manner never blow down, and cellars, whose foundations are thus laid are always free from atmospheric moisture. Cement may also be mixed with lime mortar for plastering and other purposes, to great advantages.

Effect of Frost and Cold.—At temperature less than 60 degrees Fahrenheit, all good cement sets slowly, though surely, but if allowed to freeze its value is seriously impaired. In cold weather or cold water do not fear to wait for your concrete to crystalize.

Damage from Moisture.—Good cement is not injured by age, if carefully preserved from moisture. Lumps in bags or barrels of cement are caused by exposure to moisture. They prove the originally good quality of the cement.

MACHINE BRICKLAYER.

P. H. LOUD, of Williston, S.C., has invented a brick-laying machine that will revolutionize the art of building, in addition to cheapening the cost of construction and the time necessary for the erection of brick structures.

It is claimed by those who have seen the machine that it will lay brick with all the skill of the most accomplished bricklayer, with perfect accuracy and with a rapidity that discounts the human hands. The report is to the effect that with two or three men operating the machine, supplying it with bricks and mortar, it will do the work of a dozen bricklayers in the course of a day, carrying up a wall as if by magic.

It is further claimed that the machine can be easily and quickly regulated so as to skip wherever it is desired to leave doors and windows, doing this work with seeming human intelligence. It is also said that the machine is not complicated, will not easily get out of order, and is in every way a practical and useful invention, sure to come into general use by contractors.

BUILDING NOTES.

Owen Sound is to have a new post office.

A $30.000 school is to be erected at Virden, Man.

H. Mitchell, butcher, is to build a new store at Mortlach, Assa.

Messrs. Calhoun & Ferguson will build a large hotel at Edmonton.

The Cockshutt Plow Co. will build a three-storey building at Regina.

The A. K. Melbourne Co. are erecting a $6,000 warehouse at Hamilton.

W. G. Breckon and W. E. Fraleigh will build stores at Fort Frances.

W. S. Sandhoff, of Oxbow, Man., will build an $18,000 hotel at Estevan.

The Penman Mfg. Co., Paris, are to erect a large five-storey warehouse.

The Weyburn Cement Brick & Block Co., Weyburn, have been incorporated.

Rasmusson's new hardware store at Quill Lake, Sask., is nearly completed.

J. B. Mack, Prince Albert, has secured a site for a grist mill at Vonda, Sask.

Central Congregational Church, Winnipeg, is to be altered at a cost of $26,000.

The corner stone of a new Roman Catholic church, to cost $20,000, has been laid.

The Edmonton Tent & Mattress Co., Edmonton, will erect a brick block in that town.

V. W. Horwood, Winnipeg, is the architect for a new $4,500 residence at Riverview.

T. R. Vardon, MacGregor, invites tenders for the erection of a municipal hall, 34 x 24 feet.

The Canadian Northern Railway Co. will erect a station and freight sheds at Prince Albert.

Geo. Miller, Oakbank, will receive tenders for the erection of a municipal office building.

An asylum is to be erected at Sydney River, N.S. The architect is R. B. Whitten, Sydney.

Cotter Bros. and Mrs. Geo. Mitchell are to erect a business block on Fort street, Winnipeg.

The Lake of the Woods Milling Co. will erect an elevator at Victoria Harbor, near Midland.

The Brackman-Ker Milling Co. will erect a warehouse and wharf at New Westminster, B.C.

The Chatham, Wallaceburg & Lake Erie Electric Railway Co. will erect a large power house.

W. P. Bate, Saskatoon, will receive tenders for the erection of a new post office building there.

F. Fitzgerald and H. Bowen, Edmonton, will erect a theatre building at a cost of about $20,000.

The Town of Sussex, N.B., has decided to erect a new school building at a cost of about $25,000.

Vachon Bros., New Westminster, are to erect another business block on Granville street, Vancouver.

The Intercolonial Railway are constructing a station and freight shed at McIntyre's Lake, N.S.

The British Columbia Telephone Co., Victoria, will erect a three-storey central exchange building.

W. T. Williams has prepared plans for the erection of a new town hall at Medicine Hat, to cost $30,000.

T. J. Hepburn, architect, Stratford, has the erection of a curling rink in that city under his charge.

A fine new Masonic Temple is to be built at Sydney, N.S. It will be three storeys in height and 38 x 80 feet.

The Western Canada Flour Mills Co. have advertised for tenders for a six-storey mill structure at Winnipeg.

The Commonwealth block at Winnipeg will be enlarged at a cost of $50,000. Forty new offices will be provided.

J. S. Aikins and G. A. Mutlebury will erect a two-storey apartment block at Fort Rouge, at a cost of $30,000.

James Ryan is to build a $22,000 apartment house at Winnipeg. A hot water heating system will be installed.

Metallic ceilings are being installed in

WILKINSON SWORD CO., LONDON, ENG.

the legislative buildings at Winnipeg in every room where they are not yet in use.

Messrs. Ross & Howard, Vancouver, wil, shortly commence work on the erection of a large business block in that city.

John Franski has secured the contract to build a cement block church for the Baptists of Emerson, Man., the cost to be $6,500.

The Toronto & Niagara Power Co. are to build three power stations at Stoney Creek, Twenty-mile Creek, and Clarkson's, Ont.

The Canadian Steel Goods Co. are advertising for tenders for their cement and frame factory, to be erected on Arthur street, Hamilton.

J. H. G. Russell, architect, Winnipeg, is inviting tenders for the erection of a five-storey warehouse for Messrs. Scott, Bathgate & Co., that city.

James McDiarmid, Winnipeg, will shortly call for tenders for a new church building to cost $18,000, for the Point Douglas Presbyterians.

H. Hoffmeister is to erect a $2,200 residence on Granville street, Vancouver, and John Wickhem a $2,500 house on Gore avenue, in the same city.

A. C. Patch, Winnipeg, has secured the contract for the addition to the Hudson's Bay Co.'s stores at Fort William, the cost being $20,000.

Messrs. J. S. Mitchell & Co., Sherbrooke, Que., have purchased a stock of nearly 1,000 squares of steel shingles from the Pedlar People, Oshawa.

Hamilton Orangemen have commissioned Messrs. Stewart & Wilton, architects, to build a three-storey building and meeting hall, to cost $18,000.

The Dey-Manson Building & Construction Co. have been awarded the contract for the erection of a warehouse for the Moline Plow Co., at Winnipeg.

The new building to be erected at Victoria, B.C., by Oscar Promas, of San Jose, Cal., is to contain two stores and will be 45 x 140 feet, two storeys high.

The contract for the big storage reservoir to be constructed in connection with the Winnipeg waterworks has been let to the Toronto Contracting & Paving Co., for $69,771.

The new Methodist church at Shawbridge, Quebec, has been fitted out with a new steel ceiling. Other improvements were made and the building now presents a very nice appearance.

The Carlyle, N.W.T., school board, has let the contract for the building of a four-roomed school for $8,790. This, with heating and ventilating fixtures, will make a $10,000 building.

J. B. Dagainas, of Montreal, has completed the installation of the Pedlar Perfect Steel Lathing in the new Memorial Building which is being erected on Sherbrooke street of the same city.

Dr. W. A. Molson, Montreal, will build an $18,000 structure at 854½ Sherbrooke street, the house being built of stone and being a three-storey dwelling. It will be forty feet by sixty-five feet in dimensions.

F. R. Evans, architect, Winnipeg, will receive tenders for the erection of a five-storey warehouse for Messrs, Foley, Lock & Larson; also for the erection of a three-storey business block, 112 x 70 feet, for M. and L. Orris.

The Vancouver Construction Co. have secured a five years' contract for the supply of crushed rock to the City of Vancouver. The same firm are also constructing the new Canadian Pacific Railway wharves at Victoria, B.C.

Mr. Frank Peden, architect of the Bank of Montreal, is erecting a new residence at Montreal Junction. The new building, which is large, is being constructed on a fire-proof basis. The exterior walls are being built of cement, reinforced with Pedlar's lathing.

The Wm. Weld Co., Limited, and Mr. F. C. Bell, are to erect a $40,000 four-storey office building in Winnipeg, and the former company will likely instal a heating and power plant. The Weld Co. publishes the Farmers' Advocate, with head offices at London.

The Weber Co., Chicago, has charge of the construction of a steel concrete chimney for the new electric light station at Sydney, N.S. The chimney will be about 125 feet high and cost about $3,000. It is the first of its class to be erected in the lower provinces.

The Canadian Pacific Railway Co. intend to erect large elevators at Victoria Harbor, their newly selected terminus on the great lakes, from which point there will be all-rail transportation to Montreal. The new route will save 150 miles of rail haulage compared with Owen Sound.

The erection of the dairy and science building, power house and principal's residence in connection with the Manitoba Agricultural College, will be proceeded with at once, the contract having been given to George A. Mitchell, of Winnipeg. The total cost of the contract is between $56,000 and $57,000.

TORONTO BUILDING PERMITS.

Permits aggregating in value $176,000 were issued in Toronto from July 5 to 8, as follows :

W. G. Cooper, brick dwelling, Hogarth avenue, $2,200.

John Douglas, brick office, 1275 Queen street west, $2,000.

Hon. Melvin-Jones, brick stable, Lowther avenue, $5,000.

G. A. Hayden, roughcast dwelling, 149 Victor avenue, $1,500.

Dr. Charles O'Reilly, brick residence, College street, $5,000.

James Finlay, roughcast dwelling, 20 Millicent street, $1,800.

S. Sneath, store and dwelling, 381 Broadview avenue, $3,500.

Howard Ayre, brick and stone dwelling, Victor avenue, $3,500.

Hon. J. J. McLaren, brick dwelling, Roxborough avenue, $7,000.

John Adair, store and dwelling, 320 Queen street west, $6.000.

Jennie Preston, one pair brick dwellings, Booth avenue, $3,000.

Robert Greig, brick dwelling, 20 Chestnut Park road, $12.000.

H. F. Squires, one pair brick dwellings, Markham street, $4,400.

William Smith, brick and stone dwelling, Gladstone avenue, $2,000.

Hon. S. H. Blake, alterations to dwelling, Maple avenue, $3,400.

A. O. Beardmore, brick and stone stable, St. George street, $3,000.

Alfred E. Sawtell, one pair brick dwellings, Howland avenue, $4,500.

Board of Education, addition to school, Cottingham street, $21,000.

Sisters of Charity, boiler house and laundry, West Lodge avenue, $15,000.

Robert Darling Co., warehouse, corner Adelaide and Sheppard streets, $37,000.

Charles Hanrahan, one pair brick veneer dwellings, Gore Vale avenue, $4,000.

S. Lanskail, two stone and brick dwellings, 3 and 5 Pine Hill road, $7,200.

A. C. Stanner, store and dwelling, 1200 and 1202 Queen street west, $7,000.

A. P. Walker and J. C. Kemp, one pair brick dwellings, Rusholme road, $6,000.

York County Loan & Savings Co., three stores, Roncesvalles and Wright avenues, $5,000.

William Henderson, roughcast store and dwelling, corner Wallace and Lansdowne avenues, $1,800.

"Complete Illumination with Daylight"

is quite a different effect to the results obtained by polished mirrors and various reflecting surfaces.

MAXIMUM LIGHT GLASS

produces a nearly uniform diffusion of white light in the room. All the daylight is gathered and utilized. There is a complete absence of glare, an elimination of shadow, and all streakiness of effect is avoided. Write us for samples so that you can see the value of getting in touch with builders, etc.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE Cape Breton Coal, Iron, and Railway Co. are seeking concessions from the City of Sydney with a view of establishing in Canada a branch of the Armstrong Arms Works, of England, shipping piers for their Broughton collieries, and other works, involving a $20,000,000 expenditure. Besides exemption from taxation and water privileges, they ask for the transfer to them of Victoria Park, and Imperial Government property on harbor front. Most of the directors of the company are also directors of the Armstrong works.

Swift & Co., Chicago, will erect a $200,000 plant at Vancouver.

The Montreal Steel Works Co. have purchased a site and will extend their works.

Drilling for oil will be recommenced by the Nova Scotia Oil & Gas Co., at Pansboro, N.S.

The Canadian Westinghouse Co. have prepared plans for doubling the size of their foundry at Hamilton.

J. A. Gardiner, Barrington, N.S., is to establish a marine iron works at North Vancouver, alongside the Wallace shipyards.

The Winnipeg gas plant is now in operation, the buildings having been built by the Manitoba Construction Co., at a cost of $140,000.

The John Inglis Co., Toronto, have been awarded the contract for the installation of three new boilers at the water works at Brantford, Ont.

The ratepayers of Perth, Ont., have voted favorably on a by-law granting $25,000 to H. K. Wampole & Co., of Philadelphia, Pa., for the erection of a factory for the manufacture of milk sugar, etc.

The oil boom at Leamington, Ont., is over, and the industry is settling down to its real worth. The production runs nearly 20,000 barrels per month, and the large companies are buying all that is produced.

The Town of Strathcona, Alta., are installing a 120,000 gallon steel tank, to be erected on an 80-foot steel tower, for their new water works system. The Ontario Wind Engine & Pump Co. supply the tank and tower, the cost being about $10,000.

The Climax Good Roads Machinery Co., Marathon, N.Y., has asked the council of Peterborough what inducements it could promise the company to establish works there. Besides road machinery, structural steel shapes would be manufactured.

The Jenckes Machine Co. do not intend moving their main shops from Sherbrooke, Que., but will merely establish a branch in St. Catharines. The terms of the bonus granting the Jenckes Co. assistance by the City of Sherbrooke do not expire for fifteen years yet.

The British Columbia Wire & Nail Co., Vancouver, B.C., have purchased 20 nail machines to make one-half to six-inch nails; also a drawing bench. The firm also bought a machine shop outfit and a staple machine. They are now erecting large factory buildings which will have a capacity for turning out 10 to 20 tons of nails per day.

The extension of the Pender Nail Works at St. John will be larger than the whole of the present plant. The addition will include a new machine room 48 x 40, a new wire mill 60 x 100 and a new cleaning house 46 x 78. Among other improvements the cleaning house will have an improved five-alley baker, which will have a number of improvements not found in other mills.

Companies Incorporated.

The Boundary Iron Works have been incorporated at Victoria, B.C., to carry on a general foundry business.

The Canada Wire & Nail Co., Sydney, N.S., have been organized with a capital of $200,000. J. E. Burchell, Sydney, is interested.

The Raymond Mfg. Co., of Guelph, Limited, has been granted power to increase their capital stock from $130,000 to $250,000.

The Hickey Oil Co., of Arizona, has been licensed to do business in Ontario. H. F. Slater, of Leamington, is the company's attorney.

The Pollock Mines Co., Yale, B.C., have been incorporated with a capital of $1,000,000, to carry on a mining, smelting and refining business.

The South Bay Oil Co., of Ohio, has been licensed to develop oil property in Ontario. G. G. Moncrieff, of Petrolea, is the company's attorney.

The New Ontario Iron Co., of Maine, has been licensed to develop mining property in Ontario. Clara Brett Martin, Toronto, is the company's attorney.

Concrete Steel & Tile Construction Co., of Michigan, has been licensed to do construction business in Ontario. Gus Kahn, Toronto, is the company's attorney.

R. Scott & Son, Limited, Galt, share capital $100,000; purpose, to manufacture wooden work for wagons, etc. The directors are: R. Scott, E. Scott, and E. Scott, all of Galt.

Western Canada Cement & Coal Co., Limited, Ottawa, share capital $1,250,000; purpose, to manufacture cement and building materials. The directors are: A. F. MacLaren, W. A. Fleming, C. A. Irvine, J. Lavelle and S. F. Bell, all of Ottawa.

Toronto Welsbach Light Co., Toronto, share capital $50,000; purpose, to manufacture lighting apparatus. The directors are: J. G. Lohrman, of Elkhart, Ind.; J. R. Adamson, J. Fleck, F. J. P. Gibson, and G. C. Arnott, all of Toronto.

Osborne Oil Producers, Limited, Petrolea, share capital $100,000; purpose, to develop oil wells and gas lands. The directors are: J. Armstrong, Owen Sound; W. McIntosh, Petrolea; Peter Ryan, J. A. McIntosh and D. Urquhart, all of Toronto.

Johnston Oil Engine Co., Limited, Toronto, share capital $250,000; purpose, to manufacture engines and motors. The directors are: H. A. Johnston, A. M. Wickens, O. Jull, C. M. Watts, all of Toronto, and W. F. Johnston, of Ingersoll.

Monarch Brass Mfg. Co., Limited, Port Colborne, share capital $100,000; purpose, to manufacture brass goods, plumbers' supplies, etc. The directors are: C. A. Masten, J. R. L. Starr, J. H. Spence, S. Whittaker and L. M. Heal, all of Toronto.

Concrete Pole Co., Limited, St. Catharines, share capital $100,000; purpose, to manufacture concrete poles and other materials. The directors are: J. Jennings, H. L. M. Weller, of Toronto; E. J. Odlum, H. H. Collier and J. B. Burson, all of St. Catharines.

General Explosives Co., of Montreal, Limited, share capital $20,000; purpose, to manufacture explosives of every description. The directors are: R. L. Dillon, Montreal; J. McMartin, Cornwall; E. A. Lesaeur, N. W. Drummond, and J. F. Orde, all of Ottawa.

Sur-Coat Mfg. Co., Limited, Windsor, share capital $10,000; purpose, to manufacture chemical compounds for preserving metals and other plumbers' supplies. The directors are: C. T. Askin, Windsor; T. Hurley, J. T. Hurley, D. M. Hurley and J. H. Walsh, all of Detroit.

Ontario Gas & Fuel Co., Limited, Hamilton, share capital $100,000; purpose, to develop natural gas property. The directors are: F. M. Lowry, J. C. McDowell, of Pittsburg, Pa.; W. A. Spratt, of Hamilton,; W. J. Aikins, of Dunnville, and C. A. McGara, of Dundas.

Corrogated Concrete Pile Co., of Canada, Limited, Montreal, share capital $50,000; purpose, to do construction work. The directors are: V. E. Mitchell, D. Armour, A. C. Cascrain, C. M. Cottom, S. Lehuray K. J. Beardwood, and L. L. Legault, all of Montreal.

Ingersoll Nut Co., Limited, Ingersoll, share capital $25,000; purpose, to carry on business as engineers, machinists, founders, bolt, screw and nut makers, etc. The directors are: J. A. Coulter, Ingersoll; W. H. Shapley, Toronto; F. H. Deacon, Milton; O. E. Robinson, Ingersoll, and W. R. Wortman, London.

The Maritime Art Glass Works, Limited, St. John, N.B., have been incorporated with a capital of $25,000, to acquire the business of the Maritime Art Glass Works, and to manufacture mirror plate, prism lights, etc. The provisional directors include Archibald Bauer, W. C. Bauer, and J. A. Bauer, St. John.

Western Counties Electric Co., Limited, Brantford, share capital $500,000; purpose, to manufacture and sell electric power. The directors are: S. F. McKinnon, J. N. Shenstone, C. G. Harstone, all of Toronto; J. Knox and C. S. Scott, of Hamilton; H. Barber, Toronto, and A. T. Duncan, of St. Catharines.

The Canadian Fairbanks Co., Limited, has been granted power to increase their capital stock from $500,000 to $650,000. Kaministiquia Power Co., Limited, Fort William, share capital $2,000,000; purpose, to develop electric power for heating and lighting. The directors are: H. F. Holt, C. R. Hosmer, F. W. Thompson, H. W. Notron, all of Montreal, and F. H. Phippen, of Winnipeg.

No. 13. OSHAWA, ONT. JULY 15, 1905

FIRE!

When a Hardware Merchant sees a pile of wood lath in front of a house in course of construction, two thoughts naturally arise in his mind. The first is that the house is a "Fire Trap" and dangerous to live in, and the second, that he is missing a chance to make a profit by selling **Pedlar's "Perfect" Lath** for that purpose. Why not use the first thought to work out a successful result for the second? Go to the owner of the house and tell him that the time is now at hand when tenants will refuse to live in houses plastered in Wood Lath, and that common sense dictates a change before the plastering is done.

THE SERVANT

The mortar used in plastering houses (especially the patent plasters) is fire-proof, and if held in place on the walls and ceilings would keep the flames in check until water could be applied, but if spread on Wood Lath it will drop as soon as touched by the heat, leaving the inflammable Wood Lath exposed to quick combustion. If the water is spread on **Pedlar's "Perfect" Lath** no amount of heat it is likely to be subjected to will loosen its hold on the Metal Lath, insuring the retention of the mortar as a fire protector, besides the great safety in the use of Metal Lath as a substitute for Wood Lath.

THE MASTER

The greatest wonder in the world is the custom of using Wood Lath as a device for holding mortar in place on walls and ceilings of houses for human habitation and occupation. This custom originated in early days when wood was cheap and no substitute was available, regardless of the fact that every house so constructed is liable at any moment to burn with such rapidity (through the extreme inflammability of the Wood Lath) that the death of one or more of the occupants is a frequent result. The time has come to stop this wholesale slaughter by using **Pedlar's "Perfect" Lath,** made of steel, which, when covered by the mortar is an effectual obstacle to the spread of flames. A postcard to us will secure facts and figures.

THE STOVE TRADE.

WHILE this is the off season in the stove trade, manufacturers report an unexpected activity in the demand for all classes of goods. It could not be expected that farmers or townspeople would be placing orders for stoves or ranges at present, yet the movement of this class of goods is much greater than usual at this season of the year. The influx of population and the activity in building circles offers a partial explanation.

In the cities and towns, as well as in the country districts, an excellent business is being done in gas and gasoline stoves. The saving in fuel and the absence of discomfort from unnecessary heat are two strong features which commend themselves to all classes. Retailers who do business near Summer resorts or where there is much camping are selling many two and three-burner gasoline stoves for camp use. Oil stoves are also selling well for the same purpose. In the cities where gas is to be had the demand is large for hot plates and everything up to ranges.

Peddlers are active in some sections, and will endeavor to sell many ranges in the Fall, especially if crops are good. An energetic advertising campaign in the local newspapers, and by circulars and personal letters, will do much to head off the securing of business by these itinerant vendors. Catalogue house competition can also be met by duplicating the offers made by the departmentals and drawing attention to the fact that when stoves are bought from the home merchant he is always there to see that the goods give satisfaction.

COMPETITION IN SHOVELS.

ONLY a small part of the spades and shovels used in Canada are imported from Great Britain, the United States and other countries, the value of the imports being about $35,000 to $40,000 yearly, for the nine months ending March 30 having been about $25,000. The Canadian demand has been well supplied in the past by the plants already in operation, and while the demand is steadily increasing, owing to the large amount of railway construction and development work, two new plants at Peterboro and Hamilton will soon be producing.

Jobbers are speculating as to the probable effect the entry of the new manufacturers will have on the market. In the past, prices have been well maintained and price-cutting has been an absent evil. It is feared, however, that with the additional plants in operation there will be an overproduction, the result being that if jobbers are unable to buy the output, the manufacturers will endeavor to unload upon the retailers, the profits of the jobber being eliminated and the maintenance of the retailers' prices being endangered. Are these fears well grounded?

A healthy competition is desirable at all times, but all branches of the trade suffer from conditions which encourage price-cutting.

AN ENCOURAGING OUTLOOK.

ASK manufacturers or jobbers what the outlook for the Fall is and in most cases the reply will be, "It depends upon the crops." There is much in this view, and it applies to the makers and sellers of stoves as much as to any other section of the trade.

Reports from the west give encouraging news regarding the prospects of a splendid crop, one estimate being that 100,000,000 bush. will be produced while a more conservative estimate is that 70,000,000 bush. of wheat will be harvested, a total of 15,000,000 more than last year. Other provinces promise good crops also, and no sections of trade dependent upon the agricultural community have no reason to feel downhearted.

In the American metal trades the first half of 1905 was one of the most remarkable periods in the history of the trade. Production surpassed all previous half year records, Canada participating in the general activity. While few hope that the last half of the year will duplicate the first, and there are few who would not be satisfied with a falling off, there seems to be little reason to expect much of a decline, as the actual production now is as great as at the beginning of the year. Mills and furnaces may not be booked so far ahead but the rate of consumption is as heavy as six months ago. The situation is remarkable and basing the future upon the past, the prospects are that the records for 1905 will show the highest figures yet recorded. Owing to the condition of trade it is unlikely that any lengthy suspensions of plants will take place during the Summer months.

With such a satisfactory condition in both field and factory, there is no reason why the retail trade should anticipate anything but a continuance of the era of prosperity Canada is enjoying. While clouds may darken the horizon in some directions the warmth of the sunshine of Canada's growing time should be felt and enjoyed by all participating in the mercantile development of the country.

TWO NATIONAL HOLIDAYS.

AS usual, Winnipeg saw this year the celebration of two national holidays, Dominion Day and the Fourth of July. The American Association in Winnipeg is a well organized body, and it held a very successful celebration in Elm Park. In many respects the celebration was a notable one. No citizen of Winnipeg was allowed to remain in ignorance of the fact that the day was the anniversary of the signing of the Declaration of Independence, and the Fourth of July was a much more notable day in Winnipeg than was the Canadian national holiday just three days before. We find no fault with the enthusiasm of our American friends, who are among our very best citizens, and who are doing so much to build up the west. A Fourth of July celebration which is brought to a close by the singing of the British National Anthem can find no critics in Canada.

But we do feel that the enthusiastic American shows Canadians an example which should be followed. No sane man would advocate celebrations which result in the appalling death list reported the morning after the great American holiday, but nevertheless all such occasions have their place in cultivating an enthusiastic and healthy patriotism. Western Canada is filling up with a heterogeneous population gathered from

the four corners of the earth, and all such occasions should be used to impress upon the new comers the fact that they are citizens of no mean country. The example of the Americans in Winnipeg might well be followed by patriotic Canadians.

THE CHINESE BOYCOTT.

IT would be practically impossible to over-estimate the importance of the boycott declared by the Chinese people on all goods of American origin. The movement has become so general that it is bound to attract a great deal more attention than it has so far done. Not only in the coast cities of British Columbia has the action been taken, but all down the coast the Chinese communities in such cities as Portland and San Francisco have taken up the cudgels. Recent events in China and other points across the Pacific are detailed at length in papers received the other day by the Empress of China, which arrived from Hong Kong. The determined action of the Chinese has been given force by the proposal to exclude from the United States even Chinese merchants and students. The protests of the Chinese against the signing of the proposed Act by the president took the form of a convention in the Canton Guild Hall at Shanghai, on May 12. This was one of the most notable and largely attended meetings ever held in Shanghai. Bankers and Chinese merchant princes from every province in China were present, and the utmost decorum was observed in the calm deliberations of the distinguished body of business men. Business-like resolutions were adopted briefly setting out the action to be taken to emphasize the protest. Not only will all American goods be boycotted, but every servant will leave his employ if American, and no coolies or other laborers will aid in discharging cargo from any ship loaded, in part even, with American goods. It was also decided to urge upon the Imperial Chinese Government not to grant passports to the interior to Americans, or to grant any concessions to them should the proposed new Exclusion Act of the U. S. Congress go into effect.

CEMENT AND WHITE LEAD.

RETAIL hardware merchants are interested in the recent changes in the tariff, two of the most important affecting the hardware merchant. Cement and white lead are the two articles upon which their attention is centered.

Cement, the value of which is being recognized more each day, has received more protection, and the duty which has hitherto been in the neighborhood of twelve and one-half cents per hundred has been advanced to twenty-five per cent. ad valorem on the bags which contain the product. Much of the cement imported into this country comes from the United States, and although a small portion is received from Great Britain it has the British preference of one-third of the duty to protect the imports from that source.

It is predicted that the American product will continue to arrive despite the change in the duty. This will be noticed especially in the eastern part of the Dominion, where it is difficult to sell the Canadian cement at a low figure owing to the heavy charges for haulage.

The change in the duty on white lead from five per cent. to thirty per cent. was made to protect the new industry in Montreal established a few weeks ago. In the past a large amount of lead in the corroded condition has been received from Germany, but this advance, when added to the surtax, will result in the cutting off of this trade from that country. The new duty may tempt other foreign companies to erect Canadian plants.

White lead, on account of it being used extensively in mixed paints, will undoubtedly at a later period advance the price of that article. The change was not unexpected, and both wholesale and retail merchants have had an ample warning to prepare for the new conditions.

Mr. J. A. Bremner, of Alex. Bremner & Son, Montreal, said that in his opinion both English and Belgian cements would still continue to be imported. This advance in the duty will, nevertheless, greatly help to protect the Canadian producers. The American cement is manufactured for about ninety-five cents per barrel, and the difference between this and the price on our market will also allow them to ship into Canada at a profit.

Mr. W. Dods, of P. D. Dods & Co., Montreal, is quite enthusiastic over the future prospects of the Canadian industry, and claims that when it gets in full running order it will be difficult to find foreign lead on the Canadian market. It is certain that Germany cannot compete, as the new duty when added to the surtax will make an obstacle too hard to overcome. There is no reason, as yet, why in a few years we should not have a white lead corroding industry equal to any other country.

Mr. Munro, of the Canada Paint Co., stated that the change in the tariff for dry white lead was not altogether unexpected. He had felt for a long time that the anomaly which shipped out our own lead and brought in other leads for consumption could not always continue, and now that the Minister of Finance has given a working margin, Canada will very soon contain corroding factories for the manufacture of all the dry white lead used within the Dominion. This is the object of the legislation and it will have its fulfillment.

The general impression was that it would have been left to the Tariff Commission to deal with the matter, and now that the essential features are dealt with, there is yet a great deal for the Tariff Commission to arrange. The differential between dry lead and paint is too little, and besides, as white lead enters into all general paints, it will be necessary to adjust the tariff under the heading of paints generally to the new conditions. Mr. Fielding has promised that the whole question will be taken up by the commission, and from his treatment of the items dealt with, we may depend that the others will also be suitably adjusted.

It is not customary for the Finance Minister in the case of manufactured goods to make so great a change immediately operative, and it is hoped that he will permit lead on contract, both with buyers and sellers, to be dealt with exceptionally at the former rate. We all want to see our own minerals used in our domestic consumption, and it is a pleasure to see this being gradually developed. The Canada Paint Co. operates four different mineral properties, and will soon have domestic lead ore treated from start to finish in their factory.

Price of mixed paints will remain as they are for a month or two until arrangements are made to issue fresh lists, but they certainly will be higher in the new year, if not before. The advance in prices really forms no grievance, because lead, owing to acute competition, is still extremely low, and mixed paints in the best qualities can well afford some advance.

Pending the erection of a sufficient number of factories, the new tariff (seeing it grants so important a preferential to Great Britain) will cut off all German and American leads, so that any temporary shortage of production in Canada will be imported from Great Britain.

As to whether the change from 5 p.c. to 30 p.c. is not too severe, I would point out that the duty on pig lead is 15 p.c., and duty on other lead manufactures is about 35 p.c. Suppose pig lead were scarce in Canada and imported lead remained subject to 15 p.c. (as it is bound to do), the manufacture of white lead in the country would be impossible at a less duty than 30 p.c. gross, because there is only 10 p.c. clear between 15 p.c. and 30 p.c. after deducting the preferential.

Fruit jar wrenches are a good line to push now.

An assortment of padlocks on a card will help to sell these goods.

ABOUT OURSELVES

IT is our desire to make Hardware and Metal of the greatest possible value to its readers. To do this we must know each reader's opinion—not his general opinion, but his opinion of each individual part. From all sides we hear complimentary remarks concerning the value and interest of the paper, but this general criticism, although an inspiration to us, is not the kind that is of must value. It is the pointing out in detail of each good point and each weak point as the opinion of the critic dictates that will enable us to increase the value of the paper to each of its readers. Even the man with the most fertile brain can get new and good ideas from nearly every one he converses with, and thus it is that ideas and suggestions sent in by readers are of extreme value to the editors.

We make it a point to see personally as many of our readers as possible, but we cannot hope to reach all of our thousands of readers that way. Therefore we address you through the columns of the paper.

You are pleased when you get a valuable suggestion from the paper, yet it probably originated with one of your fellow merchants in some other part of the Dominion. You are anxious to get suggestions from your fellow merchants, but remember that he is just as anxious to get suggestions from you. Therefore it is our aim to facilitate the interchanging of ideas and suggestions.

There are several ways in which each merchant reading this can make the paper of more value to himself and others. Supposing each takes half an hour and goes over the paper department by department and jots down a criticism of each, either commending or disapproving, then having reached the end, supposing he add any suggestions of a general nature that may occur to him. That would be one way. Or supposing that a merchant has thought of and devised some simple and efficient method of displaying some line of goods, such as garden implements, machinists' tools, etc., and sent to the paper a short description of it with sketches, if necessary. That would be another way. If each individual merchant would take the trouble to act upon these suggestions he would be amply repaid in the ideas he receives from his fellow merchants.

A hardware merchant in Brantford has a handy, neat, but inexpensive method of arranging and displaying his shelf hardware. He had shelves constructed and in his own tin shop had tin boxes made to fit these shelves. A sample of the contents of each box is held to the front of the box by means of a simply arranged spring on the inside. This is not a costly system and yet is handy and quite attractive. The idea he picked up from a merchant in another town. A merchant in Galt has an extremely good method of displaying linoleums, which idea he got from a hardwareman he called on in another town. The device consists of placing the rolls of linoleum on wooden rolls, the ends of which are made to fit into bearing receptacles in an upright frame work. Each set of receptacles are placed one above the other. Thus the linoleums are kept off the floor, and can easily be displayed by unrolling.

AS OTHERS SEE US.

MacLean Publishing Co., Toronto:

Gentlemen,—Find enclosed $2.00 to pay my subscription to HARDWARE AND METAL for year ending June 1st, 1905. I like your paper very much, and think it should be in the hands of every plumber and tinsmith, and especially those who have a mixed business and who carry a small line of hardware, etc. It is also valuable as an educator along the lines of plumbing and heating to those in towns and villages, and indeed, some large towns, whose knowledge of the craft is very limited. HARDWARE AND METAL comes as a welcome visitor and should be contributed to and supported by our best master mechanics, and when this is done, through such a useful medium, our master plumbers and other associations will be kept in closer touch with and helpful to all their members. We have to rely on your journal for latest current market quotations on plumbing goods, iron, paints, oils, etc., and I hope and trust you will always give them to us correctly. It saves time and we do not have to sit down and write to "the house" for quotations. Your Spring Trade Number was a revelation of good things and brought to our notice many new firms unheard of before. I am especially interested in hot air furnace work and plumbing work and cornice work. Any information along these lines will be appreciated.

Yours truly,
H. T. ANDREWS.

Orillia, May 22, 1905.

MacLean Publishing Co., Toronto:

Gentlemen,—I consider HARDWARE AND METAL to be the best trade paper in Canada, and I personally look forward to the receipt of the weekly journal, and find many items and reports of interest and benefit. Yours truly;

JOHN A GORDON,
Secretary National Association of Master Plumbers.

Montreal, June 19, 1905.

MacLean Publishing Co., Toronto:

Gentlemen,—I have to compliment you on the noticeable increase of the valuable matter which is appearing in the plumbing department of your weekly issue of HARDWARE AND METAL.

Yours truly,
J. THORP BLYTH,
Secretary Master Plumbers' Association.

Ottawa, July 8, 1905.

MacLean Publishing Co., Toronto:

Gentlemen,—I have taken HARDWARE AND METAL for some time now, and am well pleased with it. I like the way you stick up for plumbers and plumbing in Canada.

W. A. LOUGHREY.

Amherst, N.S., July 1, 1905.

All that was needed in each case was the idea, and the two illustrations indicate the ways in which one merchant can help another without injury to himself and with little trouble.

Thus it is if we are to get out a paper of maximum value we must have the interested co-operation of all readers.

Has your local hotel men or restaurant keeper a supply of ice tongs, choppers, shavers, etc.

SUCCESSFUL HARDWARE STORES.

HAVE the readers of Hardware and Metal been noticing the series of illustrated descriptions of successful hardware stores which have been appearing in these pages during recent issues ?

Much interest has been evoked by the series, and many favorable comments have been made in letters received by the publishers. Readers of Hardware and Metal in foreign countries are surprised to see the handsome photos of windows and interiors of stores not only in the larger cities but in the smaller towns. The pictures not only advertise the merchant as enterprising, but do much to dissipate vague ideas persons in foreign countries have as to the class of stores in existence in Canada. The view of Messrs. Emerson & Fisher's store at St. John, N.B., in a recent number, and of Messrs. Wells & Emmerson's store at Port Arthur, in this issue, have been particularly creditable.

The idea must not gain credence that the merchants whose stores are written up pay for the space in Hardware and Metal, or that the publishers are discriminating in any way. On the contrary, any dealer who can show a clean, bright, creditable store, is at liberty to communicate with the editor and have his store illustrated and described in the series. Photos of window displays or store interiors should be sent to the publishers and, if acceptable, illustrations will be made without cost to the merchant.

REPUTATION.

A GOOD reputation is a splendid asset for any business man. It costs little to procure; it is worth much to retain. Any merchant can gain it, if he starts soon enough. All that is necessary is persistence. Once the standard of excellence is set, a continuous adherence to it inevitably brings a good reputation sooner or later.

Take a list of the stores in any town and it will be found that the places of business of which the townspeople are proud, are the stores with good reputations. Why is it that in the larger cities there are a few stores left, which have not succumbed to the inroads of the department stores? It is because they have been sustained by their good reputations.

It is true that human nature likes variety. This is the reason for the restless rushing from store to store. Still it will be found that this frenzied rush is merely for novelties. The staple necessities of life are usually procured from one or other store of repute. The housewife comes to realize that she can rely on a certain merchant for her supply of a certain line of goods, and she sticks to him through thick and thin. If he prove unreliable the connection breaks. The continuance of the relationship depends on the maintenance of a good reputation on the merchant's part.

INTERIORS AND WINDOW DISPLAYS

THE SHOW WINDOW OF TO-DAY.

A PERSON returning to this country after a dozen years' absence would note no change in its commercial progress more striking than the development of the show windows of the large stores.

The most pretentious metropolitan displays a decade ago would hardly compare with those to be found in some of our provincial towns of to-day, while some of the work now shown in stores of our larger cities approaches close to the work of true decorative art.

This transformation is largely due to the fact that the merchant has come to realize that one of his quickest and surest ways of reaching the public is through the medium of his show window.

Those who are quick to criticise the displays they may see, would be much more charitable if they but understood the difficulties under which many displays are made, and the effort required to produce them. It is a noticeable fact that some establishments seem to have nice displays at all times, while others are often found to be unattractive. This is due more to the class of goods displayed than to the skill of the trimmer who arranged them. A display of fine goods will appeal to the masses regardless of how crude the arrangement may be, while a display of cheaper merchandise, although arranged in a more attractive manner, as viewed from a professional standpoint, will fail to catch the public eye.

The beautiful displays of large department stores around opening days and holidays represent an expenditure of time, labor and money quite beyond the popular comprehension. Some of these displays are under construction for months.

The show window has been termed the poor man's encyclopaedia, and rightly too, we think, for here he may see displayed goods from all parts of the world.

Window displays may be likened to the Sunday newspapers, inasmuch as they cater to all classes. The funny page of the paper finds its counterpart in the toy department display—the society woman gets her impressions from the fashion page and sees them carried out in the display of Paris gowns and hats—and so on through the list.

If the art of window trimming advances as rapidly in the next ten years as it has in the past, we may look forward to displays that will far surpass in beauty the show windows of to-day.

DON'T NEGLECT THE INTERIOR.

If you have good window displays, your store inside should be kept up in appearance with the window. If not, the ideas of neatness and taste suggested by the window display will be greatly lowered upon the customer stepping into the store, and that of itself forms a bad impression. If there is to be a difference between the two, the store, as a whole, should present the better appearance, for there the ideals produced by the window display will be elevated and rendered more pleasurable by the store display. Timely decorations help greatly to beautify a store, and the retailer would do well to give some attention to them. Gorgeous and lavish decorations are not necessary, but something simple in character and good taste will serve the purpose.

LOCOMOTIVE DISPLAY.

A Minnesota hardwareman recently attracted considerable attention by a window display showing a locomotive and tender made of tinware, as follows: The cab is a gasoline stove oven, the cab roof is one sheet of galvanized iron, the wheels are two registers with tin covers as centres of same, the piston rod is one long oiler, a rule serving as driving rod, the head light is a cycle lantern, the somke stack is one quart measure inverted and two pans one over the other. A small hand bell serves as a bell. The steam chest is one large oiler with neck detached, the small wheels are pulley wheels and the side steam chambers are represented by supporting bread pans, the cow catcher is made of rules alternatively arranged in V shape; the boiler and fire box are represented by a milk can, the tender couplings by a pick axe, tender wheels by pully wheels, tender springs by large springs and tender top by one savory roaster filled with pump plunges to represent fuel, also hammer and pick for tools. Inside the cab two small dolls are used to represent the engineer and firemen, while rails and ties are laid in gravel, the whole making a realistic display.

DELIVERY BY AUTOMOBILE.

Delivering stoves by automobile is the latest innovation. The past century has brought us so many surprises that we are almost prepared for anything. Only a couple of years ago the man who owned an automobile was looked upon as a freak who had more cash than brains, and the store which used the horseless carriages did so more as a method of advertising than as a means of cheap delivery. But we reproduce a picture taken of H. J. Flock, a hardware merchant of Sterling, Illinois, using the plaything of the rich for practical use in delivering a stove to one of his customers, having rigged up a box work in which to set the stove—a Round Oak Chief Steel Range, made by the estate of P. D. Beckwith, Diwagiac, Michigan. To hardware men doing business in small places, where a large radius of territory is covered, these machines ought to prove especially useful in traveling about the country. An automobile will allow a dealer to visit many times more customers in a day than as though he traveled by horse power. Again, the

Delivering Stoves by Automobile.

people like to see signs of prosperity; of the adopting of modern methods, and those who are the first to use autos in their respective localities are going to secure a great deal of advertising as wide-awake merchants.

THE DISPLAY OF TINWARE.

In the illustrations of the tinware department of Henry Morgan & Co., Montreal; an idea is given of the methods adopted by department stores to display their goods so that the women who use these goods can easily inspect them. It will be seen that tables and shelves are used to good advantage, and while an enormous quantity and variety is shown it is done in such an orderly manner that plenty of floor space is available for the use of customers. No doubt fully fifty per cent. of the sales are a result of customers being attracted by seeing some article which they realize they need, but which they had no intention of buying until they saw the article displayed and the price plainly marked upon it.

Display of Tinware, Henry Morgan & Co.'s Store, Montreal.

Hardware merchants can learn much from the departmentals in matters of display, and the illustrations should suggest many money making ideas to our readers, some of whom undoubtedly have a corner of the store or an upstairs or well-lighted basement which could be utilized as a display room for tinware and the other small household articles.

FREQUENT CHANGE OF DISPLAY.

No matter how good a display may be, it should not be allowed to stand for more than a few days. Frequent changes prevent the damaging of goods by exposure, and they make the effort far more profitable. Timeliness is another important feature. The display should have direct bearing upon the needs of the public at the time it is shown. The judgment of the merchant himself and the trade conditions prevailing in his locality make the best criterion for determining the nature of the showing.

THE DISPLAY OF GOODS.

Department stores work up a big business on some lines of hardware because the women go there, and also because they have the goods on display where the women can get at them. The success of the hardware department in a department store is as much due to the tables used in display as anything else. Women like to inspect the goods. With the goods displayed on the tables the inspection is easy. As long as that has proven successful in a department store it is plain that hardware merchants should use the same plan.

Tinware Department, Henry Morgan & Co., Montreal.

TRY A CAMPING WINDOW.

Make a camping window trim for variety. Put in a small tent and rig up a miniature camp. A fire with a kettle suspended over, a pile of firewood, an axe stuck into a log, several rods leaning against a tree, a gun or two, a tackle box, etc., should be introduced. One such window noted last year had a man seated on a log. He had his open tackle box beside him and was fitting a trolling hook on the line at one time. Twice a day his position was changed. He would be fitting on a troller, then he would be leaning over looking into the tackle box. The next time he was winding the line on the reel; the next putting a frog on the hook, and finally he was placed just at the edge of the window headed for the lake—apparently—with his rod in one hand and tackle box in the other.—Hardware Trade.

SUGGESTIONS.

Make a window display directed at the women once in a while. "Wash Day" might be selected as the theme and the window would then contain tubs, wringers, clothes pins, cloths driers, lines, buckets, boilers, scrubbing brushes, washing machines, etc. Then a house-cleaning window would have all the necessary paraphernalia for that important duty.

Flies mean trouble for the window trimmer, especially if he is using light colored goods and nickel fixtures. One trimmer commends the use of saucers of heated ammonia in the window. They will drive the flies out, it is said. Oil of pepperment is also distasteful to the flies, and used in the water in which the inside of the window is washed will help to eradicate them.

With the coming of the flowers the trimmer has more material to aid him in his work. And the flowers furnish a good guide for color combinations. Nature doesn't make mistakes in mixing her tints and by following her example you cannot go wrong.

Look after the upper part of the window. Often the eye will follow an excellent trim towards the top until it reaches a large unutilized space vacant but for cobwebs or dust. If the window is not boxed in care should be taken to see that the upper portion is clean and that it is in keeping with the rest of the window.

The James Smart Mfg. Co.

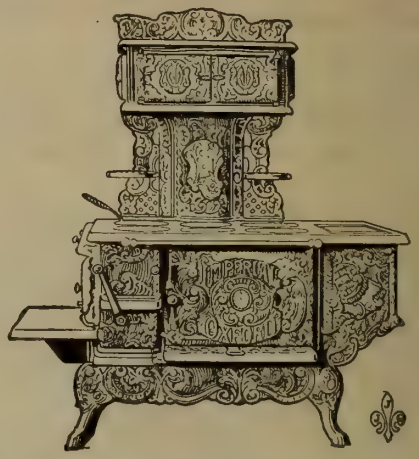
Limited

Winnipeg, Man.

Brockville, Ont.

What's the use of trying to push a line of ranges that people know little or nothing about when there is just as much profit and far less trouble in it for you if you handle the famous

Oxford Chancellor Range



A Steel Plate Range—Burns Wood, Soft Coal or Hard Coal.

We have already done the hardest part of the selling for you. Range buyers come to your store nine-tenths convinced because of our strong advertising and the personal recommendations of friends that the Oxford Chancellor is "THE" Range. When they see it, it looks the part and almost sells itself.

Better handle only sure trade winners. The Oxford Chancellor should be on your floor.

You can't put "ginger" into your store talk if you lack faith in the basic merits of your goods.

If you have been selling a line of Ranges that have proved troublesome from the number of complaints that followed sales; if you have felt the loss of trade in other lines because of this, why don't you handle the one range that never fails to satisfy—the

Imperial Oxford Range

The Handsomest Cast Iron Range Made.

Sixty years of range building perfected it, forty thousand Imperial Oxfords in actual use demonstrate the present day demand, and words of praise from thrifty housewives everywhere tell of its acknowledged superiority and unfailing satisfaction.

Can you afford to refrain from handling the Imperial Oxford Range?

STOVES AND TINWARE

THE EVOLUTION OF THE STOVE BUSINESS.*

EVOLUTION of the stove business may include a history of the industry, its growth, and its constant westward trend since stove-making began in the United States. It is not my intention to go into that feature of the business to any extent. Evolution of selling methods and methods of distribution interest the retail hardwareman more. In the memory of all of us, we have seen many changes in this particular. Right now we are confronted with two important problems. What will be the effect of catalogue-house competition on the retail hardwareman's stove business in the near future? Where is the jobber, with his peculiar methods of stove selling, taking us?

Has Its Limitations.

I once thought the mail-order business in stoves would grow to menacing proportions. I have changed my mind on that score to a certain extent. I still think there will be some growth in that direction, but I believe it has its limitations. Tremendous efforts are being made by advertising agencies to get stove manufacturers to embark in the mail-order trade, and I assure you that it is not without some attractions. One of the advertisements from one of these agencies came to me a few days since, and while it was intended to stimulate the thought of mail-order business, it had the contrary effect. It read:

"Tell your story where it will be heard. Don't try to sell mail-order goods to people who get into a big city department store every day. Get out into the country; country people have plenty of time to read papers. Country folks have just as many wants as city folks. Everything they buy, except the bare necessities of life, must come by mail from some mail-order house."

As I said, this advertisement had the opposite effect on me than the one intended. In the first place the country folks are not the large consumers of stoves. I think you will all agree with me that your sales are larger in your towns than in the country; I mean in proportion to the population. So there is still a field for profitable stove business.

The fact that the farmer is reading will add very materially to the downfall of the mail-order stove man. Neither does he buy all but the necessities of life by mail. You will continue to see him in your towns, as his social side must be developed, and when you see him talk to him, asking him if he liked his mail-order stove. He will eventually tell you the truth and come to see you the next time he wants a stove.

Reached Its Limit.

Another fact we must keep in mind is that although the mail-order man has been making a lot of noise he has not distributed anywhere near the percentage of the total output of stoves that many people think he has. In fact, up to the present time but a very small percentage has been distributed by the mail-order method. This is the result after years of pounding by numerous mail-order concerns, some of them ranking among the largest retail institutions of the country. It seems to me that the mail-order stove business has about reached its limit.

There has, however, what I consider a more dangerous factor recently come into the distribution of stoves, and that is the hardware jobber. This jobber reaches farther than the mail-order man. He goes to all the country stores, or to-called general stores, not only in small villages, but to the crossroads, where there is nothing but one small store. So far as the stove trade is concerned I think this competition far more demoralizing and a much greater profit destroyer than the mail-order man.

If a customer comes to you and says he can buy a stove for a certain price from a mail-order house, you know just what argument to use with him, and just what you have to contend with; while, on the other hand, if he says that Jones at the crossroads three miles out will sell him a stove for so much you do not know where you are at. You do know, however, that Jones will sell this stove at a much less profit than you will or can, so you have to let him sell it and fatten the jobber. Jones doesn't need any fat, and wouldn't know what to do with it if he had it. This jobber is bending every effort to get an outlet for his goods by the above methods, and by doing all he can to encourage new stocks in the already overstocked towns. I have an advertisement, cut from one of the leading trade papers last Summer, which will bear me out in this. In it a leading hardware jobbing house gives a list of towns where it believes hardware retailers can profitably locate. Of this list of about 30 towns 6 have 15 to 80 population, 15 have from 100 to 300 population. All of these towns have from one to two hardware stocks now. The balance of the list ranges from 300 to 3,000 population. From the testimony of mercantile reports these are already overstocked from a retail hardware standpoint.

I think you can all see plainly that the jobber in the stove business is more to be feared as a demoralizer than the mail-order men. The jobber will continue to grow as the wants of the country grow, but your stove business will not continue to grow in proportion, although the aggregate of the stove business is larger every year. The evolution of the business is in the methods of distribution.

I do not see any reason why the west should not be producing a large percentage of its own consumption of stoves within comparatively few years. I believe the industry has a big future in the west. I believe that western retailers and western users of stoves will have a preference for western made stoves. I hope that this big increase in output will be marketed through the hardware stores and that influences which tend to cut up the stove business until it means very little to the hardware retailer can be counteracted.

* Paper read at the annual convention of the North Dakota Retail Hardware Association, Fargo, February 1-3, 1905, by G. L. Nye, Shakopee, Minn.

QUESTIONS IN HEATING AND VENTILATION.

AT the annual meeting of the American Society of Heating and Ventilating Engineers, held in New York City in January, President Wm. Kent, Frank K. Chew and C. E. Oldacre were appointed a committee to collect data on furnace heating, and report on their investigation at the next meeting. They have accordingly formulated the following questions, which have been sent to the members of the society with the request that the members furnish information on the different questions so far as their experience will enable them to do:

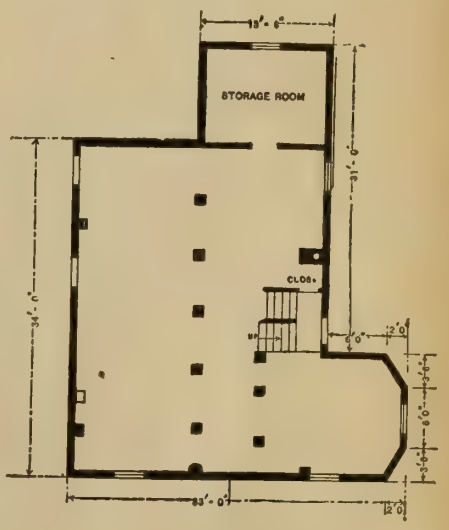

Fig. 1.—Basement Plan

There is no doubt that many who read this have opinions and experience on the subject that would help others and add to the comparatively low fund of knowledge at present available. A few moments of valuable time thus taken are well spent if they only serve to excite a wider interest in meritorious investigations like the present one.

1. What rule or formula would you use for obtaining the following: Heat lost by conduction and radiation from buildings through walls, windows, roofs, etc.? Heat lost by warm air escaping from the building?

2. The sum of these two losses is the total heat that must be supplied to the circulating air by the furnace. What quantity of air should be passed over the furnace in order to absorb this amount

of heat? Have you a formula or rule for obtaining this?

3. Suppose the outdoor temperature is zero and the temperature of the hall or other part of the house from which air may be drawn into the cold air box is 60 degrees, what proportion of the air

Fig. 2.—First-Floor Plan.

would you draw from the outside and what from inside in an ordinary dwelling house of 8 to 12 rooms?

4. How would you calculate what would be the maximum temperature of the air passing over the furnace? Do you consider this the most advisable temperature of the air at the outlet?

5. What rule or formula have you for proportioning the extent of the heating surface to the maximum quantity of heat to be given to the air by the furnace?

6. What rule have you for diameter of fire pot, depth of fire pot, diameter of grate and for maximum rate of combustion per square foot of grate surface per hour?

7. What rule have you for determining area of pipe admitting cold air from outdoors? If pipe is used for inside circulation, what then?

8. What rule have you for area of heater pipes leading from furnace to first, second and third floors?

9. What rule have you for the sum of the areas of all the air outlets of the furnace?

10. What rule have you for the area of the registers?

11. What preference have you as to the location of registers in different rooms?

12. What is your rule for area of foul air outlet from the house?

13. What method have you for insuring entrance and circulation of warm air in every room, particularly those on the side of the house exposed to the strongest cold winds?

14. What is your opinion of warm air heating where a positive means of circulation is used, including both inlet and exit pipes for every room? Do you know of any examples and where?

15. Design a system of heating by warm air for the accompanying floor plans under the following conditions: The house fronts to the north and the prevailing cold winds are northwest; the lowest outside temperature is 20 degrees below zero. The library has a grate for a wood or coal fire. The house is well built; the windows in the north and the northwest rooms are double. All windows and doors are provided with weather strips and are as air tight as they can be. Show the location of furnace and location and sizes of all pipes for fresh air, warm air, air circulation out of rooms and foul air exits, size and location of registers. The kitchen and laundry and the two unfinished rooms on the third floor are not supposed to be heated. Give a rule, a reason or formula for the adoption of every detail.

16. Do you live in a furnace-heated house? If so, can you furnish any experimental data obtained from the heating system, such as the following:

In extreme cold weather what is the temperature of air outdoors, temperature indoors in different rooms. Size of building. Cubic contents of rooms. Exposure. Number of pounds of coal burned in 12 hours daytime and 12 hours night. Number of pounds of coal burned per season. Temperature of air entering

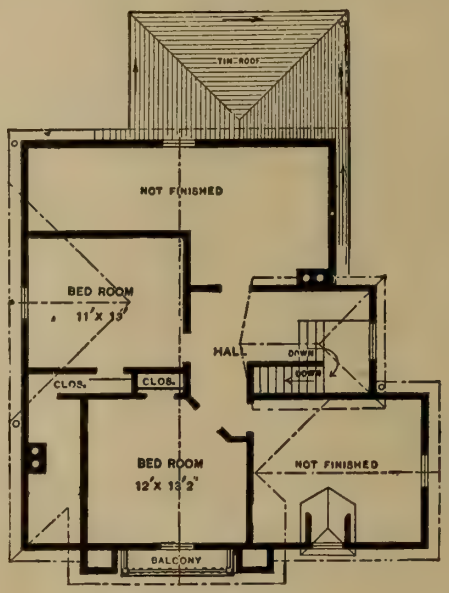

Fig. 4.—Attic Plan.

furnace. Temperature of warm air at several registers. Velocity of air in flues and through the registers. Area of inlet and cold air from outdoors. Area of inlet from hall or other parts of the house.

17. What are the principal faults that you have found in warm air heating installations when they have been incorrectly installed?

18. Please suggest any other questions or any modification of the above questions which would tend to bring out useful data in regard to warm air heating.

CHIMNEYS AND DRAFT.

THE top of the chimney should be higher than the house and everything that surrounds the house. See that it is. A boiler has no draft in itself—you've got to create it—can't do it if the height of the flue won't permit. But don't go to extremes—too "strong" a draft is as bad as one too "weak." See that the flue is perfectly clear, don't guess—look and see.

Close up all openings, except the one to which the boiler is connected. Look below the chimney connection—perhaps there's an "air-pocket"—such would cause down-currents in the flue. When flue runs lower than necessary, run a sheet-iron plate across it six inches below smoke-pipe connection—cement it over to make it air-tight. In case of fire-place or closet built in front of chimney, see that flue has not been reduced in size at that point, even though it shows full size at top and bottom, it may be narrowed in the middle. Always have the flue open up to full size all the way. Inspect the chimney, and, if it's an old one, see that no mortar has fallen out between bricks—this allows air to leak through and spoil the draft. Fill up all holes in flue and plaster them over. If chimney is new, it will take a week or two to dry it out—don't hurry the drying.

Sometimes smoke pipes are run too far into the flue and the draft cut partially or entirely off—a little care and a tight-fitting collar will avoid all this.

It's a good plan to place an upturned elbow (mouth upwards) at the flue-end of the pipe just inside the flue when other simple remedies don't improve a stubborn draft. This can be done by cutting a tooth-pick joint in a pipe length.

Get it out of your customer's head that he must make a boiler fairly "eat coal" to give heat—a fire can be kept from 8 to 12 hours economically and efficiently by a little practice and common sense. Stir a fire up thoroughly twice a day—night and morning—and remove the ashes. Keep the ash-pit closed—it rushes the fire and wastes the heat. If clinkers give trouble, the draft is probably too strong—or the coal poor—turn the grate over and break them up; rake if necessary to break up the mess—then shake grate enough to loosen the fine ashes which stick to the sides of partly-burned fuel.

Fill the coal chamber full to the top of the fire-pot—good "stove" coal gives best results for ordinary use. Open up

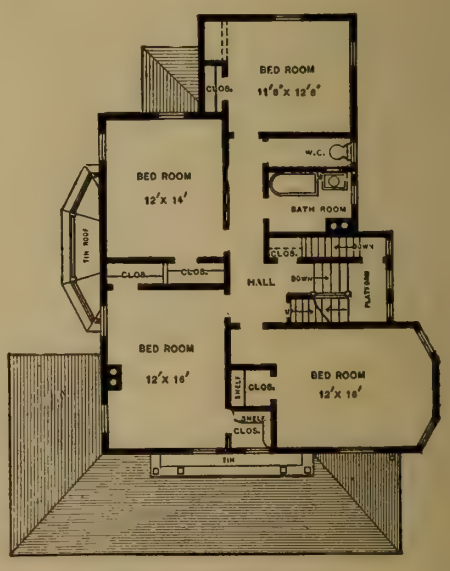

Fig. 3.—Second-Floor Plan.

draft long enough for the whole body of coal to ignite. Turn off draft after body of coal has started to burn—if necessary, open smoke-pipe check—this will permit the natural draft of burning fuel

to continue to furnish the oxygen necessary for perfect combustion.

If, through defects in the chimney, draft is poor, close the smoke-pipe check and leave the draft-inlet door partly open, especially if cold weather. Opening the feed-door will check and cool the fire rapidly—keep it closed if you want to keep the fire.

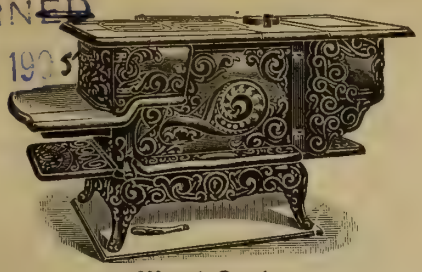
New Foundry Addition, Gurney-Tilden Co.'s Works, Hamilton.

THE GURNEY-TILDEN CO.'S STOVE WORKS.

THE present firm of the Gurney, Tilden Co., Limited, Hamilton, was founded in 1843 by E. & C. Gurney, and the business was carried on under that name until 1893, when it was incorporated under the present name. The officers of the company are: John H. Tilden, president; O. G. Carscallen, vice-president; E. D. Cahill, treasurer; J. J. Conway, secretary. The Northwest and British Columbia business is looked after by the Winnipeg branch of the firm, known as the Tilden, Gurney Co., Limited, the management of which is under I. W. Martin. The firm also has warehouses in Calgary and Vancouver. The Ontario representatives are as follows: Robt. Porterfield, who has charge of the territory north and west of London; C. E. Marks, from Hamilton to London and south to Lake Erie, including Niagara Peninsula; R. M. Stuart, north of Toronto to Sault Ste. Marie; J. E. Bennett, Toronto and east as far as Montreal. Quebec and the Maritime Provinces are under the supervision of Chas. Nicoll, 85 St. Peter street, Montreal. Their foreign representatives are: England, the Thames Bank Iron Co., London, E. C.; Australia, Chas. Dobson Franks & Co., Sydney. The representatives for Western Canada are: J. C. Thompson, Winnipeg, main line west to Medicine Hat; H. W. Thompson, Winnipeg, main line east to Port Arthur and northern and southern Manitoba; the Western Hardware Co., north of Regina; and C. A. Godfrey, Vancouver, British Columbia.

At present the firm employ 360 hands. The works cover a space of nearly four acres, and the power consumed, including electrical for lighting, etc., is about 140 horse-power. Plans are at present being prepared for the construction of new buildings, including hardware manufacturing departments, storage departments and japanning ovens, which when completed will occupy all available space. An accompanying illustration shows the new section of the moulding department, which has just been completed. The building of this addition was occasioned by the large demand for base burners last Fall, when the moulding department was taxed to its greatest capacity.

The lines manufactured by this firm are: "Souvenir" stoves and ranges for coal and wood; "New Idea" hot air furnaces for coal and wood; "Hamilton" radiators for hot water or steam; builders' hardware and general castings, including locks of all kinds, door sets of very varied designs, including escutcheons, push buttons, bell turns, letter-box plates, etc., sash lifts, drawer pulls, door bolts, cupboard catches, sash pulleys, hinges, etc. Of the various departments in which these are made, including the brass moulding shop, machine shop and japanning departments, nothing will be said.



In connection with the manufacturing of the radiators the core department, the moulding departments and what is called the radiator department are of interest. In the core department the cores for the radiator moulds are formed and baked. In the radiator room the parts are assembled and put together, the finishing touches put on them; and finally they are crated and sent to the stores department or to the shipping room. The manufacture of the furnaces starts in the carpenter shop, where the patterns for the castings are made, and progresses through the moulding shops, the scratch house, where the castings are chipped and cleaned, the furnace department, where the steel parts are cut and formed and the furnaces are put together to the stores department or shipping room. The trimming department is in close connection with the furnace department, where furnace pipes and hot air conduits, etc., are made.

The manufacture of the stoves starts in the pattern or carpenter shop. The patterns are taken to the moulding shops; from thence the castings are taken to the scratch house, where they are chipped and cleaned; some parts then go direct to the mounting departments, while others go up to the nickel-plating room, and on to the mounting rooms. The sheet steel parts are made in the furnace department and go from there to the mounting rooms. From the mounting rooms the erected stoves are taken to the finishing department where they are polished and crated; from there

FINDLAY BROS., Carleton Place, Ont.

Coltart & Cameron Co., Limited, Winnipeg, Man., Selling Agents for Manitoba and Northwest Territories

being taken to the storerooms, to the shipping department or perhaps to the showroom.

In the carpenter shop are made, besides patterns, boxes for the moulding department and crates, etc., for the shipping department.

The foundry consists of four departments, one of which is shown in the accompanying illustration. The addition of the new moulding shop brings the capacity of the foundry up to about 32 tons per day. At present modern appliances are being installed in the foundry for the convenient and speedy handling of coke and iron for the cupola.

One illustration shows one of a group of four mounting shops, each shop being devoted to different styles of stoves. As can be seen in the illustration, large racks run down one side of the shop to receive the parts as they come from the scratch house or from the nickel-plating room. Running down the other side of the room is the bench, which is equipped with vices, grinders, etc., necessary for the fitting together of parts. There are also drills on the floor.

Assembling Room, Gurney-Tilden Co.'s Works, Hamilton.

The power house is centrally situated. The exhaust steam from the engines is used for heating the buildings during the Winter, and in the Summer the engines exhaust into the atmosphere.

The offices, which are shown in one of the illustrations, have recently been remodelled, and are constructed with a view to the latest improvements in heating and ventilating. They are spacious and handsome.

Sporting goods make a very attractive window display. At this season of the year, when so many are considering the vacation proposition, a line of fishing tackle and the accompaniments will stop nine men out of ten every time.

FIRELESS COOK STOVES.

A REPORT to the bureau of commerce and labor from United States Consular Clerk Murphy, Frankfort, Germany, gives some information about the "fireless cook stove." It makes interesting reading, but cook stove manufacturers need not throw away all their patterns and start anew on the strength of this discovery just yet. The following is the report:

"In a recent address to an audience consisting largely of working people, Mrs. Back, wife of the director of the industrial school at Frankfort, brought to the attention of her hearers the following interesting information in regard to a new article of kitchen furniture—the hay box, or fireless stove.

"Every housewife knows that a pot of coffee can be kept hot for a considerable length of time, without the aid of fire, simply by wrapping it securely in a dry towel in order to hinder the escape of heat. It now seems very strange that the world has been so slow to make a practical and more extended use of this idea.

"At the Paris exposition of 1867 much attention was attracted by a wooden box lined with wool and felt, which was called 'the Norwegian automatic kitchen.' In this box food which had been boiled for only a very few minutes continued to cook slowly, and in two or three hours was found to be ready for the table. For some unexplained reason all efforts to bring this useful novelty into general use proved unsuccessful until the matter was recently taken up systematically and with more enthusiasm in Baden. The propaganda is now being successfully pushed in Berlin, Munich, Frankfort, and other cities by means of popular lectures and public demonstrations of the convenience and practical value of this method of cooking.

Called a "Hay Box."

"Mrs. Back stated that she has now been using the hay box for thirteen years, and that it has greatly reduced for her the cares and annoyances of housekeeping. At first she used the box merely for the purpose of keeping finished food warm, but it was not long before she discovered that the process of cooking continued in the box. She thereupon extended its use, making a series of experiments which resulted in pleasant surprises. She soon found that she could finish in the box all boiled and roasted meats, sauces, fish, soup, vegetables, fruit, puddings, etc. Of course the box can not be used for beef steaks, cutlets, pancakes, and the like, articles whose chief attraction lies in the crispness resulting from rapid cooking on a hot fire, but when food of this kind is being prepared it is a great comfort to the housewife to know that the rest of the meal is ready and hot in the box.

"In any household such a box will be found of great advantage, lessening the worries of the housewife and cook, and leaving much more time for other duties and recreations, but for working women it is more than this—it is almost indispensable.

"A little patience and interest will secure all the experience that is needed and remove all doubts. A few experiments will teach how much preliminary cooking on the gas stove is required for different substances. In general, it will be found that two or three minutes of actual boiling on the fire is amply sufficient for vegetables, while roasted meat requires twenty to thirty minutes. Most articles should remain tightly closed in the box for two or three hours, though they can be left there to keep hot for ten or twelve hours, if necessary.

"Cooks Everything."

"Rice, dried beans, lentils, dried fruit, etc., should first be well soaked in cold water. After being allowed to boil for from two to five minutes, one to two hours in the box will prepare them thoroughly for the table. Cabbage should be prepared the evening before it is to be used. It should be placed in the pot with very little water, cooked well in its own juice, and put overnight in the hay box. Just before dinner on the following day it should be warmed on the stove. Cauliflower and other soft vegetables should be merely brought to a boil and then placed for an hour or two in the box. It will be found that soups are greatly improved by being allowed to develop for two or three hours in the hay box. The covers of the pots should, of course, not be lifted when the pots are being transferred to the box. By the old method of cook-

"Kitchen" Steel Range.

ENTIRELY NEW

Supplied with both coal and wood linings.

Water-front can be supplied if desired.

Has large 20 x 20 inch oven bottom.

Made with 4-8 inch or 4-9 inch pot covers.

Fire-box will take a 24 inch wood.

Duplex grates, drop oven door with **Enameled Steel Lining.** Steel body and steel leg base. Extra large ash pan. Steel high shelf or closet.

The "Kitchen" has already made itself popular with the trade, and is sure to be a fast seller.

Montreal and Hamilton. Branch Warehouses: Toronto, St. John, N. B., Hamilton, Ont.

ing, it is necessary to boil dried beans two and one-half to three hours. When the hay box is used, boiling for five minutes will be found sufficient. This will give a clear idea of the amount of fuel saved.

"Science teaches that many substances become ready for use as food at temperatures below the boiling point; and that, unless the pots are hermetically closed, a temperature exceeding 212 degrees F. can not be attained, no matter how much fuel is consumed nor how long the boiling is continued. Accordingly, the object to be kept chiefly in view is

Method of Cleaning.

to retain the heat as long as possible when it has once been developed.

"One of the first things for a novice to learn is how much water to use. It will soon be found that too much is better than too little, and that if beans, peas, lentils, oatmeal, etc., have less water than they can absorb, they can not become properly cooked, no matter how many hours the process is continued. No water should be poured from the pots, not even from potatoes, as it always contains valuable salts derived from the cooking substances, whose loss must lessen the alimentary value of the vegetables or meat.

How They Are Made.

"The hay boxes now being offered for sale in German stores are usually lined and partitioned with hay, felt, etc., and the receptacles are furnished with covers which can be securely locked. Such boxes are no doubt useful when food is to be transported—for instance, from restaurants; but there is one serious objection to them—their immovable felt and upholstery may become moist and moldy. A home-made hay box will usually be found cheaper and more practical. Almost any box will do which has a tightly-fitting cover. The wood of which it is made should not be too thin, and, of course, there should be no knot holes or cracks. Old trunks and valises may sometimes be successfully utilized in this way.

"The box should be loosely filled with shavings, paper, or hay—the last mentioned being probably the most satisfactory. The hay should be renewed every two or three weeks. Before the pots are ready the requisite number of nests in the hay should be prepared, and when the pots are placed in these holes the hay should be packed under and around them tightly. Any kind of pots can be used, although, of course, earthen ones hold the heat best. The tighter the tops fit the better, but if the food is to be used within six or eight hours, it is not necessary that they should be of a kind which can be hermetically closed. Ordinary tops will be found perfectly satisfactory. When the pots have been placed in the box carefully and without lifting the lids, they should be covered with a pillow and the lid at once securely closed.

"When not in use, the box should always be left open and the hay loosened, the pillow being hung in the air to dry thoroughly.

"The chief advantages of the hay box may be summarized as follows:

Advantages.

"1. The cost of fuel can be reduced four-fifths, or even nine-tenths. 2. The pots are not made difficult to wash; they are not blackened, and they will last for an almost indefinite period of time. 3. The food is better cooked, more tasty, more nutritious, and more digestible. 4. Kitchen odors are obviated. 5. Time and labor are saved. 6. There is no need of stirring or fear of scorching or burning. 7. The cares of the housewife are lessened, and her health and happiness are thus protected. 8. The kitchen need not be in disorder half of the day. 9. Warm water can always be had when there is illness in the house and during the Summer when fires are not kept up. 10. Milk for the baby can be kept warm all night in a pot of water. 11. Where workmen's families live crowded in one or two rooms the additional suffering caused by kitchen heat is obviated by the hay box, for the preliminary cooking can all be done in the cool of the morning. 12. At picnics the appetites of young people are only half satisfied by sandwiches and other cold food. The hay box can furnish a hot meal anywhere and at any time. 13. Similarly, men and women working in the fields or having night employment can take with them hot coffee, soup, or an entire meal, thus avoiding the necessity of returning home at a fixed hour or having it brought to them by another member of the family. 14. When different employments make it necessary for the various members of a family to take their meals at different hours, this can be arranged without a multiplication of work with the assistance of the hay box. Of course it is necessary that the box be kept perfectly clean, as otherwise it may become sour or musty."

The Greener iron area at Barrasois, C.B., consisting of half a square mile, has been bonded to the Londonderry Iron Company for three months. The price to buy is said to be $75,000.

FUEL IN ALBERTA.

THE great future of the economic outlook in the new Province of Alberta, next to its agricultural possibilities, is the coal fields which underlie so large a part of its area. There are said to be 65,000 square miles of these coal fields, and active mining is being carried on at whatever points a market can be found. An indication of the amazing extent of the distribution of fuel wealth may be best obtained by a mere enumeration of the places within the new province where mining is being carried on: Steam and domestic coal at Coleman, Frank, Lille, Cowley, Lethbridge, Medicine Hat, Canmore, Red Deer and Knee Hill. Lignite at Lethbridge and anthracite at Bankhead and Anthracite, while on the reserve of the Crowfoot band of Indians there is a quarry of coal which the Indians shovel out and sell to the settlers.

At Edmonton and along the banks of the Saskatchewan River at many points the settlers have made openings and mine their own coal. It is also carried on as a business. There are thirty mines in Edmonton and immediate vicinity. Farmers' banks, where the settler drives up and mines a cartload of coal, may be come upon at various points in Alberta from Edmonton to Pincher Creek.

It would be difficult to exaggerate the importance of this wide distribution of one of the necessities of life, especially in a country where fuel of any other kind is scarce or non-existent. When these plains are teeming with settlers there will be an enormous traffic in the transportation of coal.

WIRE CUSHIONED OIL CAN.

THE one-gallon cushioned glass oil can shown herewith is provided with heavy indestructible beaded tin rings clinched tight to the coiled wire jacket. One ring is clinched to the

Wire Cushioned Oil Can.

bottom part and the other to the top of the wire jacket, this construction enabling the coiled cover to be removed from the can to facilitate the cleaning of either the glass or the jacket. Corrugated tin protects the bottom. The wire coils are all linked together and form an endless woven fabric. The cans are packed either one-half or one dozen per box, and are put on the market by Ohio Lantern Co., Tiffin, Ohio.

PERFECT IDEA!

Absolutely the Most Up-to-date and Perfect-working Range on the Canadian Market.

FEATURES

Loose Nickel Bands, Medallion and Shelves may be removed instantly for cleaning or when blacking Range.

Direct Draft Damper is operated from the front; the Damper Rod is not exposed to fire, and cannot burn out or warp.

The Main Bottom is corrugated and cemented, preventing unnecessary loss of heat through the bottom of Range and insuring quick baking by the reflection of heat against oven bottom.

Sliding Check Damper gives perfect control of draft.

Double Draft Duplex Grates.

Extension Fire Box.

Cemented Oven Top. Large Ash Pan.

Reliable Oven Thermometer.

Can be fitted with special Gas Attachment, so that back two lids serve as gas burners.

Grate Bars may be removed without disturbing linings.

PIONEER TRAVELING IN THE WEST

A DRUMMER'S lot in the west is, even at this late day in western development, no easy task. Difficulties of overcoming distances and transporting luggage and samples, on muddy roads or overloaded railway trains, are sufficient to drive to distraction any knight of the road who

T. Tweed, Medicine Hat, N.W.T.
President N.W. Boards of Trade.

hasn't accepted as a motto the oft repeated words, "Don't Worry." And the cost of covering this country of magnificent distances is such as can only be financed by strong wholesalers and manufacturers whose goods have merit, and whose business methods are such as to win and retain a good connection with the enterprising men who have staked their future on the mercantile prospects of the great and growing west.

But if these are problems of to-day, with a transcontinental line having two lines across the territories, and with two other transcontinentals working their way across the prairies, what must have been the problems of the drummer of twenty or thirty years ago? Hardware and Metal was fortunate this week in having an opportunity of gleaning some reminiscences of the experiences of Mr. A. D. Kennelly, who made many trips between the Great Lakes and the Rockies between 1881 and 1895, on behalf of the McClary Mfg. Co., Limited. Mr. Kennelly is now manager of the important branch of this company at 177 King street west, Toronto.

Prior to 1879 the territories were controlled by the Hudson's Bay Co., and for many years afterwards the Hudson's Bay Posts were the centres of merchandising. Gradually, however, the country became settled and private merchants secured a foothold. The country became more than a fur-bearing district, and all classes of merchandise were sent westward to be sold to the Indians, halfbreeds, and the white pioneers, whose love of freedom and nature was greater than their fear of the dangers of frontier life.

The early means of transportation were rough and travelers were unable to spend their nights on Pullman sleepers. Boats could be taken from Winnipeg up the lake and via the Saskatchewan River to Prince Albert, Battleford and Edmonton, while stage lines ran southward along the foothills to Calgary and Fort MacLeod. Away from the rivers and on the prairies pack trains were used largely, and many an adventure occurred by those whose inability to throw a diamond hitch caused the pack to work around under the cayuse's belly rather than to rest securely across the animal's back. The old carts of Hudson's Bay days will also be remembered by any who heard them. Constructed almost entirely of wood, with wooden wheels and axles, their creaking could be heard for miles across the prairies.

The first railroads west of Winnipeg were constructed by laying the ties on the prairie without grading, the work of filling in with gravel being done afterwards. As the road was built out to Stonewall, Portage la Prairie, Emerson or Nelson, these places became great trading centres, and large quantities of stoves and cooking utensils were sold to incoming settlers. At first all the stoves sent to the west were light,

R. J. Hutchings, Calgary
First Vice-President North-West Boards of Trade.

cheap sheet iron affairs, the heavy weight of the cast iron stoves preventing their transportation to distant points. On the prairies the absence of wood for fuel also required cheap stoves which would burn anything, buffalo chips being a popular substitute for wood.

Mr. Kennelly sold the first carload of cast iron stoves to go to Prince Albert in the Fall of 1882, they not arriving there until 1883, owing to the boat having to lighten itself to make the last trip, the water being low. The stoves laid all Winter on the river bank, covered with snow in the Winter and rust in the Spring. Low water and rapids were great obstacles to river navigation. All these difficulties necessarily increased the cost of the stoves, and the prices paid on the frontier in the early days would seem fabulous at the present time.

The Indians were considered harmless and no troubles were met with on that score by travelers, they being a respectable and manly race prior to the days of railway construction. Then, however, they were debauched, and there was nothing, not even their women, that the redskins would not sell for the white man's fire-water. Mr. Kennelly was in Regina when Louis Reil was brought in a prisoner in 1885. Quite a thriving trade was done by the Indians in collecting buffalo bones, hundreds of carloads being gathered from the prairies and used as fertilizer.

Amongst those met with in the early eighties many are now prominent merchants and public men, a large percentage of the successful hardware and stove men in Manitoba and the territories being former Ontario men. Hon. Robert Rogers, at present a member of the Manitoba Government, was an old customer of the McClary Co.'s at Clearwater, Man., while Hon. James Smart, of the Department of the Interior, Ottawa, was a traveler for the Smart Co., of Brockville, and later a hardware merchant at Brandon. Mr. George Merrick, now of Merrick & Anderson, Winnipeg, used to travel for D. Moore & Co., Hamilton, in the early days.

The picture of Smith & Ferguson's fine hardware store at Regina in last week's Hardware and Metal brought to Mr. Kennelly's mind that he had traveled west from Winnipeg with Mr. Smith in 1883. Mr. Smith chose to locate in Regina in spite of keen competition, and later became head of the present firm, taking in Messrs. Smith and Ferguson as his partners. Their building was the finest in the west when erected a decade ago, and even now is thoroughly up-to-date.

Ross Bros., Edmonton, brothers of Mr. J. F. Ross, can manufacturer, Toronto, were also remembered as going overland to Edmonton in 1882, with little besides their tinsmithing tools. To-day they have a splendid wholesale and retail hardware and stove business, and are rated high in commercial reports. Others who were spoken of as old-timers were: Alex. McBride, of Calgary, formerly of London; J. O. Cadam,

Hon. T. H. McGuire, Ex-Chief Justice, N.W.T.
2nd Vice-President N.W. Boards of Trade.

of Carberry, formerly of Port Dalhousie, and McPhail Bros., of Prince Albert, one of whom was killed during the rebellion in 1885. Thomas Tweed, recently elected as president of the Associated Boards of Trade of the North-

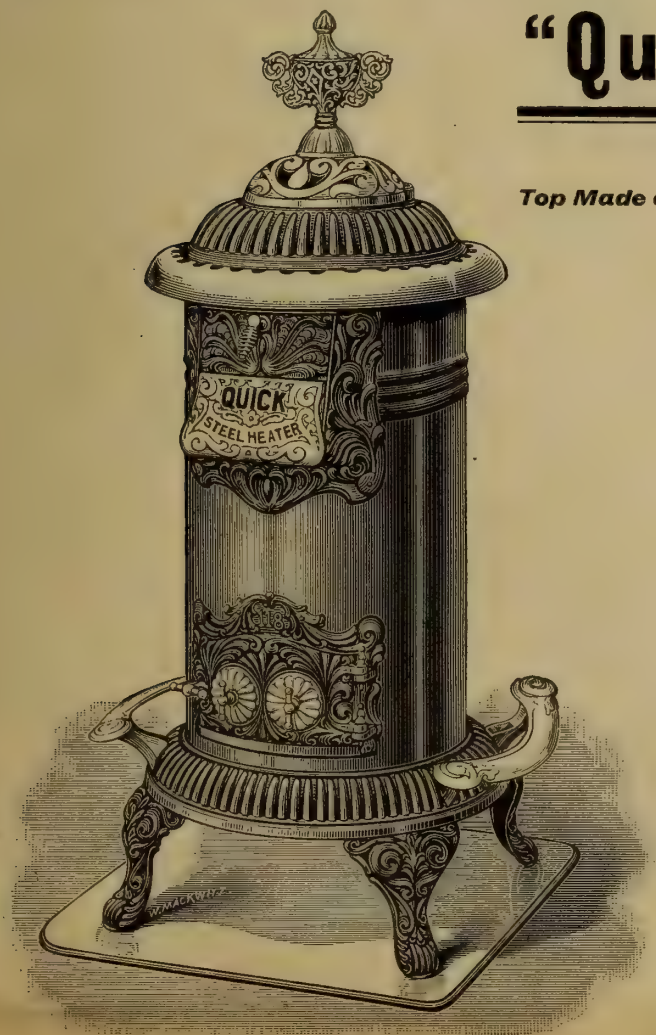
THE



Walker Pilot Steel Range

Among the many points of merit of this range is a solid cast iron reservoir with enamelled ware tank. This is attached at the proper end of the range, and rolling damper blade gives absolute control of it at all times. It is worth several dollars more than the contact reservoir, and yet our range sells at prices to compete with the ordinary kind.

SEND FOR CATALOGUE AND PRICES

THE WALKER STEEL RANGE CO., LIMITED
GRIMSBY, Ont.

"Quick Steel Heaters"

FOR COAL

Top Made of Steel ***Bottom Made of Steel*** ***Body Made of Steel***

It is lighter and stronger than stoves having these large parts made of cast iron. It saves breakage. It saves in freight charges.

All steel parts are made by machinery and dies. They are absolutely alike and interchangeable. A damaged or worn-out part is quickly replaced.

Steel Top and Bottom are of the same material as the body. Their expansion and contraction are alike; therefore they fit air-tight and remain so.

"Quick Steel Heaters" heat quicker because there is less metal to heat through than if they had cast iron top and bottom.

The Fire Pot, with air-slots running up inside, acts to keep the live fire on the OUTSIDE of the coal, thus radiating the heat rapidly.

The line is new, only one of its kind, and a good seller which pays the dealer a profit.

FOUR SIZES ***EXCLUSIVE AGENCIES***

WE ALSO MAKE AN ENTIRELY NEW AND COMPLETE LINE OF

"AIR-TIGHT WOOD HEATERS"

The Prettiest, Air-Tightest, Smoothest and Most Solid Line Ever Brought out—Prices are right.

DANCLER STOVE CO. DIV., CLEVELAND, O. U.S.A.

west Territories, was also spoken of as a successful hardware merchant at Medicine Hat.

Mr. Kennelly's early connection with the west makes him an interested observer of the wonderful progress being made by those who are aiding in the development of Canada's land of promise—the country of big things, of enterprise, and of golden wealth of grain.

TROUBLES MET IN SELLING STOVES.

THE following interesting paper was read by Mr. F. P. Hans, of Iberia, at the 1905 convention of the Missouri Retail Hardware Dealers' Association:

No stove or range ever made has of itself what is called a draft; that must be furnished by the chimney or flue, and even when the draft in chimney or flue is perfect, that is not all that is wanted to insure good work or good bread or biscuits; the other things necessary being proper setting up, good fuel, good material—and last, but not least, a good cook. I had a customer years ago who would never guarantee a stove to bake well, and when the lady would ask "Why won't you guarantee the stove to bake well, after saying that you know the stove is a good baker?" his answer would be: "I know the stove is a good baker, but I do not know if you know how to bake or not." And there is a lot that hinges on knowing how, in baking as in everything else.

High-Grade Stoves Made Most Trouble.

An old-timer told me that when a lady bought a cheap cook stove the chances were that she was going to use it herself, and if the top part of the oven got too hot, would place a paper over the bread or biscuit until enough ashes had gathered on the top oven plate or if the bottom of the oven got too hot, she would put a stove cover under the pan. On the other hand, when a lady bought a high-priced stove the chances were she would have a servant to run it, and if breakfast was late because she had been late in getting up to start the fire, her excuse would be that the stove would not draw. If, on the other hand, she got the oven too hot, or forgot to take out the bread or biscuit in time and they were burnt, the excuse would be the stove could not be regulated and at times I have found these excuses used under conditions mentioned.

Unreasonable Guarantees.

So, in making a sale, do not make any unreasonable guarantees or promises; do not say this stove or range, as the case may be, will do good work set up to any kind of an old chimney and with any kind of fuel; because you know it will not, no matter what may be its name or who may be its maker. To obtain the best results there is needed a good flue or chimney, proper setting up with pipe full size of collar on the stove or range and good fuel, and as stated before, a good cook to run it.

Stoves Should Be Set Up.

When possible, the dealer should set up every stove or range he sells and the man doing this work should not be the cub or the poorest workman about the place or shop. He should know enough about the business to know if the flue he is going to use has a good draft or not, and if not, should so tell the party buying the stove or range and if possible correct the trouble before leaving the job. If this were always done there would be fewer kicks afterwards.

Literature.

When the stove or range goes into the country where a man cannot well be sent to set it up, instruct them as far as possible how to set it up and what faults to avoid. Many of the manufacturers have booklets or circulars on this subject that they would be glad to furnish if they knew they would be used.

Good Chimneys.

A good chimney should be 8 x 8 inches inside, and the top of it should be a little higher than the highest part of the comb of the house, and should not have a tree overhanging the chimney, as is sometimes the case, and flue should end from 4 to 6 inches below the opening into which the stove pipe runs, and

William Trant.
Secretary N.W Boards of Trade.

should not run down to the floor or into the cellar where perhaps there is an opening into said flue without a cover or stopper of any kind; and remember putting up two or three stoves to one flue is like hitching up two or three wagons to a single team just large enough to handle one wagon easily.

Complaints.

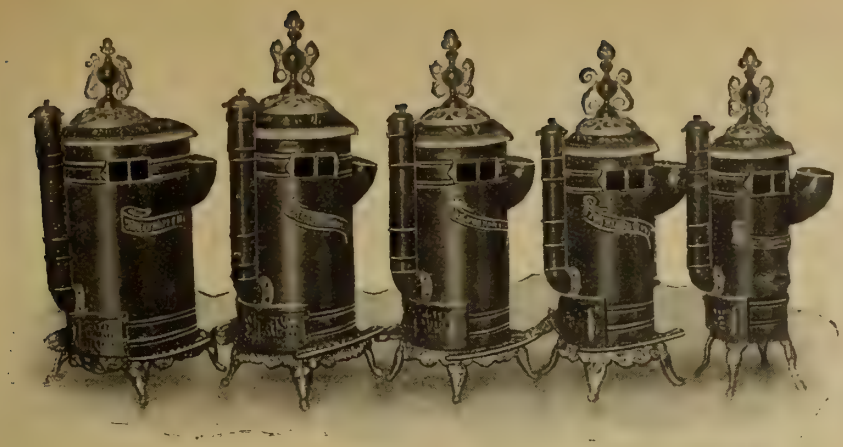
I suppose as long as stoves and ranges are sold there will at times be complaints made and when they come in they should be looked after at once, and it is well to go yourself or send a man who knows the business. The first thing I do in such cases is to fire up the stove or range to see for myself how it burns.

If you find the fire does not burn well, examine the flue and see if that has a good draft. If not, locate the trouble and remedy it if possible, because a good draft is absolutely necessary to good work. Next, look to the fuel and remember you cannot get a hot fire from wet or rotten wood, as the heat used in evaporating the water in green or wet wood is lost to the oven; nor can you get a hot fire from poor coal, especially when mixed with dirt. Then see that the ashes are kept away from the bottom of the fire and from under the grate, allowing the air to pass freely through the fuel, as air is as necessary to a fire as is the wood or coal, and a fire can no more burn without any air than you can live without air. All air entering into the fire box should pass under and through the fuel, as any air that passes over the fire checks it and at the same time cools the oven, so I would say always keep the damper slide in the front fire door closed, and it would be better (in my opinion) if no damper slide was put in the front fire door.

Fire Box Needs Air.

Get all the air necessary into the fire box by drawing out the hearth slide, as in so doing the air is put to the bottom of the fire where it belongs. But while air is necessary to combustion, like in everything else, there may be too much of a good thing. Only one-fourth of the air entering the fire box is oxygen, the only thing that counts, while the other three-fourths is made up of neutral gases that contribute nothing towards combustion but have to be heated at the expense of the oven; so that while it is necessary to admit all the air into the fire box that is needed to make the fire burn well, no more than is necessary should be admitted to keep the fire burning well. And as no two flues draw exactly, nor the same flue draws alike every day, but changes as does the weather, the amount of air to be admitted to do the best work can only be learned by experience, as any good cook will tell you, and that is why an oven will get hotter one day than another, using the same kind and same amount of fuel.

PROGRESSIVE STOVE FOUNDRY.



The D. Moore Co., Limited, stove and range manufacturers, with head office and works at Hamilton, Ont., and agencies at Winnipeg, Man., and Vancouver, B.C., have just completed the installation of modern and expensive machinery for the manufacture of steel ranges. The "Premier Treasurer" steel range will make a great addition to their already extensive line and will be received with favor by the stove dealers. This range is built to last. The body is made of heavy polished and heavy Superior steel, is riveted every 2 inches with steeple head rivets and strongly braced to prevent warping. All parts coming into contact with the fire are reinforced with asbestos millboard. The device for removing the duplex grates and linings is very simple, as is also the method for raising and lowering the front section of top.

This firm also manufacture a complete line of cast ranges, coal and wood cooks, base burners, oak stoves, etc., etc. Their advertisement will be found on another page.

Work has commenced on the New Manitoba Medical College at Winnipeg. Brick and cut stone will be used, the size being 95 x 115 feet, and two storeys in height. The contracts have been secured by: Mason work, Phil. Burnett; carpentering, S. B. Ritchie; plumbing, Standard Plumbing Co.; electric fittings, Mitchell & Co.

Keep the catalogues for future reference. You may need them any day.

Weed pullers should sell well these days.

SHERBROOKE'S ADVANTAGES.

LAST week the statement was published in various papers throughout the country that the Jenckes Machine Co., of Sherbrooke, Que., were to remove their plant and factory to St. Catharines, Ont., owing to special inducements being offered them by the last-named city. The item contained a mis-statement, as the company had merely decided to establish a branch at St. Catharines, retaining their main factory at Sherbrooke. Many of the papers publishing the original despatch from St. Catharines also published the correction as it appears in our department of Industrial Gossip this week.

The original item was so misleading that residents of Sherbrooke, which is one of the most progressive cities in Canada, took steps to correct the report emanating from St. Catharines, a prominent member of the Sherbrooke Board of Trade writing to Hardware and Metal as follows:

"The Jenckes Machine Co. decided several months ago that it would be expedient in the interests of their business to establish a small branch works at a western point to manufacture for their western trade only and have selected St. Catharines as a desirable location. Their Sherbrooke works will not only be continued up to their full capacity, but will in all probability be enlarged in the near future. There is no city in Canada possessing better general facilities for manufacturing than Sherbrooke. Excellent water-powers, splendid railway connections in all directions, six lines of railway centring here, a steady and reliable labor market, free from strikes and disturbances, where artisans have the combined advantages of city life with the delights of our beautiful surrounding country. The best evidences to offer in favor of Sherbrooke being an advantageous point for manufacturers is the fact that the Jenckes Machine Co. have been eminently successful here. Not many years ago they commenced in a small way, having received liberal municipal aid, and have enlarged their works from time to time, being now an important factor in the Canadian machinery supply market. Sherbrooke's industries, some of which are the largest of their kind in the Dominion, have been remarkably successful, and this fact alone would indicate that her industrial conditions are advantageous. Sherbrooke is the third city in the Province of Quebec, Montreal and Quebec only leading her. We have abundant room here for expansion and we are expanding. Our last annual increase, according to recent census, will compare favorably with any of the older cities in Canada, the increase being over twenty per cent."

OUTLOOK FOR LEAD.

There is plenty of hope for the future of the big silver-lead deposits of British Columbia, says the Vancouver World. Lead is yearly growing in value, its consumption being very heavy and widespread. At present there is a prohibitive duty on lead imported into the United States, but the Canadian market is rapidly developing, and the British Columbia industry will not always require a bonus to make it pay. The world's production of pig lead is annually about 880,000 tons, of which the United States produces 284,000 tons. About 35 per cent. of the lead produced in the United States comes from the Coeur d'Alene district, its production being about 86,800 tons per annum. The silver-leads are about the only fluxing mediums that will stand transportation costs to those points which require them as the vehicle for carrying down the silver and gold values of the dry ores. There is a brisk demand in Europe for lead ores at present. The chief value lies in the fact of their being the vehicle-carrying medium to the lead residues from the zinc smelters.

CARRIAGE SPRINGS & AXLES

ANCHOR BRAND

GUELPH AXLE WORKS

THE GUELPH SPRING & AXLE CO. LIMITED

GUELPH, ONT.

The Sarnia Hub, Spoke and Bent Goods Mfg. Company.

Sarnia, Ont.

We are prepared to fill any orders for

Heavy Wagon, Sleigh, Buggy, and Cutter Stock.

We make a specialty of heavy stock and can fill orders promptly. Made from the best of oak and hickory as we carry a large stock of lumber and can make any sizes that may be required. We make it a point to fill orders promptly.

If you are in need of anything in our line we will be pleased to hear from you and we will give it our prompt attention.

J. S. LOUGHEAD & SON, Sarnia, Ont.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 98)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, July 14, 1905

A GENERAL slackness in the trade is noticeable, but as it is prevalent each year at this time no anxiety is being attached to the change in conditions. During the past week wire nails have declined from 5 to 15 cents per keg. For some time concessions have been given in large sales, and in view of this natural quietness in trade a decided decline in price has been adopted. Orders are now being booked for such goods as sleigh bells, skates, Winter sporting goods, heavy horse blankets, etc. The booking of orders for barb wire, fence staples, axes, handles and lanterns has now subsided. Remaining shipments are now going forward, and in a very short time this part of the business will have concluded also.

A good trade is being transacted in all lines of sporting goods. Large orders are being booked daily for several patterns of rifles. Local wholesale dealers have been expecting a good trade in this line of firearm, and as a result a large stock is being held.

No change is noted in the strong demand for building paper, and manufacturers are of the opinion that sales this year will be considerably larger than those of the previous season. The season for poultry netting, spring hinges and green wire cloth has almost ended, and although a few orders are arriving, the trade is quiet comparatively speaking.

Axes—All orders have been booked, and it now remains for a few shipments to be forwarded, when the trade will assume a much quieter appearance. Our quotations are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Trade on this market has become much quieter, although some wholesale merchants expect to book a few orders late this Fall in connection with the lumbering trade. Prices are steady and remain unchanged. We quote as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—Certain brands of machines continue to have a popular demand. The season is, however, growing late, and dealers are looking forward to a falling off of this demand. We quote as follows: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—The majority of orders have now been booked. A few shipments have still to go forward. Prices are firm at the prices quoted below. We quote the following prices: Cold blast, $4.50; No. 0 Safety, $3.50.

Barb Wire—Booking orders has now concluded, and wholesale dealers are paying more attention to the shipping forward of orders, which will occupy some little time. Prices continue unchanged. Our quotation sare as follows: $2.75 for 100 lbs. f. o. b. Montreal; $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—Orders still continue to be booked, and trade in general has a bright appearance for this period of the season. We quote: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—No new feature has arisen in this market within the past few days. Prices are firm and continue unchanged. We quote as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Although reports state that the trade has a tendency to be quiet, manufacturers are shipping forward large orders. Manufacturers are keeping well up with the demand, except in the case where special sizes are ordered. We quote the following: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Machine shops are creating a good demand, and this, added to the demand originating from other natural sources, causes the trade to have a very bright appearance. Trade conditions are being fully maintained with the following discounts: Three-eighths and smaller, 60 to 10; seven-sixteenths and larger 55 to 5. Activity rules.

Wire Nails—Demand has become somewhat quieter, and in consequence the price has declined from 5 to 15 cents per keg. We quote the following: $2.10 to $2.20 a keg f.o.b. Montreal.

Cut Nails—Trade on this market can only be termed as being fair. A few orders are being received, but these are easily filled, as the stock held by wholesale dealers is large. Prices continue unchanged. Our quotations are: $2.20 a keg f.o.b. Montreal.

Horseshoes—Business continues to be light, and is expected to remain so until the cold weather sets in. Our quotations are as follows: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all sizes 0 to 4, $5.50; toe weight, all sizes 1 to 4, $6.75. Packing—Up to three sizes in a keg ten cents per hundred pounds. More than three sizes twenty-five cents.

Horse Nails—No change has occurred on this market during the week.

Sporting Goods—Large shipments of rifles of several patterns are going forward freely. Other goods still continue to have a good demand. Winter sporting goods are beginning to come into prominence, and it is expected that good trade will follow within a few weeks. Our quotations are as follows: Canadian-made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Although the carpenters' strike is still in progress, contractors, by some means known to themselves, have been fortunate in securing labor, and the building trade is progressing very favorably under the circumstances. The demand still continues to be good, and prospects are of good color.

Cordage—No change worthy of mention has occurred on this market within the past few days. Orders, similar in size to those of previous years, are arriving, and everything points to transacting a trade equal in volume to previous years.

Cement and Firebrick—The recent change in the tariff leads many local dealers to believe that the change in price, so long talked about, is at last about to occur. Prices have become much firmer, and reports state that Canadian producers are seriously considering the advisability of an advance. Orders are arriving freely, and the principal feature is the marked increase in the demand from the country. Our quotations are as follows: English cement, $1.80 to $1.90; Belgium, $1.60 to $1.90

per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $1.90 to $2.00. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—Trade conditions remain the same. Prices are firm. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Green Wire Cloth—The season is now becoming well advanced, and as a result trade has become somewhat quieter.

Poultry Netting—There is still a scarcity in certain sizes, but as the demand has decreased to a great extent, not much attention is being paid to this condition. Our quotations are as follows: Discounts for two inch nineteen gauge standard, and sixteen gauge extras, at 60 per cent.; finer meshes, 55 per cent.

Spring Hinges—Orders have nearly all been booked, and nothing is left except the shipping forward of a few which yet remain. Prices continue unchanged. We quote as follows: No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—A better demand is becoming evident, and this is expected to again increase as the season advances. No change has occurred on the price list. Our quotations are as follows: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, July 14, 1905.

NO falling off is noted as yet, and the lateness in gathering the hay may stave off the annual dog days, when the staffs of the jobbing houses take a rest from the strenuous life. The travelers representing the various houses will take their holidays during the next two or three weeks. Haying is reported to be on in earnest, the season having been favorable to a bumper crop—probably the greatest on record. The sales of mowers, scythes, etc., have been very large, and orders are still being filled.

Sporting goods are in demand, the call for ammunition beginning to pick up. Fishing tackle and camping outfits have met with a large sale.

Building supplies continue in strong demand, and this line will be the backbone of the trade during the balance of the Summer. Wire nails, screws, bolts, nuts, etc., are all having a large sale, the call for cut nails not being so great. Cement and other lines continue firm at the same prices.

Samples of "Bull dog" shovels, manufactured at Hamilton, are being displayed at jobbing houses and are meeting with favorable comment.

No changes in quotations are noted.

Lawn Mowers—Trade is falling off somewhat.

Sporting Goods—Guns and ammunition are in stronger demand, while fishing requirements are meeting with a large sale.

Washing Machines—Trade is reported very good for wringers and machines

Chain—Trade is in its normal state. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Business is considered very satisfactory. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Large orders are reported by the jobbers. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—A strong demand is reported at unchanged prices. Poultry netting is also meeting with a strong sale.

Barb Wire—Sales continue very large, and farmers are buying large quantities.

Wire Nails—Prices are unchanged. Demand is active. Nominal quotations are $2.25 f.o.b. Toronto.

Cut Nails—In some districts large sales are being made. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—A slackening off is reported owing to the warm weather. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—Demand during the Summer season is less active. Prices are the same.

Screws—Large sales are reported, but the supply is large.

Rivets and Burrs—Demand is reported good at unchanged prices.

Bolts and Nuts—A satisfactory trade is reported at unchanged prices.

Cordage—Binder twine and hay fork rope are in strong demand, and shipments are large. Prices are well maintained. Our quotations are as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—No change in prices is reported owing to the tariff changes. The increase in duty on packages has a tendency to strengthen prices, however, and we look for an advance shortly. Our quotations are as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Business is steady, with fair sales being made. Prices are firm. Our quotations are as follows: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper—Demand for goods is active. Prices are steady.

Hides, Skins, Tallow and Wool—The general advance in wool has been reflected in the local market. All wools have remained firm, with an increase of 2 cents in wool-washed fleeces. Lamb skins have advanced ten cents during the week. The market is devoid of special features apart from these changes. We quote as follows:

Hides, No. 1 green steers, per lb		0 10
" " 2 " " "		0 09
" No. 1 green, per lb		0 09½
" " 2 " " "		0 08½
Country hides, flats, per lb	0 08½	0 08¾
Calf skins, No. 1, selected		0 10
" " No. 2		0 08
Deacons (dairies), each		0 80
Sheep skins		1 25
Lamb skins, each		0 55
Shorn pelts "		0 45
Rendered tallow, per lb	0 04	0 04½
Unwashed wool, new clip, per lb		0 15
Wool-washed fleece		0 25
Pulled wools, super, per lb	0 21	0 23
" " extra "	0 22	0 24

For Manitoba, British Columbia and Maritime Province markets see following pages.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, July 14, 1905.

A MUCH firmer state of affairs is prevalent on the market at this point. Numerous metals have had a marked advance during the past few days. Antimony has advanced from 1 3-4 to 2 cents per pound. Conjectures are numerous, but the best reason for this continued advance is probably due to the fact that since the beginning of the war Japan has been unable to work her mines. The war has also had some effect upon the exporting from the Chinese mines. This leaves almost the whole demand centred upon the output of Cooksons, in Great Britain, and probably the output has failed to compete favorably with the demand, which has resulted in the advancement in the price.

Galvanized iron is used for so many purposes that the demand has increased to proportions which have never been reached before in the history of the trade. The demand for Canada plates and tin plates is increasing again, and some large orders have been booked. The output of tin is so limited that many local business men interested in the trade are beginning to believe that a few investors have gained control of the market. At any rate, the market price has advanced during the week, and there is still good prospects for another advance.

Ingot zinc has also advanced, while pig lead has become much firmer. Large orders have been absent from the market during the past few weeks. Small orders have been numerous, and a great number have been booked for pig iron. A large percentage of these

orders have been received from Ontario, while the rest are local.

Pig Iron—A large number of small orders have been booked recently. These orders have been received from foundries, and owing to the low price many foundry men are using pig iron where they otherwise would use scrap. Prices are steady, and no change is expected. Our quotations are:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.50 to 19.00	"	"
Clarence No. 1	17.50	"	"
" No. 3	17.00	"	"
No. Cleveland	17.50	"	"

Bar Iron—The market still shows a tendency to be easy. Although no decline has as yet occurred it would not be surprising if one took place shortly. Our quotations are as follows: Merchant bar, $1.80; horse-shoe iron, $2.02 1-2; forged iron, $2.05; best refined iron, $2.20 net cash thirty days.

Tool Steel—The recent awakening in the trade has worked wonders, and the trade is making better progress now than it has done for some time. The demand at the present time is greater than it has been for some time, and the prospects regarding future trade are very bright. Our quotations are as follows: Colonial and Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—Only a fair trade exists on this market. Prices continue unchanged. Our quotations are as follows: Sleigh shoes, $1.97 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.10; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold-Rolled Shafting—The demand originating from the machine shops throughout the Dominion is something well nigh marvellous. Everything points to a good demand, and the prices, accordng to some reports, are expected to advance. We quote: Cold-rolled shafting, 3-4 inch to 17-16, $3.85 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Canada Plates—Some large orders have been received from the manufacturers of galvanized and enamelled ware. The demand is increasing, and as far as can be learned is likely to continue so for some time. We qoute as follows: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized, 52's, $3.90 to $4; 60's, $4.15 to $4.25.

Galvanized Iron—The sales of galvanized iron are much more greater this year than in any year previous, owing to the fact that it is being used for many purposes hitherto unknown to the mechanical world. Prices are very firm, and it would not be surprising if an advance in price took place any moment. Our quotations are as follows: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra.

Black Sheets—Good prices are maintained in the majority of sales, and conditions in general are very active. Prices are firm. We quote as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—During the week the price of antimony has advanced from 1 3-4 to 2 cents per lb. Since the opening of the war nothing has been exported from either the Japanese or Chinese mines, and probably the demand has been too great for the output in England, resulting, as it has done, in an advance. Our quotations are: 13 1-2 to 14 cents.

Sheet Zinc—The market has become very firm, and although no change has as yet occurred, an advance may take place. We quote the following: Cask lots, $7; small lots, $7.25.

Tin Plates—A stronger demand has originated with the manufacturers of tinware, and conditions to-day are much more active than they have been for some time. Our quotations are as follows: Cokes, $3.75; charcoal, $4.

Ingot Tin—It is believed, owing to the limited output of this metal, that the market is well controlled by a few investors, which probably results from the recent advance of 1-2c. per lb. We quote: 33 1-2 to 34c. per lb.

Ingot Copper—The market still remains firm, in fact so firm that it is impossible to receive a concession when purchasing. Present indications point to the continuation of a strong market. Prices remain unchanged. Our quotations are: 16 to 16 1-4c.

Ingot Zinc—The market, which was easy last week, has firmed up again, and to such an extent that prices have advanced 1-4c. per lb. The market is strong and active, and prices are expected to remain firm and steady. We quote the following: 6 1-4 to 6 1-2c.

Pig Lead—Conditions have not broken in any way, in fact, if there is any change conditions are firmer. Some dealers are asking as high as $3.75 for a ton of lead, but the majority still cling to the old figure, namely, $3.50 to $3.60 per ton.

Boiler Tubes—The demand for boiler tubes continues to be of a good variety. Prices are firm, but no advance is anticipated. Our quotations are as follows: British and American tube, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12 1-4; 3 1-2 inch, 16c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Scrap Metal—This market, unlike other metal markets, has become very quiet, and judging from the general decline in prices, trade has become dull. This dullness is more particularly noticeable in the case of scrap iron, which is hard to place owing to the large amount of pig iron that is being used where the scrap material was previously used. Machinery cast scrap, wrought scrap and stove plate scrap have each declined 1-2c. per lb. Old rubbers have become much firmer and have advanced 1-4c. per lb. We quote as follows: Heavy copper and wire, 12 3-4c.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to 9c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove-plate scrap, $9; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-2 to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, July 14, 1905.

THE market exhibits no very important changes this week. Business in all lines is very fair. Tin still continues on the advance, and the high price is causing a good deal of hesitation on the part of buyers in placing anything but small orders. For lead there is an active demand, and there is an upward tendency to the market. The demand for copper is good, but prices are running pretty close. Antimony is still on the advance, but no changes in prices are noted on the local market. The price of antimony is twice what it was at this time last year, caused, of course, by the increased demand from Russia and Japan.

Pig Iron—Prices remain firm and unchanged. The ordinary business is being done. We quote:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Sales are very fair, and prices are being maintained. Our quotations are as follows: $1.85 f.o.b. Toronto, with discount of 2 per cent.; for extras as cut to length, while rolling, 2 feet and over, 10c. per 100 lbs., 1 foot and under 2 feet, 15c.; under 1 foot, 20c.; over 20 feet, by special agreement according to length and size.

Tin—The advancing price is causing hesitancy in buying, except in small quantities. There has been no further advance this week on the local market. We quote: 34 to 35c. per lb.

Tin—An advance of 30c. per hundred is reported during the week. Buying is active and prices very firm. We quote: 34 to 35c. per lb.

Galvanized Sheets—Conditions are unchanged, the demand being heavy.

Tin Plates—Firmer prices are reported with the demand strong.

Canada Plates—Goods are being called

LAFARGE (non-staining) CEMENT

For all purposes requiring the best quality.
It is "deadflat," well galvanized, true to gauge and specially soft for working-up. We guarantee every sheet bearing our brand.

C.F. JACKSON & CO., Limited
Wholesale Merchants
Ormidale Block, Vancouver, B.C., and Liverpool, England
Direct Importers of:
Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc. etc

for in fair quantity. Prices are the same.

Brass—Trade continues active and prices firm. Discounts are 10 per cent.

Lead—There is a very active demand, and an upward tendency to the market. We quote: Pig lead, $3.80 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter — Conditions are unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—The demand is good, but prices are being run pretty close. We quote: Ingot copper, 15 3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—There has been no further advance on the local market this week, but the existing price holds firm. The price of antimony is twice what it was at this time last year. Our quotation is 14c.

Old Material—There is a distinct improvement in the market generally this week, but prices remain unchanged. Dealers buying prices are: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Dealers are booking orders for Fall delivery, their stocks being fairly large. We quote: Anthracite in cars at bridges: Grate, $5.05 per gross ton; egg, stove and nut, $5.30 per gross ton; pea, $3.70 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

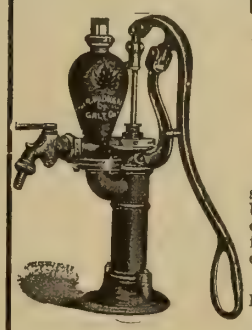
Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKET.

Advance proofs furnished HARDWARE AND METAL by The Iron Age, July 13, 1905.

THE monthly statistics of pig iron collected by the Iron Age show some interesting facts. Production of coke and anthracite pig fell off from the record of 1,964,000 tons in May, a month of 31 days, to 1,793,000 tons in June, a short month. The greater part was due to the restriction of the operations of the steel companies, whose product declined 136,000 tons, while the output of the merchant furnaces fell off only 35,000 tons.



The active capacity has undergone a sharp decline, having receded from 443,092 tons on June 1 to 408,617 tons on July 1.

The statement of stock of the merchant furnaces, which refers to a monthly product ranging from 650,000 to 675,000 tons per month, shows a further accumulation of 70,000 tons in June,

added to 63,500 tons in May and 17,400 tons in April. During the last quarter, therefore, the stocks in the hands of merchant furnaces have accumulated to the extent of 151,000 tons, against a reduction in stocks during the first quarter of 83,800 tons. As an offset there must be considered the undoubtedly considerable decline in the unknown stocks in the yards of consumers, of the foundries and of the mills.

The records of the past few months show that while the iron industry possesses a wonderful capacity for adjusting itself to changing conditions it was not possible to check the headway gained during the extraordinary demand which developed in anticipation of Spring. The industry is well in hand now, and consumption is proceeding at a wonderful rate, which the contemplation of the spurt in the Spring should not obscure.

There are many inquiries for foundry and forge pig iron in the market, but the amount of tonnage booked continues small. There are reports of moderate lots of low phosphorus pig iron, gray forge and foundry iron being placed, but the volume has not been large enough to take weak sellers out of the market, and southern iron has sold on the basis of $10.75 at Birmingham for No. 2, with reports of even lower prices.

The run of business to the structural mills is very heavy, the American Bridge Co. alone having taken 25,000 tons during the past week, the largest order being one of 6,500 tons for the new building of the United States Express Co. in this city.

The pressure for deliveries of structural material is so heavy that according to some reports orders have already been sent abroad. Premiums are being paid for prompt delivery and there is a disposition in some quarters to agitate for an advance in the base prices.

After a lull extending over some time car orders are again appearing in the market. Two western roads are calling for steel cars, which would require about 100,000 tons of material.

The eastern skelp trade is showing some signs of revival. In the west an order for 600 miles of pipe for an oil line from Kansas to the Gulf is looming up.

In the bar trade an interesting transaction is the sale of 2,000 tons of twisted bars, taken by a Pittsburg mill, for reinforced concrete.

Additional business is in sight for the steel rail mills, and in the wire trade the first indications of a revival of buying have been noted.

LONDON METAL MARKETS.

From Metal Market Report, July 12, 1905.

Pig Iron—Middlesboro No. 3 foundry is quoted at 45s. 4 1-2d, and Scotch warrants at 49s. 4d, making prices as compared with last week 1 1-2d lower for Middesboro and unchanged for Scotch warrants.

Spot Tin opened strong at £142 15s., futures at £141 5s., and after sales of 140 tons of spot and 240 tons of futures closed strong at £143 for spot and £141 10s. for futures, making price as compared with last week £2 12s. 6d higher on spot and £2 2s. 6d higher on futures.

Spot Copper opened quiet at £66 2s. 6d, futures £66 5s., and after sales of 25 tons of spot and 50 tons of futures closed quiet at £66 for spot and £66 5s. for futures, making price as compared with last week 2s. 6d higher on spot and 1s. 3d lower on futures.

The market closed at £13 11s. 3d, making price as compared with last week 2s. 6d higher.

The market closed at £24 2s. 6d, making price as compared with last week 5s. higher.

Nova Scotia Trade News

Halifax, N.S., July 10, 1905.

THE attention of the hardware trade is now centered on metals. The market is very firm and prices are advancing. Sheet zinc and ingot tin are attracting the most attention, as they were advanced in price during the week. Sheet zinc is now quoted at 7¼c. by the cask, and 7¾c. for smaller quantities. The advance is brought about by the manufacturers, who nave put up the price. Ingot tin is quoted at 35 to 36c., which is said to be the highest price here for a long period.

White lead has advanced 75c. per 100 pounds. This is due to the change in the tariff on raw material. These prices have been advanced by the manufacturers, but not locally.

Business continues up to expectations. Haying tools are selling freely, and collections continue fair. So far the advance looked for in nails has not taken place. Turpentine is firm at former quotations, also oils. Some good sales of bar iron are reported. Sheet lead is selling freely at $4.75 in rolls, and $5.75 for lesser quantities. Builders' materials continue in good demand, and prices are steady.

LAST MINUTE PAINT MARKETS

Office of
HARDWARE AND METAL
Toronto, July 15, 1905.

Turpentine has been reduced to 90c. for single barrels, and 89c. in four barrel lots.

Linseed oil has also dropped 1 cent from the standing quotations.

On Thursday of this week the annual meeting of the Maritime Hardware Association will be held at Digby, N.S., when it is expected that a general revision of the price list will be made. The retiring president is H. H. Sterns, of the firm of H. H. Fuller & Co., Halifax. It is expected that the new president will be a St. John man.

The Londonderry Iron & Mining Co.'s blast furnace, at Acadia Mines, is running in first-class order, and is turning out about one hundred and ten tons of No. 1 iron daily. Representative English capitalists have made a proposition to the City Council of Sydney to establish a shipbuilding plant and other works, involving an expenditure of twenty millions, if given a free site, exemption from taxation for 20 years, free water and running rights over the I.C.R. from Coxheath to the terminal pier.

For the past several days operations have been going on at the Sydney Cement Co.'s works with a view of adjusting the mechanical details. Some cement has been produced, and the experiments so far have been eminently satisfactory. A New York cement expert is expected shortly, when the final tests will be made, after which the works will proceed with the manufacture of the marketable material. It is expected that these tests will occupy a fortnight.

Great activity prevails around the colleries of the Nova Scotia Steel Co. at Sydney Mines. The general superintendent estimates the output for 1905 at one million tons. During every working day last month more coal was mined at Sydney Mines than in any single day last year. Two large new steaming boilers are being placed in No. 3 colliery and also a new Walker compressor, which will, when installed, more than double its present output.

The Cumberland Copper Co. will, it is expected, soon commence work on their property at Wentworth, N.S. The company, which is composed principally of American capitalists, owns ten square miles of property.

THE C.M.A. AT BIRMINGHAM.

(By Our Own Correspondent.)

Birmingham, 29th June, 1905.

THE visit of the Canadian Manufacturers' Association to Birmingham excited the keenest interest, and both our visitors and the large number of leading citizens that gathered to entertain them seemed to be most favorably impressed with one another. The visitors were formally welcomed by the Lord Mayor (Alderman Beale) in the Council House, but the great event of the day was the luncheon given by the Birmingham Chamber of Commerce at the Grand Hotel, in the course of which Mr. Chamberlain delivered a most inspiring forty minutes' speech upon Imperial interests and obligations. The right hon. member for the western division of the city was in his happiest mood. While pre-eminently a business address, urging, as few like Mr. Chamberlain can urge, the duty of Imperial commercial intercourse and mutual concessions for the general weal, it was interspersed with the happiest banter as to British parochialism, and the need for thinking imperially upon international questions affecting the commercial relations of Canada and England. "Let us buy of one another" was the phrase Mr. Chamberlain submitted as an appropriate motto for his hearers, and the great British commercial communities on either side the water. Mr. McNaught made an admirable response, and his aspiration that the day was not far distant when trade would be reciprocal as well as preferential between Great Britain and the colonies, was received with great applause.

* * *

Mr. W. Kerr George, as president of the Canadian Manufacturers' Association, made a most spirited reply in response to the Lord Mayor's words of welcome in the Council House, and almost created a furore by the statement that those in whose name he spoke would co-operate in trying to work out some plan which might strengthen and make permanent for all time the bonds of

sentiment that bound the widely-scattered portions of the Empire together, rather than build up and develop commercially antagonistic countries. That, he believed, was Mr. Chamberlain's policy, and if that was his aim, he thought he was safe in saying that he could offer to Mr. Chamberlain the practically unanimous support of the Canadian people.

* * *

When your countrymen return I think their visit to Birmingham will be found to be not the least pleasing of their recollections of their visit to the Motherland. Birmingham was certainly delighted with her Canadian guests.

* * *

The gradual absorption of the unemployed into the ranks of the workers shows that gradually, and it must be confessed only very gradually, is the trade of the district recovering itself. The memorable feature of this year's trading in the Midlands is certainly so far the expansion of the bicycle industry. The reduction of the standard price of good machines to eight pounds has been followed by an enormous demand, and it is anticipated that the balance sheets of the leading firms in Coventry, Birmingham, Redditch and Wolverhampton will prove most satisfactory reading for their very numerous and very patient shareholders.

To-day's iron market displays no new features.

PERSONAL MENTION.

Mr. Hadden, of the Hartney Hardware Co., Hartney, Man., was in Winnipeg last week.

Work on the new Wells hardware store at Fort Francis is progressing rapidly. A large warehouse is also being built.

Canadian Rubber Co., of Montreal, purpose running a picnic for the benefit of their employes on Saturday, July 15.

Mr. J. M. Taylor, of the Taylor-Forbes Co., Guelph, was in Toronto on Tuesday inspecting their new temporary offices.

Col. Pellatt, Toronto, has been elected a director of the Dominion Iron & Steel Co., in place of Mr. B. F. Pearson, of Halifax.

Craig Bros. & Co. have sold their hardware store at Franklin, Man., to R. B. Hamilton. Mr. W. N. Halpenny is manager.

The partnership existing between Joseph Ash and W. C. Mack, Sarnia, as painters and decorators, has recently been dissolved.

Mr. Henry Clucas, Toronto, representative of the Canada Paint Co., is making a holiday trip to Goderich and upper lake points.

S. T. Kempthorn, of Oliver & Kempthorn, Saskatoon, is making a holiday trip to the east, and will spend a month at Whitby, where he formerly resided.

The Francis Frost Co., paint manufacturers, are looking for a site at Toronto Junction, where they may locate their factory and erect a $10 000 building.

Mr. Samuel Schwanz, of Schwanz Bros., retail hardware dealers of Rocanville, N.W.T., was in Winnipeg this week on business with the wholesale trade.

Mr. M. R. Summerfelt, Mount Albert, and W. Kirkland, traveling representative of the Kennedy Hardware Co., took part in a successful fishing expedition last week.

The Crescent Bicycle Co. of Winnipeg, have purchased the entire stock of bicycle sundries and parts kept by the Marshall—Wells Hardware Co., who are giving up that line.

Mr. E. M. Smith, of the railroad department of the Canadian Fairbanks Co., Montreal, is spending this week in Cleveland and Detroit, transacting business in the interests of his firm.

Mr. J. Laporte, a traveler for the wholesale hardware firm of Sybold, Son & Co., Montreal, intends on July 17 to take unto himself another half. We wish Mr. Laporte much joy and happiness.

Mr. J. P. Sybold, of the wholesale hardware firm of Sybold, Son & Co., Montreal, is spending his vacation at Pronts Neck, in the State of Maine. Mr. Sybold reports having a very good time.

Mr. W. G. Jones, treasurer of the Pease Foundry Co., Limited, Toronto, visited Winnipeg last week, consulting with the management of the affiliated firm Pease-Waldon Co., Limited, of Winnipeg.

Mr. H. L. De Wolfe, formerly manager of the Vincent Valve Co., Boston, is now connected with the Canadian Fairbanks Co., Limited, as manager of their valve and steam specialty department, and will be located in Montreal.

Mr. J. A. Burns, of Munderloh & Co., of Montreal, is spending his vacation at Old Orchard Beach, and in Portland City, Maine. Mr. Burns, who has been absent from the city for about a week, is expected back in a few days.

Mr. F. J. Irwin, who for the past number of years has been closely connected with the office staff of the Massey-Harris Co., Limited, at Winnipeg, has resigned to accept a position with the Munro Wire Works Limited.

Charles Fergie, general manager of the International Coal Co., a well-known coal-mining engineer, has accepted the position of superintendent of mines for the Dominion Coal Co., succeeding Mr. Austin King, who recently resigned.

Last Saturday the employes of the London Bolt & Hinge Works, and their friends, to the number of about 150, held their annual picnic, the party going by 'buses to the beautiful summer residence of their employer, Mr. John White.

Mr. J. W. Richardson, of Caverhill, Learmont & Co., Montreal, is touring the eastern part of the Province of Quebec on a pleasure trip. Mr. Richardson, who has been on his vacation for some few days, is expected to return early next week.

Mr. Jas. M. Robertson, a director and manager of the Thos. Robertson & Co., wholesale plumbing supply house, of Montreal, is in Chicago this week on business. Mr. Robertson will return via Detroit and Toronto, remaining at each of these two points for a short time.

Mr. Paul R. Hanson, who has been with the Canadian Rubber Co., of Montreal, but a short time, was on July 1st appointed sales manager over their sales department in the branch office on St. James street, Montreal. Mr. Hanson was formerly with the J. C. McLaren Belting Co., and joined the first mentioned company but a short time ago.

Mr. P. D. McConnell, formerly of the Hobbs Hardware Co., of London, has engaged himself with Frothingham & Workman, Limited, of Montreal, as one of their western travelers. Mr. McConnell's territory reaches from Toronto westward and as far north as Georgian Bay.

Mr. A. E. Peters, president of the Record Foundry & Machinery Co., Limited, of Moncton, N.B., left on June 28 on an extended tour through the Southern and Western States, and will return by way of Vancouver, Calgary, Winnipeg and Toronto. Mr. Peters intends being absent about six weeks.

George Kast, a plumber and gasfitter, who had been working in Hamilton, suicided by taking carbolic acid at Niagara Falls on July 10. He asked his wife to get him a glass of water, and as she turned to get it, he said, "Goodbye, Jessie," and drank the acid from a bottle. He was about 25 years old.

British Columbia Trade News

Vancouver, July 15, 1905.

An increase of capital stock from $150,000 to $500,000 has been determined upon by the big hardware firm of McLennan, McFeely & Co., Limited. The announcement appears in the current issue of the Provincial Gazette. The large interests now represented in the trade of the firm has made this step necessary. In the north the company has always been a leader in the trade of the Yukon, and the senior member of the concern, Mr. R. P. McLennan, has spent most of his time for several years giving his personal attention to the Dawson business.

Quite recently the contract for supplying all hardware for the construction of the new Spence's Bridge, Nicola Lake branch of railway, has fallen to the company, and that, with the general increase of business, has decided the step announced. Some additional capital has been interested in the company, but otherwise there will be little change. On a fine block of property 175 x 125 feet, on the corner of Cordova street and Columbia avenue, which the company has held for some time, it is the intention to erect very large wholesale premises, at a cost totalling $125,000 or more. Trackage facilities on the C.P.R. and central location will make it an ideal site. It is 20 years since the business of McLennan, McFeely & Co. was established.

J. A. Flett, one of the old hardware merchants of Vancouver, has taken new premises in a block recently completed on Hastings street, not far from his former location, which he has occupied for years. In the new place Mr. Flett has fitted up the handsomest retail hardware store in the west. Seldom are shop fixtures and fittings quite as tasteful seen in a hardware store indeed. The arrangement of the new store is largely the idea of Mr. R. A. Ogilvie, manager for Mr. Flett, and the results reflect great credit on Mr. Ogilvie's originality and taste in matters of attractive display and decoration. To give all the floor space possible, the counters are arranged at the back, while extra wide counter ledges below the shelving on the sides gives room for showing goods. Attractive showcases are ranged along the side. The large stock so attractively displayed is very complete, and the selection is excellent. In builders' hard-

ware and metal work the firm is equipped especially, paying particular attention to that branch, and keeping a large staff of men employed on roof and building metal work.

It took two years to find or secure a block of stone large enough to top the mausoleum of a California millionaire, but the order has been filled at last from the Newcastle quarries, Vancouver Island. The piece of stone is 14¼ ft. x 8¾ x 2½ ft. and weighs 17½ tons. A fifty-ton crane has been set up to lift the stone, which is to be shipped at once. Thirty years ago the stone for the San Francisco mint was taken from these quarries, which have been idle nearly ever since. They have now been re-opened.

Record shipment of heavy machinery is claimed for the speed with which a big steam shovel for the Northern Mines Co., Limited, of Spruce Creek, Atlin, traveled from Toledo, Ohio, to the coast. On June 2 it was shipped from Toledo, where it had been made to order. On June 19 it was in the C.P.R. yards here, and on the same day it was shipped on the steamer Amur, which luckily was in port bound north.

The Atlin company which is going to use the shovel are anxious to get it in for the short Summer season's work, and no wonder, for advices received the day the big shovel went north stated that the pay-dirt, which was in the meantime being shovelled out by hand, was running $5 to the cubic yard. Naturally they could not wait.

The city has too many skilled artisans in various branches of the building trade, say the Trades and Labor Council. This body has sent a circular to the Toronto Trades and Labor Council. The action is asserted to be as an offset to advertisements alleged to have been put in eastern papers by certain Vancouver employers who wish to see wages reduced. The labor men say that many men are out of work, because of the influx of newcomers. At Labor Hall many of these new arrivals inquire for work, and all seem to have a wrong impression as to the demand for men.

The carpenters' and joiners' union has notified the builders that hereafter they will expect to be paid in cash instead of cheque, urging that many men have to go to saloons and bars to get their weekly pay-cheque cashed, and are thus placed in temptation or forced to spend money they do not wish to. The notice also stipulates that the payments must be made on or before Saturday noon each week. The carpenters observe a Saturday half-holiday here.

Building conditions are very active at present in the city, a large amount of new work going on, and quite a percentage of it being business blocks of substantial proportions. Material, especially lumber, is hard to get in sorted orders, owing to the activity of shipments to the Northwest, this, of course, being the heavy shipping season for lumber to that market.

The announcement has been made that the contract for the new Dominion building for Vancouver has been awarded to Messrs. Kelly Bros., contractors at Winnipeg, at a sum approximating $400,000. The building is to be located on a prominent corner close to the C.P.R. depot and overlooking the water front. Construction is expected to commence at once.

This week has been marked by several very important events in trade circles. The larger in point of public attention attracted is, of course, the visit of the members of the American Institute of Mining Engineers, who are touring the mining areas of the west, and visited Victoria and Vancouver en route to Dawson and the Klondike. They were entertained early in the week at Victoria, and yesterday spent a pleasant holiday in Vancouver, being received at luncheon by the Vancouver branch of the Provincial Mining Association, which organization also had in hand the entertainment at Victoria. The Provincial Government granted a sum of money to assist in the expenses of entertainment, and leading business men in both cities also joined in generously. For the expenses of the entertainment in Dawson and on the creeks of the Klondike district, the Dominion Government has made a special appropriation of $5,000.

Mr. Colin F. Jackson, president of the Vancouver branch of the Provincial Mining Association, presided at yesterday's function, and in extending the hearty welcome the association wished to give the visitors he pointed out the opportunities which existed in this province for safe, profitable and satisfactory investment in mining enterprises. He emphasized the advantages possessed by British Columbia in having such large quantities of all sorts of mineral wealth, and of the necessary auxiliary products that the conditions were very promising and would be permanent as well as increasing in importance. He felt sure that great direct benefit to mining in British Columbia would result from the visit of such an important body of mining men.

Mayor Buscombe proffered the freedom of the city to the visitors and expressed his gratification that it should fall to his lot to make the address of official welcome. He felt sure they had recognized the premier advantages of Vancouver commercially and industrially, and he, too, thought that the visit was an epoch-marking incident.

Mr. R. P. McLennan, former mayor of Dawson City, where he is still largely interested, on behalf of the northern capital presented the invitation to the members of the Institute to visit the world-famous gold camp of the Arctics. He had just returned from Dawson, where he had had the pleasure of presiding as chairman over the first meeting held a few weeks ago to consider the form of entertainment to be tendered the Institute when they should arrive. He told of the list of unique attractions on the programme it was proposed to present. One of these was a baseball match scheduled to commence at 12 p.m.

Dr. Raymond, for 25 years secretary of the Institute, replied to the various addresses in a speech which bristled with good things. Not only is the veteran a mining man, but a born orator. Referring humorously to the old-time movement for the union of Canada and the U. S. under one flag, he said that was now a dead issue, but he had a much better proposition—the union of the two countries under two flags. At 10 o'clock last night the touring engineers left Vancouver for Skagway on the first stage of their northern trip, by the C.P.R. steamer Princess May, the top-liner of the northern fleet, which has no rivals in the struggle for speed supremacy. Returning the party will reach Vancouver on the 23rd inst., and will leave for the east the same day.

The other important occurrence in trade circles was the arrival on Wednesday night from Australia of Mr. J. S. Larke, Canada's trade commissioner to the sister commonwealth. This is Mr. Larke's first return to his own country since his appointment ten years ago, and, as he himself expresses it, he is coming in great measure to get in touch with the wonderful progress the Dominion has made in the decade of his absence.

Naturally, striking first, Mr. Larke was astonished at the strides the terminal city has made in advancing to her destined position as a great emporium of trade and industry. By special request the Vancouver Board of Trade this morning held a meeting for the purpose of receiving Mr. Larke and hearing some valuable suggestions from him with regard to building up and extending trade with the Australian commonwealth. Many matters of interest and importance were touched on in the conference, and the merchants and others present derived great benefit from the practical suggestions of the commissioner.

There are many ways in which trade can be extended, but Mr. Larke in particular points out what has been accomplished, as indicating what can be done. He exampled the Massey-Harris Co., which controls 50 per cent. of the implement trade of Australia, and of the bicycle trade also. This company, however, first undertook the Australian trade in the year 1895, when they sent their first representative to the Antipodes. A systematic campaign has ever since been kept up.

One point Mr. Larke makes, that trade should not be solicited and orders received unless the manufacturers are prepared to maintain a supply after demand has been created, and perhaps a trial order or two has been received. The opposite course has a very bad effect on the whole proposition of promoting trade, for disappointment in one line begets aversion to making other experiments. Australia is an enormous consumer of manufactured goods, and imports almost altogether at present, especially in machinery and similar lines. Special care and effort on the part of manufacturers will be amply repaid in the business to be obtained. In lumber, especially, the market is open for greatly increased exportation from this province. Mr. Larke leaves for the east this afternoon.

The troubles of the miners of Nanaimo, in which the whole business interests of the coal city are involved, remain in an unsettled state yet, as the miners have turned down, by overwhelming majority, the company's proposal of compromise. It is said that the present difference between the men and the company does not amount to more than three or four cents per ton on the cost of mining the coal. The business situation in Nanaimo is very correctly described as critical. The past two weeks over 800 men have left the place, most of them coming to Vancouver and proceeding up-country to seek work on the new C.P.R. short line being built from Spence's Bridge to Nicola Lake.

The Mountain Mills, as the lumber concerns in the interior of the province are known, in contra-distinction to the Coast Mills, have formed a selling company to handle their output in the Northwest. This is to prevent price-cutting. Two similar concerns handle large part of the coast shingle output

and some lumber, now. It does not mean that there is any danger or likelihood of prices being raised, but that uniform prices are more likely to obtain.

* * *

Very large water propositions are being exploited in the Yukon, where many districts are suffering from want of water to get the dumps washed in the season, and thus produce their results. The Dominion Government has sent an engineer, W. Thibaudeau, to investigate sources of supply and report on methods of transmission. He will gather data from big hydraulic companies now working and will make exhaustive surveys.

The Acklen-McKenzie Co. has in hand a big flume or ditch which will bring water round Moosehide mountain, opposite Dawson, and will ultimately have 40 miles of ditches or flumes. The system will cross the mountain and bring water from Twelve-mile creek. Other concerns are also engaged in enterprises to bring the necessary water on to large areas of mining claims. It is the one important problem to-day in the north.

* * *

Disposal of sawmill refuse is a problem with many mills in the City of Vancouver. Ald. Heaps, head of E. H. Heaps & Co., says his company is building a burner which will cost $20,000. It will have an automatic sprinkling device which will assist in keeping down the dust and cinder portion of the nuisance inevitable with a refuse burner.

* * *

General Manager Buntzen, of the Vancouver Power Co., has addressed the City Council and Board of Trade, asking co-operation in attracting industries to this city and vicinity now that 30,500 h.p. of electric energy generated by water power is available at low rates. The matter is to be systematically advertised.

* * *

Commercial men are greatly interested in the proposition of the Vancouver Board of Trade to remove the tax imposed by the Provincial Government of $50 on all travelers whose houses do not carry stock in the province, provided the Dominion Government will, in return, impose a duty on lumber imported into Canada. The resolution, adopted at a meeting this week, is to be sent to other boards of trade for endorsement. The point was brought up in connection with the telegraphic report from Ottawa that the Dominion Government was likely to ask the Provincial Government to voluntarily withdraw the obnoxious tax.

* * *

Northern freight is moving rapidly now, as a result of the coming into effect of the special commodity rates on goods shipped north to Dawson, Atlin, and other points, in the six weeks between July 1 and Aug. 15. This plan of giving a special rate, which is a ten per cent. cut from regular freight tariff to Dawson, on the White Pass Railway and river steamers, is working so well that the northern railway has made it an institution. It has the effect of getting much better service for all concerned, and shippers get their goods forward surer, as they have to make the stipulation in buying that they be given the chance to secure the special freight rate, which in itself is an item of considerable importance. Ten per cent. off the big rates applying in the north means a large sum total.

"Eastlake" Metallic Shingles will surely interest your neighbor who has just had the wood shingles on his roof ripped off by lightning.

No wise man would ever want to use wood shingles again when the lightning, fire, rust, and storm-resisting qualities of "Eastlake" Metallic Shingles are once made evident to him.

All around you new buildings are going up and old ones being repaired. Why let other dealers supply the shingles, etc., when the trade, at a good profit, is yours if you will go after it and show people who have given the matter little thought the advantage of "Metallic" building materials over wood?

OUR NEW $10,000 CATALOGUE

We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto, Canada
303

We also manufacture:
"Metallic" Ceiling and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, Etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetroughs and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 14, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

HARDWARE AND METAL is authorized by the management of the Vulcan Iron Works, Limited, to deny the newspaper rumor that they intend starting a branch in Calgary. Manager Barrett spent a few days in that western city not long ago, and his presence there occasioned the rumor referred to.

* * *

Vice-president C. N. Rudel, from the Montreal headquarters of the Canadian Fairbanks Co., was in Winnipeg early in the week consulting with the management of the Winnipeg business.

* * *

Everything points to a highly successful convention of the Retail Hardware Association, to be held in Winnipeg July 26 and 27. As the convention is held during the exhibition week, hardwaremen attending the meetings will have the advantages of cheap railway rates.

* * *

Values throughout are steady this week, and business in all lines of general hardware is very brisk. Warm weather has given an added impetus to building operations in city and country, and building supplies are moving in very large quantities. Owing to the duty on white lead announced in the budget speech last week there has been a local advance.

* * *

Screen Wire Cloth—Price, as before, is $1.55 per 100 square feet.

Poultry Netting — The demand is slackening now, but sales this season have been larger than ever before. We quote:

24-inch roll, perroll			$1 20

86 to 90 "	14.75
91 to 95 "	17.30
96 to 100 "	

LOOK THROUGH OTHERS' EYES.

Did you ever think of standing on the other side of the street and viewing your place of business from the standpoint of a customer? These days are the time to get outside your store and yourself and take a critical look at both. Suppose you came to town from the country would the appearance of the store fronts appeal to you? Don't you think the store with the clean, newly-painted front would catch your eye first? Of course it would, and after you got inside, if everything looked clean and worthy, you'd probably decide to make the store your trading place.

Foundations are now being laid for a new building for the Northern Electric Co., at Winnipeg. The property, covering an area of 550 feet by 50 feet, has been secured by the company for a two-storey building. A factory, machine shop, stores department and offices will be included in the new structure, which will be erected this Summer, it is expected.

SUCCESSFUL HARDWARE STORES

WESTERN CANADA'S hardware stores are well up to the standard set by the progressive stores in the east and, indeed, according to the reports of observing commercial men, and, judging by the two stores illustrated in the three photos reproduced herewith, the west is not content with merely following, but, with true border spirit, is aiming to lead the rest of Canada in artistically and serviceably arranged hardware store interiors.

Wells & Emmerson's store at Port Arthur has been occupied since 1901, although the firm were established about 20 years ago when Port Arthur was still in its swaddling clothes. The strong faith in the west shown by the members of the firm has been justified,

S. A. Clark's Hardware Store, Saskatoon.

the development of the twin towns having been remarkable and the future looking exceptionally bright just now.

Their business has kept pace with the development of the town, and it is only a couple of months since that Hardware and Metal noted the branching out of the firm into a plumbing supply business in addition to their already large wholesale and retail trade in hardware, stoves and tinware, as well as plumbing contracting. The Emmerson Block is centrally located and constructed of sandstone and pressed brick, being thoroughly modern in all its appointments. It is heated by hot water and an Erickson hot-air pump supplies water to the lavatories, the floors and walls of which are tiled, as are also the hallways and main entrance.

Port Arthur's Handsome Store.

It is of the interior, however, that we desire to write, the illustrations showing the two sides of the store, which is 34x87 in size. The ceiling, as will be seen, is of metal, painted white and blending into a blue tint, fancy electric lights providing illumination. On the left side is shown a magnificent display of stoves and tinware, the ranges, stoves, heaters, gas stoves, etc., being tastily arranged and being mounted on trucks allowing their easy moving in order to show to customers. The shelves allow the carrying of an immense stock of tin and enamel-ware and show the various lines off to good advantage. In the foreground, hockey sticks and curling stones remind one of Winter, while in the rear, brooms, whips, brushes, pulleys, tools and scales are conveniently arranged. Handsome business offices will also be seen in the rear of the store.

The right side is devoted to general hardware, and it would be hard to find a better arrangement of shelving, counters and general display than illustrated here. The shelving is known as the Warren Patent Glass Front Cabinet Sectional Shelving, being purchased from the manufacturers in Chicago. The shelving is interchangeable and so arranged that any part can be taken out and fitted into another part of the store. Wells & Emmerson were the first hardware firm in Canada to introduce this shelving.

A prominent position is given to cutlery and silverware, the carving sets and flatware being well displayed along with a line of revolvers in the glass showcase, while on top and in the glass shelving behind, safety razors, fancy lead pencils, hollow silverware, lamps, gas and electric fixtures and fancy globes aid in giving the customer a good impression upon his entry into the store. The neat display of samples of shelf hardware on the boxes and the orderly display of boxed goods, saws and rifles also provide a background which does not deteriorate from the first impression. The prominence given to door knobs and builders' hardware indicates the attention given to the building development of the growing towns, while the display of small tools, paints and oils, axe handles, etc., in the rear, and the method of showing samples of rope, carries out the general up-to-date appearance of the store and does credit to Mr. J. T. Emmerson, the partner who has control of the store, Mr. Wells, the senior member of the firm, residing in Winnipeg.

Pioneer Store at Saskatoon.

Mr. S. A. Clark's hardware store at Saskatoon, shown in the accompanying illustration, also does credit to the proprietor, the general appearance being very orderly and tasty, and the ceiling, ornamented by metal roofing, being kept clear of unnecessary goods. In addition to the ordinary lines carried in stock, Mr. Clark shows his progressiveness by carrying silverware and cream separators and giving these lines prominent positions where they will be seen by all visitors to the store. Equally important also is the line of washers, etc., shown in the centre of the floor.

The arrangement of the counters and display of shelf hardware on the right and of stoves and tinware on the left is very creditable, while the plan of bringing the rope up from the cellar through auger holes in the floor, and the method of showing the lamps, paints, tools, etc., in the rear, carries out the general effect of orderlyness. That Mr. Clark also employs system in his bookkeeping can be taken for granted when it is seen that he has set aside and partitioned off an office which has a commanding view of the store interior.

Some Straight Store Suggestions.

Seek to lead, not to follow. Don't let your excuse for having something antiquated be that "Jones has it." Formulate ideas that others will envy. Don't copy those of a moss-back. He may be a man of letters, but his methods are those of the past.

Read the advertisements of others. Notice what your neighbor says of his goods, and how he says it. Then model your own ads. a little differently and make them distinctive of you and your store. If they're not a success, solicit the aid of some one and lend your ears

to the experience of your fellow-man, raze old fogy traditions, eschew ancient methods whose death-knell has long since been tolled, and wake up to the times.

Read your trade journals. Question the drummer before he departs. He's just the one to give you some happy suggestion or bit of timely news. Ask him what merchants are doing in other towns. Build on the ideas of others. Pay your respects to your contemporary on the corner below. Don't just borrow his goods.

Leave the store for an hour to-day and take a turn about town. Go through the shops, peer into the windows, see what is going on around you, and keep conversant with the progress of the times.

Have system in all things. From the store room over-head to the cellar under-foot. A place for everything and everything in its place. Put style and life into your window displays. Make radical changes in their get-up. Don't be loth to part with the old schemes when they become old and time-worn. Give your fixtures a periodical coat of varnish. Sweep the cobwebs from the lofty corners. Down with the spiders, and out with the flies. Make your store look cheerful. Keep up with the times.

The counter may hide your shoes, but it doesn't screen your linen. So if you rob Peter, pay Paul; keep a polish on your linen and a smile upon your face. Don't let petty trials be pictured there. Keep all the common wants, and never be "just out" of any of them.

Don't cover your floor space with boxes of merchandise and various impediments to comfort. That's not indicative of an up-to-date store. Let there be an open passage. Give your patrons freedom of movement and yourself a chance to clean the floor daily.

Be liberal with your clerk. When he forwards a suggestion listen. Don't taboo it as unworthy a trial. It may seem a little mythical, but let him see you appreciate his care. Encourage him to take an interest in the store. If he wants to try an experiment, help him. Assist him to build a mite to the advancement of the times.

Wire cloth and fly killers are selling fast. Are you getting your share of the business?

ONE carload hard carbon pitch now in our warehouse. Canadian General Electric Co., Limited, Peterboro'. (28)

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for additions, &c., Post Office, Calgary," will be received at this office until Monday, August 7, 1905, inclusively, for additions and alterations to the Post Office, Customs, &c., building at Calgary, N.W.T., according to plans and specifications to be seen at the Department of Public Works, Ottawa, Ont., and at the office of Paul Paradis, Esq., Resident Engineer, Calgary, Alta.

Tenders will not be considered unless made on the printed form supplied, and signed with the actual signatures of tenderers.

An accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, equal to ten per cent (10 p.c.,) of the amount of the tender, must accompany each tender. The cheque will be forfeited if the party tendering decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,

FRED. GELINAS,
Secretary.

Department of Public Works,
Ottawa, July 5, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (29)

REGINA HEATING CONTRACT.

The Regina School Board have accepted the heating and ventilating specifications submitted by the Pease-Waldon Co., of Winnipeg, for the Victoria School, which will be a 12-room building similar to the Alexandra School in Winnipeg. The Smith & Ferguson Hardware Co. will instal the system, the specifications calling for two Pease Economy steam heaters and ventilators, two ranges of flushing closets and one range of glass urinals.

Potato bugs are getting busy. Are you pushing Paris green?

It won't pay to carry over any screen doors or windows. Now is the time to dispose of them. Merchants having a large stock on hand should ginger up.

Hammock time is here. Jobbers report a large call for the medium-priced goods and a fair demand for the fancy lines. Cheap ones are slow sellers in most places. They don't last.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Vitrified Clay Conduit for Postal Pneumatic Tube System of Canada," will be received at this Department until Thursday, July 20, 1905, inclusively, for furnishing 22,000 lineal feet of vitrified clay 4 duct multiple conduit, as per specifications of John Galt, Chief Engineer.

Specifications can be seen and forms of tender obtained at this Department, and at the office of the Chief Engineer, Toronto.

Tenders will not be considered unles made on the printed form supplied and signed with the actual signatures of tenderers.

An accepted cheque on a chartered bank, payable to the order of the Honourable the Minister of Public Works, for five hundred dollars ($500,00), must accompany each tender. The cheque will be forfeited if the party tendering decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By Order,

FRED GELINAS,
Secretary,

Dept. of Public Works,
Ottawa, July, 8, 1905.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (28)

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Armoury at Guelph, Ont.," will be received at this office until Monday, July, 17, 1905, inclusively, for the construction of an Armoury at Guelph, Ont.

Plans and specification can be seen and forms of tender obtained at this Department or on application to the caretaker of Public Building, Guelph, Ont.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent (10 p. c) of the amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By Order,

FRED. GELINAS,
Secretary.

Department of Public Works.

Ottawa, June 24, 1905.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it. (28)

——TO BE OBTAINED FROM——

F. W. LAMPLOUGH & CO., 9 De Bresoles St., MONTREAL

Stove Excellence

We believe the

Empire Queen Range

stands for more stove excellence than any other stove on the market at the price. The flues of this range are constructed on the most modern principles, the heat being spread uniformly on all sides of the oven, making perfect baking possible. The Fire Box is perfectly proportioned to the size of the oven and fitted with separate grates for wood and coal, which can be changed with little effort. The Ash Pan has effective chutes to prevent ashes from falling other than into the pan. The

Empire Queen Range

is endorsed everywhere. The symmetry of the various parts, the smooth castings and elegant trimmings, and the fact that the Range is easy to keep clean, are features which would make any buyer endorse it. Send for illustrated booklet ***to-day.***

PAINT, OIL AND BRUSH TRADES

PAINTS IN THE HARDWARE STORE*

By J. H. Sayward, Haverhill, Mass.

PAINT is one of the composite parts of the hardware business instead of, what a great many people have thought and still think, merely a side line. We necessarily go after the house owner for his finishings in the line of hardware throughout, and in doing this we necessarily have a splendid opportunity to sell, or at least try to, the paint. I presume that you do not expect me to spend very much time on the topic of paint and its divers divisions, but more particularly on the most important division, prepared paint for inside and outside painting.

Confidence in the Goods.

Confidence is a very essential requisite in making a thorough success of the paint business as well as anything else; that is, confidence in the manufacturer from whom you purchase and in his ability to make good goods, and confidence in your own ability to instill into your customer your own thorough belief in the advantageous qualities of prepared paint over the much-mooted lead and oil.

I appreciate the fact that many of you here sell paint and my entire line of talk will be along the supposition that lead and oil is the competition with which we meet. Ability to thoroughly instill into your clerks your confidence in the product you purchase is a very important factor and, furthermore, they should be thoroughly competent to instill that same degree of confidence into the prospective customer. I fully realize that this is a pretty stiff problem for us all, yet we are very dependent on our clerks, and, as a matter of fact, from my own point of view, their thorough familiarity with the product is of even greater importance than my own.

Practical Experience.

I do not know of any better way of demonstrating to you the advisability of paying attention to the paint end of the business than by giving you a brief outline of my own experience. As you all know, I have been in business for a great many years, and up to 1898, although I had handled paint for a number of years previous to that time, my paint purchases, aside from lead and oil, were very small.

In 1898 my lead sales were probably from 12 to 14 tons per year. In 1904 I possibly sold 4 tons. From a profit point of view, without my entering into it, you will note that the returns from lead sales were extremely small and, in fact, it has been contended, and rightfully so, for a good many years that you practically roll 15 per cent. out of your store with each keg of lead, and oil and turpentine would appear in the same category.

The Follow-up System.

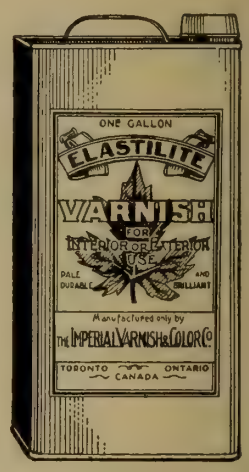
In 1898 I had an opportunity to take the agency of a reputable paint manufacturer, a concern who not only manufactured first-class goods, but also firmly believed in effective advertising and system in following up. I first visited the factory and spent some time in satisfying myself that the paint was what they claimed it to be. Instead of using my own methods I adopted theirs to a very great extent, and with the advertising which I have always done have reaped the reward not only in increased sales but in increased profits as well. From this concern I purchased in 1898 $496 worth of goods, increasing my purchases year by year, until in 1904 I bought 842 per cent. more paint than in 1898, while there had been a decrease of 71 per cent. in my lead purchases.

Figuring my gross profit on lead in 1898 at 16 per cent., I made $230, whereas, figuring 33 1-3 per cent. on paint, my net returns were $1,560 in 1904. Therefore, you will readily see that attention to this important branch of our business pays.

Advantages of Prepared Paint.

I have always made it a point to use a pencil to a very great extent in demonstrating to the prospective customer why he should use prepared paint instead of lead and oil, pointing out very clearly the fact that he should acknowin using prepared paint, in case of any difficulty he has simply the dealer and the manufacturer to look to. In case of difficulty we find the reputable manufacturer ready to listen to his troubles through the dealer, whereas with lead and oil there is practically no redress and never has been.

Paint Mixed by Painters.



I have also pointed out the fact that the painter is obliged to go to the manufacturer and buy the several ingredients contained in the paint, and such being the case, why is it not feasible that the manufacturer of the several ingredients should be in a better position than the painter to incorporate these ingredients by machinery? A paint mixed by the painter from lead and oil is more expensive than a good paint purchased from the dealer, for the reason that although it costs more per gallon it costs less per quantity. In other words, it will take one-third less prepared paint to paint a house than a paint made from lead and oil; consequently you have appealed to the man's pocket, and your reputation as a mer-

Montreal, July 14, 1905

DRY weather has been an indirect cause for the increase in the sales of Paris green, and athough wholesale dealers were somewhat dubious a few days ago respecting the outlook, conditions have now changed, and this market has assumed a bright aspect. Stocks on hand are not excessive in any one house, but it is expected that the amount on hand will outlast the demand. Prices on account of these conditions may advance at any moment.

The sharp advance in the price of white lead, caused by change in the duty, has come as a surprise to the trade. A change of some sort has been expected for some time, but it was never entertained by the most pessimistic that the change would be so great. Orders have been somewhat less frequent in arriving, and it is supposed that retail merchants are holding off, waiting for a steadier condition on the market.

Turpentine still continues to fluctuate daily, and numerous reports are afloat regarding the cause. If prices do not decline before the end of the month it is highly probable they will remain firm during the rest of the season. Linseed oil, although fluctuating also, is showing a decided tendency to become firmer, and a slight advance is anticipated. The decline in price of both turpentine and linseed oil is only temporary, caused by recent fluctuations, and another advance is anticipated. Castor oil has been steadily advancing on the foreign market, and two distinct increases have occurred. No change has as yet taken place on this market, but one is expected any time. A general quietness, which is always prevalent in the months of July and August of each year, is now existing.

Canadian Paris Green — Barrels, 15 1-4c.; arsenic kegs, 15c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16 1-2c.; one pound packages, 17c.; half-pound packages, 19c.; one pound tins, 18c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Pure English Paris green, petroleum barrels, 15 1-4c.; arsenic kegs, 15 1-2c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16 1-2c.; one pound paper boxes, 17c., one pound tins, 18c.; one-half pound paper boxes, 19c.; one-half pound tins, 20c. Terms, 2 per cent. off thirty days, or ninety days net from date of shipment.

Turpentine—Single barrels 90c. per gallon; two to four barrels, 89c. per gallon. For smaller quantities than barrels, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Raw, one to four barrels, 51c.; five to nine barrels, 50c.; boiled, one to four barrels, 54c.; five to nine barrels, 53c. f.o.b. Montreal. Net 30 days.

Ground White Lead — Best brands Government standards, $5.50 to $5.70; No. 1, $5.25 to $5.45; No. 2, $5 to $5.20; No. 3, $4.75 1-2 to $4.95; No. 4, $4.50 to $4.70, all f.o.b. Montreal.

Dry White Zinc—Pure dry in casks, 7c.; in 100 lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb kegs, 6 1-2c.

Putty—Pure linseed oil $1.75 to $1.85. Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish — Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4c. to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—No change has occurred on this market. Prices are steady. Our quotations are: American prime white 14 1-2c., American water white 16c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, July 14, 1905.

WHITE lead has advanced 75 cents per hundred pounds, as announced last week, this advance being made by most dealers, some even quoting $1 of a rise. While some jobbers are understood to have good stocks, bought at low prices, none are known to be selling under the new quotations. Red lead and dry white lead have advanced in the same ratio to white lead, but no changes in the prices of paints are looked for at present, the matter being now in the hands of the tariff commission and the manufacturers having a fair quantity of goods in process of mixing.

Paris Green is being sold in enormous quantities, some of the wholesalers having been cleaned out more than once and having to secure additional stocks from the mills. Paints are also in surprising demand, increased business coming in place of the expected falling off in July. The call for glass is reducing stocks, while imports are small. The heaviest

Crude Petroleum—Conditions are unchanged. We quote: Pennsylvania, $1.29; Ohio, 84c.; Somerset, 81c.; Indiana. 88c.; Canadian, $1.27.

Glass—See current quotations at the end of this issue.

WINDOW GLASS—MONTREAL.

The unusual activity in building circles has not allowed the demand for window glass to abate during the months of July and August, as in former years, and the demand is still as strong as that of a few weeks ago. Arrivals of new glass are not as frequent as was expected a few days ago by some of the leading wholesale dealers. During the warm months in Belgium the glass workers generally quit operations until the cooler weather. Local dealers fear that this is the case, and that the more prominent markets have purchased up all the available stocks, leaving very little for this market. General conditions are beginning to assume a more serious color, and it is now a question of whether there will be enough stock on the Canadian market to supply the heavy demand which is bound to arise before the close of building operations this Fall. We quote: First break, 50 feet, $2.00; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 feet, $4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

PRODUCTION OF STEEL IN JAPAN.

THE increasing production of steel in Japan is due to the Imperial Steel Works at Wakamatsu. These works are turning out rails, bars, plates and angles in quantities, and machinery is being ordered for the production of telegraph wire, rivets, bolts, nuts, etc. At present the whole of the production goes to meet Government requirements. It may be safely said that but for the war most of the rails imported during the past year would have been manufactured in Japan at the Imperial Steel Works. It is stated that about 18,000 tons of 60-lb. rails were manufactured there for use in building the military lines in Korea, besides many thousand tons of lighter rails. The United Kingdom's share of the rail import to Japan is reduced to 10 per cent., and as anticipated in that legation's report for 1903, the largest share in the trade has fallen to America. Imports of wire nails, however, have increased, probably because a native factory has practically ceased working.

---

A New Revolver!

MODEL 1904

H. & R. Double Action
Model 1904
38 Caliber
also 32 Caliber
6 Shot.

A solid frame revolver following the pleasing lines of our famous H. & R. Automatic, and which we are supplying in place of the American Double Action, as made by us for more than twenty years.

SPECIFICATIONS

32 caliber; 6 shot; 2½ inch barrel; weight 16 oz; C. F. S. & W. cartridge; also S. & W. Long and Colt New Police Cartridges.
38 Caliber; 5 shot; 2½ inch barrel; weight 15 oz.; C. F. S. & W. cartridge.
FINISH—Nickel or blue. We can also furnish with 4½ and 6 inch barrels.

ledge the ability of the manufacturer to take lead, zinc, turpentine, dryer and tinting colors and thoroughly assemble same by formula and machinery much better than the average painter could take the same ingredients and mix them together by the rule of thumb and paddle. Furthermore, it has always been my contention that a painter in buying several different articles has the corresponding number of concerns to contend with in case of difficulty, whereas chant backed up by the reputable manufacturer's goods handled by you should clinch the argument.

A Complete Line.

I carry a complete line manufactured by this concern, and when a customer mentions paint I try to find out first what is to be painted and then proceed to sell the customer a special paint that is made for that particular purpose, and by doing so I show the customer I am interested in giving him what is right. When he finds out on using the goods that I was right and the job is even better than he expected that man is sure to come again for paint or anything else he may need in my line. I also display in a prominent place in my store all the different kinds of paint I have, and keep my windows talking paint nine months out of the 12. In many other ways I keep reminding the public that I sell paint, and long before the painting season opens I have sold paint for several houses. I keep a record of each color of the house paint as it comes in, and it helps me to a great extent in ordering a new supply, as I can determine very quickly just how much of that particular kind I have sold in any given time.

A Useful Record.

I keep a record, a card index, of all the paint sold for outside painting, entering the date, quantity, different shades, and weather conditions, and in that way am not only able to determine when the paint was applied and under what conditions, in case of difficulty, but also have a means of interesting the new customer, for by referring him to or showing him where I have sold paint to Bill Smith and John Brown, men with whom he in the majority of cases is well acquainted, I impress upon him the fact that there must be some virtue in it or these men would not use it, and in this way I am also able to refer to houses which in many instances have been painted for a number of years.

The works of Scarfe & Co., varnish manufacturers, Brantford, have just been greatly enlarged by the addition of a new warehouse with a capacity for storage of about 100,000 gallons. This will make these works amongst the most commodious and best appointed in the province, and the addition is a witness to their growing trade. The firm of Scarfe & Co. has now been in existence for thirty years, the business having been founded in the seventies by Mr. W. J. Scarfe and continued since 1891 by his sons. The lines the firm are making have long since secured the approval of the trade and are known to be of strictly reliable quality.

Safety razors ought to sell well during the Summer camping season. They are easy to carry and can be used where an ordinary razor can not.

WALL PAPER

A CANADIAN WALL PAPER LINE.

A REVIEW of the samples of the Staunton line of new wall papers for the season of 1905-'06 proved quite a treat, and Bookseller and Stationer was much pleased with the general excellence of the collection, which is comprehensive, attractive and artistic. The low priced styles are pleasing in design, bright and snappy in coloring, and show careful attention to an endeavor to make them acceptable and serviceable. For kitchen is

No. 1662.—An artistic stripe in beautiful color combinations; the handsome drapery design of frieze being emphasized by cutting edge to a scallop. Manufactnred by Stauntons Limited, Toronto.

shown a good granite in several natural colorings, and a tile pattern that will make a record in selling qualities, as the design and the superior colorings are very good.

For bedrooms are shown a number of very pretty styles, really remarkably attractive goods for the price, while in the next better grade is shown a number of extremely bright florals in natural colors. Several patterns deserve special mention. One, a design showing a

To Owner
Cut Book
Page 94
Card

bunch of violets arranged in graceful freedom over a lace stripe, with a two-band border showing a festoon of violets on a drapery of lace. Another is a dainty floral in a stripe treatment, with a border so designed that it can be cut out or scalloped, which adds much to the beauty of the decoration. Another decorative paper shows sweet-pea blossoms carelessly yet artistically arranged; the colorings are particularly effective and enhanced by a water silk background. Each of these patterns is offered in several bright, cheerful colorings, every treatment being equally good, and in a variety to suit all tastes.

A novelty in frieze decoration is a graceful floral festoon so drawn that it may be scalloped, which adds materially to its effectiveness when used with plain stripe and stencil hangings. This frieze has a special silk moire ceiling, and is also produced in a range of colorings to match silks, velours and ingrains.

Halls and sitting-rooms are well provided for, even in the low priced goods, and the dealer certainly has a remarkably strong range of well proportioned hall designs with two-band borders in tapestry and textile effects to choose from, while for the sitting-room there is shown a collection of floral, classic or ornamental, patterns that are very complete. Many of the blanks are shown only in that grade, and the dealer can easily complete his general selection in better goods from exclusive patterns which are not repeated in the cheaper grades. Careful attention has apparently been given to make the offering of moderate priced papers adequate in variety and pattern, while the colorings include many of the novel treatments in background effects that heretofore have been brought out in high-class goods. The decorative value of a wall paper should determine its retail value, not the wholesale cost, and the showing of medium priced goods is really a leading feature.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by Our Ad. Expert, TORONTO.

NOTE—Herein are discussed the principles and practice of advertising. Subscribers are invited to send our Expert specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

STOVE ADS. IN CANADIAN PAPERS

A PERUSAL of Canadian papers convinces one that hardware merchants are advertising very liberally. Stoves get a goodly share of attention, and stove advertisements in Canadian papers are usually praisworthy in get up.

J. Brundrett & Son, Port Hope, run a snappy little "reminder" advertisement on the Imperial Oxford Range, which shows up prominently and appeals well for its size.

Garden & Co. occupy a fair-sized space in the Woodstock Review, which they devote principally to the Standard Oil Stove. Convincing statistics are given and an illustration, suitable in size and quality, employed.

Wells & Emmerson, Port Arthur, like J. Brundrett & Son, push the Imperial Oxford Range, though in a much larger space. Wells & Emmerson's advertisements are well written. These merchants evidently read up and cull from the maker's booklets.

The Moose Mountain Star is the medium John R. Mears, Arcola, takes to bring his steel ranges before the people. He handles the Monarch, Canada, Stewart and Happy Thought ranges, and employs liberal space in his talks. Mr. Mears knows the value of appealing to the farmer.

J. B. Hawkins, Goderich, is another hardware merchant who believes in publicity. He pays considerable attention to aluminum oven utensils, and is willing to pay newspapers to bring his wares before the public.

Some very attractive advertising is done by the Best Stove Co., Peterborough. The inauguration of a rebate check system in connection with their business is the nucleus of their advertising just at present.

"Well-displayed advertising" is what I would call the advertisements of Haney, Strathroy. He advertises the "Model" Wickless and "Boss" stoves, and gets down to the root of the matter in his details. These advertisements are ably assisted both by type and borders.

J. Moxon & Son, Picton, have a simple but effective plan of advertising oil stoves. No illustrations are used, but the datum is to the point, and "one thing at a time" is always kept in view. These advertisements are easily read.

"Telephone City Stoves, Limited," appears below advertisements on Jewel and Gas Ranges in the Brantford Expositor. The plan mainly adopted in these advertisements is that of making testimonials the argument. There is an individuality to this advertising.

J. H. E. Vrooman, Sunderland, in large type advertisements tells about "Boss" Stoves and Gurney-Tilden Souvenir Stoves and Ranges. These advertisements catch the eye quickly.

Conn, of Tilsonburg, keeps the public's attention on his stoves in advertisements distinguished for their straightforwardness.

Keys & Morrison, Lindsay, share the large type idea with Vrooman, of Sunderland, but their style of advertising is more general. Stoves play a big part in their advertisements.

The Grand Idea Range is the subject of advertisements written by Mahon, of Hintonburgh. Mr. Mahon wastes no time on preliminaries. He describes his stoves.

The Canadian Heating & Ventilating Co., Limited, Owen Sound, run some striking newspaper advertisements. The Empire Queen Range is described fully, and its merits brought out in strong terms and bold type. A good illustrations is used.

Allan J. Ross, also of Owen Sound, attempts to prove the Imperial Oxford the best gas stove on the market in what, typographically speaking, are finished advertisements. A balanced white-space effect is produced, and every word is clear.

Stove advertising is a class of publicity that well repays study. It is a good field for activity because there is a constant demand for stoves; but it is one thing to advertise and another to advertise in the most profitable way. Sometimes in preparing stove advertisements merchants overlook the salient points. There are quite a number of illustrations employed that are next to useless. The poor quality of the illustration is itself sufficient reason for its rejection, but the drawback in many cases is the plan of illustrating, not the quality of the illustration. What is the object in illustrating a whole stove? Most people know what stoves look like without giving them pictures on paper reduced in size. No merchant would now think of illustrating a spade in his advertisements, though there was a time when it was proper to do so. Spades are pretty much similar in design and pretty nearly uniform in dimensions, though there may be variations in quality. You cannot show the quality of wares by illustrations. That was never the intention. While stoves are approximately similar in size and style, there is a vast difference in interior constructions. These differences is what should be illustrated, not the doors and legs and lids, which, for all practical purposes, are the same to the buyer.

Some stoves have special attachments; illustrate these attachments. Other stoves have specially constructed ovens; illustrate these ovens. Other stoves, again, have fuel-saving grates; illustrate these grates, and so on. One thing illustrated, and illustrated well, with explanatory details lucid and complete, will have more selling force than a general illustration, which tells nothing, does nothing, but takes up space that has to be paid for.

Another point which merchants sometimes forget is that women (as a rule) not men, buy stoves. The argument which convinces a man will not necessarily convince a woman. A man, too, may drop into a store by chance and make a purchase. A woman generally plans the thing, figures it out to cents. It is obvious that advertisements to appeal to women must not only have facts, but facts that they can quickly revolve in their minds and quickly weigh. References to the names of the makers, general excellences, etc., are of secondary importance in these cases. If it is a coal range that is being advertised emphasis should be placed on the two most important things from a woman's standpoint — the oven, the grate. If it is a small gas stove, the number of burners, the space the stove occupies. Everything in connection with these particular parts should be laid bare in clear, simple terms.

When it comes to the kitchen women are just as close buyers, and as cute as horsetraders. No merchant would think of trying to sell a horse on the ground of its being chestnut in color and having a good mane. The merchant would know that the chief points would be those concerning the horse's teeth and feet. What teeth and feet are in a horse deal, when a man who "knows" is buying, ovens and grates are in a stove deal when a woman who "knows" is buying.

I like the booklet sent by Jas. S. Lockie, Newton, Ont., for review. There is an originality in the makeup, a method in the descriptions, that is praiseworthy. The subject of hardware is taken up in detail, and each page ornamented by a congruous headpiece which merits and retains your attention. The booklet in the main does the printers credit, but I see where it might have been arranged to a better advantage in one instance—I would not have placed my name on the front cover. A maxim, apt phrase, or some other catchy wording is much nicer. It carries the booklet up from mediocrity.

I would like to know if Mr. Lockie prepared this literature himself, or if he had it prepared and printed in one of the cities. I would like, also, to see any other literature issued by Mr. Lockie lately.

Article IX.

HINTS ON HOT-WATER HEATING.

We have dealt with the subject of the proper placing of radiators, and have shown why they will prove efficient or inefficient in accordance with the manner in which they are installed. We propose now to discuss a few of the important features of good hot water piping, and with that subject in hand will begin at the boiler.

Nearly every one knows that, unlike steam pipes, hot water pipes must rise continuously from the time they leave the boiler until the highest point is reached, this being necessary, first, so that all air may be removed from the whole system, and, secondly, so that the lighter column of warm water may easily be displaced by the heavier column of colder water coming down the return pipe.

Respecting this latter point, it may be explained that, unlike steam, where any reasonable pressure may be used to force the heat to distant points or through badly balanced portions of the system, hot water has for its motive power only the difference in weight between the warm expanded water in the flow pipe, and the slightly cooler, somewhat contracted water in the return pipe.

In order to make this perfectly plain, it may be said that water is composed of numberless small molocules, each perfect in itself, and each capable ol expanding and contracting when exposed to heat or cold in exactly the same manner as metals will, and this being the case it will be obvious that if a tube is filled with water at a low temperature, and heat is applied, the molocules individually will expand to greater size, but still having the same weight. As the temperature is raised higher and higher, however, the expansion of the molocules will have the effect of crowding those on the top over the edge, when they will roll down the outside of the tube, and this having happened, it will be quite apparent that while the tube is still full, and the "bulk" is still there, that the contained water cannot possibly weigh as much as that contained in the tube before the heat was applied, and a further proof of this is afforded by allowing the water to cool to its original temperature when, of course, it will not occupy the space it formerly did.

The point is this, that the water in the flow pipes, while the same in bulk, being composed of expanded molocules, is slightly lighter in weight than the water in the return, which is composed of contracted molocules and therefore having more of them in a given space than is possible with warmer water; is a trifle heavier than the latter, and, coming in at the bottom of the boiler, presses the warm water out at the top, when it will in turn contract by loosing its heat, and return in the same way.

The point sought to be made in the foregoing is very well shown in Fig 1, which is a glass tube, both legs of which were filled to the "water line." As soon as heat was applied to leg "A" the water, expanding, rose to the higher level, and though its level is higher its weight remains the same, therefore the level in "B" remains unchanged.

Supposing, however, that fresh water of the original temperature was poured into "B" in order that the level in both legs of the tube may be made the same, it will be clear that if the original ammount in "B" was sufficient to counter-

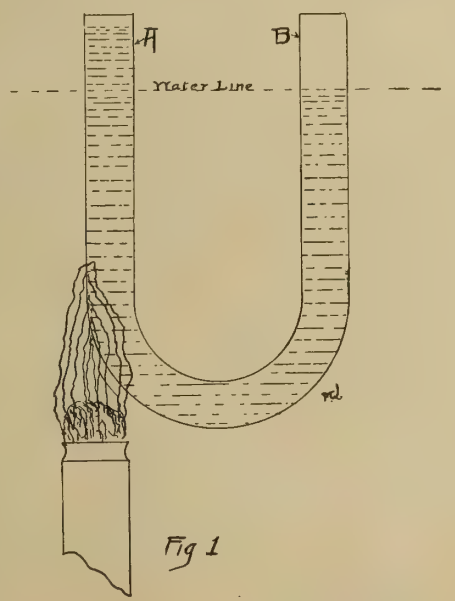

Fig 1

balance that in "A," even when expanded to the higher level, that, with the added weight to make the same "bulk" in both legs, the water in "A" will be compelled to move up, and as this is exactly the means of operation in a hot water system it will be seen at once that the motive power is at the best weak, and hence great care should be taken to properly grade all parts of the system, reduce friction by using large mains instead of more numerous smaller ones, and so distribute the water that the radiators on the upper floors where the difference in weight between the water in flow and return risers is greater than is the case with those on the ground floor, will not rob the latter.

Having discussed the motive power of a system let us now undertake to design one. The first thing for a fitter to do is to "size up" the character of building with which he is dealing, that is, to find out not only of what material it is built, but how it is put together, how the windows and doors are fitted, what sides of it are exposed, whether—if it be of brick, stone or cement—it is plastered on the walls, etc.

Having ascertained this he will—having read the previous article on the subject—be in a position to calculate the proper amount of radiating surface for each apartment, and if the building to be heated be a house, the temperatures required will be as follows: Dining room, sitting room, drawing room, halls and kitchen, 70 deg.; bed chambers 60 deg.; bath room, 75 deg. The radiators in each case to be located in the most exposed position, and to be provided with an air valve placed at highest point, and a quick opening valve which may be placed on either the floor or return pipe, but where twin connected radiators are used it is usual to place it on the outside pipe.

It is now necessary to lay out the piping system, and in doing so certain important points must be kept in mind, and among these is the size of connection which each size radiator requires, and the following will be found satisfactory for the ground floor, viz., a radiator containing fifty square feet and under, one inch pipe, over fifty and under one hundred square feet, one and one-quarter inch pipe; from one hundred to one hundred and fifty square feet 1½ inch pipe, and from the latter amount up to two hundred square feet, two inch pipe.

It will be found safe to allow 10 p.c. to 15 p.c. more heating surface to the various sizes of pipe on the upper floors.

Referring to Fig. 2, it will be observed that the plan of the basement, ground floor, and first floor of a house, are laid out side by side, and that the size of radiator necessary to fulfil its requirements having been determined in accordance with the instructions given in previous articles, is indicated in the position which it ought to occupy, viz., at the most exposed point, and it now becomes necessary to properly arrange the piping in the basement.

With this object in view the location of the chimney is ascertained, and the boiler placed as close to it as possible with the two-fold object of obtaining the best draft, and of having as short a run of smoke pipes to interfere with headroom as possible.

The next thing to do is to indicate by a dot or cross on the basement plan the places where the connections for the ground and first floor radiators respectively will come through the floor above. Having done this, draw your mains on the plan is such a manner as to give the most direct possible connection between the boiler and the various radiators, paying some attention, of course, to the appearance of the job when completed, and it may be mentioned here that it is customary to have one line only to indi-

cate both the main and return on a hot water job, because the piping for both must always be equal in size, and where two lines are shown in Fig. 2, one represents the main and return for the ground floor, and the other the main and return for the first floor.

It now becomes necessary to mark in the sizes of the mains, and the best place to start is at the ends farthest away from the boiler, and in this instance we will begin at the point where the main runs up to the bath room, which is marked one, because it supplies only eighteen feet of surface (as will be found by looking at the bath room) and ordinarily a one inch "riser" would supply fifty to sixty feet on that floor if the horizontal connection in the basement were a short one. The one running to the bath room is, however, of considerable length, as will be seen, and if there were fifty feet of radiation in the bath room it would have to be increased to one and one-quarter inches in diameter, and reduced to one inch just where it runs up through the floor.

Now, having arranged the size of main for bath room riser, mark down on a piece of paper the amount of radiation in the bath room, and being fed by the main, and pass along toward the boiler to the next connection, which is to chamber No. 1. Looking at the plan of the first floor we find that chamber No. 1 has twenty-eight square feet of radiation. Put this amount under the "18" on your paper and add the two amounts together, and the result, 46, is the number of square feet which the main has to supply at that point. This amount, if altogether, could be supplied by a one inch riser, but for horizontal mains must be one size larger, so that the main from that point back to the next connection must be one and one-quarter inches. At the next connection we have a riser supplying two radiators in chambers No. 2 and No. 3, which together total 46 square feet, and that amount added to the amounts on your paper already, viz., 46 square feet, would make a grand total of 92 square feet, which that particular main would have to supply, so that it would require to be 1½ inches in diameter from the last connection back to the boiler, and the other three mains are worked out in like manner.

Before work is begun on the plant it will be necessary to find out whether there is sufficient room between the floor and the ceiling of the basement for the height of the boiler and the necessary rise for the mains, which in no case should be less than one inch in every ten feet and, if possible, it should be a little more. In order to obtain the required information on this point it is only necessary to measure the distance from the boiler to the end of the longest run or main; allow one inch or more for every ten feet of that distance, and add the result to the total height of the boiler (which is given in all boiler catalogues) plus say one foot or more for pieces of the mains to rise vertically from the top of the boiler before they run horizontally. Having done this the fitter should, by looking at the pipe plan laid out on the basement plan, be able to take off a list of all the fittings required to put in the mains and connection in the basement, and he will not be far astray if he allows an additional five elbows for the connections for each radiator.

The method of making connections and "distributing" the water will be dealt with in a subsequent article.

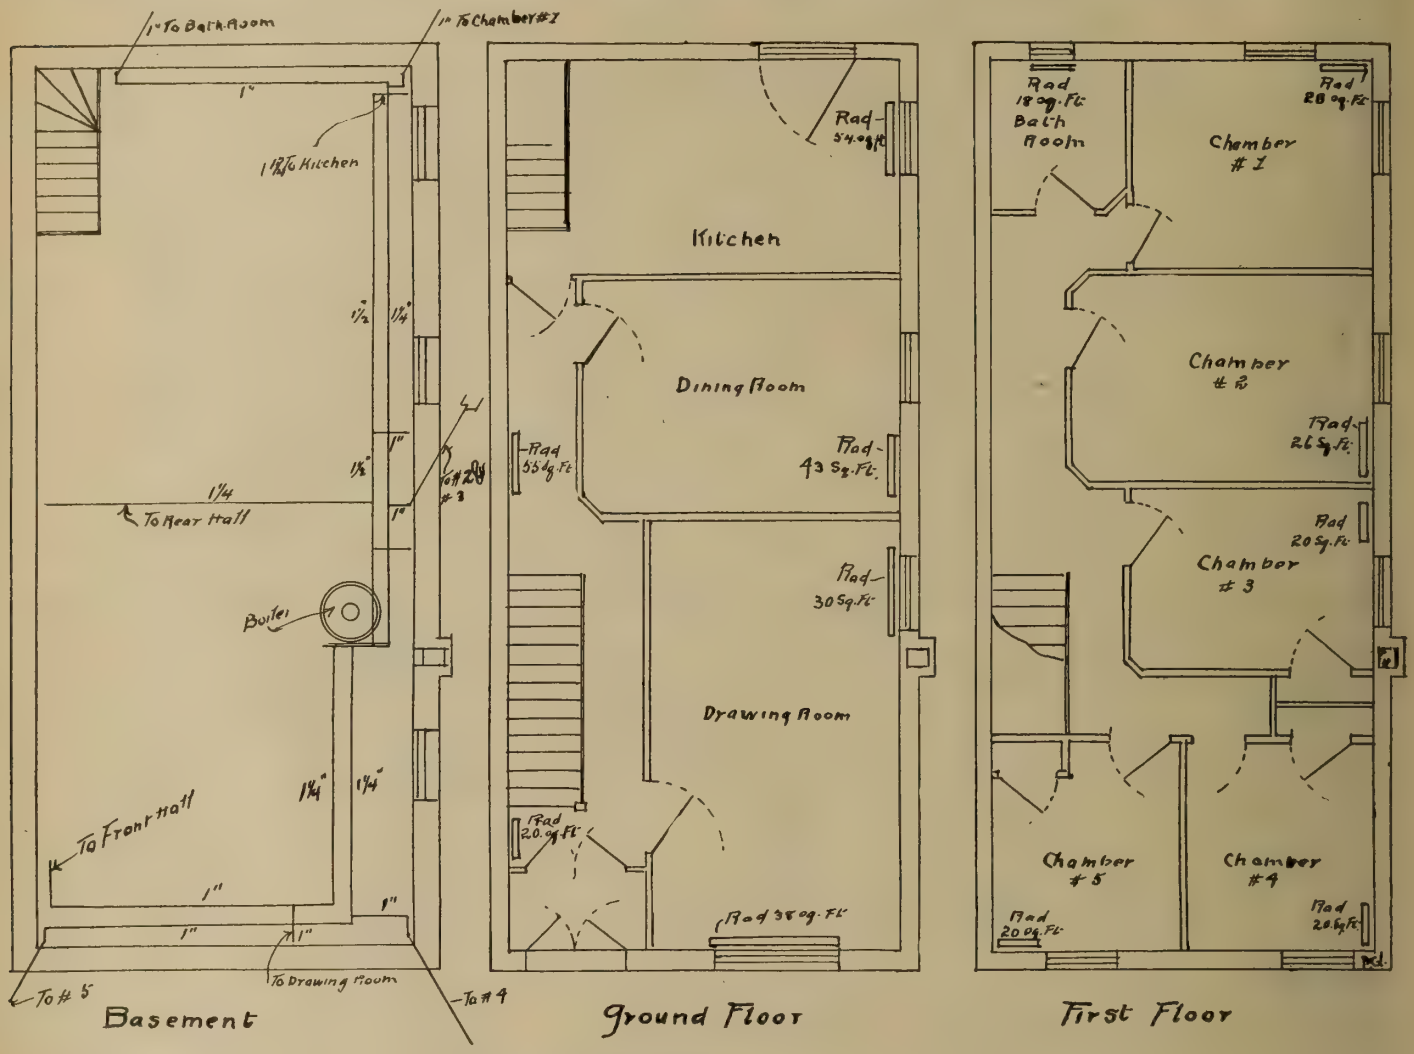

Fig 2.

A NEW WATER HEATER.

The Hoffman Heater Co., Lorain, Ohio, has recently put on the market a new water heater designed to furnish water for domestic supply. The heat is furnished by a powerful gas burner, having a valve which controls the supply automatically. The valve is so constructed that it cannot stick and the opening of any hot water faucet starts the heater. The supply of gas is automatically shut off when the water is raised to the desired temperature. Illustrated pamphlets showing the heater set in the basement and piping connections to several apartments in the building are issued by the company.

MUELLER PIPE REAMERS
RATCHET HANDLE PATTERN

c-035

When the wire edge left by a pipe cutter is spread or flattened by a poor reamer circulation is obstructed as much as if the pipe hadn't been reamed at all.

Mueller Pipe Reamers have the cutting edges well relieved so that the blades won't drag over the wire edge and flatten it. It cuts burrs off clean so that circulation is not interfered with.

Mueller Pipe Reamers will ream any size of pipe from ⅜ to 3 inch. They are made in plain and rachet handle patterns. The reamer illustrated is the ratchet handle pattern.

Each reamer bears the Mueller trade mark and is *unconditionally guaranteed.*

THE CANADA METAL COMPANY

WILLIAM STREET, - TORONTO

Plumbing Markets

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 14, 1905.

FROM all sections of the country come reports that business is of such a volume that it has never been equalled. Small jobs are very rare, and even when they are brought to the notice of the master plumber he does not like to undertake them, so numerous are the larger and more costly contracts. The best reason for this condition is the extensive operations going on throughout the smaller towns and villages in the eastern provinces of the Dominion. A large number of the towns and villages in these provinces are also installing new water works systems, and this alone demands a large output of iron pipe. People in general are beginning to realize the advisability of installing high-priced articles, so that the master plumber is receiving much better prices for his work.

The carpenters' strike still continues. Other men in a great many cases have been obtained to fill their places, and as the plumbers' union has not supported the strike in any way the building trade in this city is progressing very favorably.

The lull in business which was so natural at this time in previous years has not yet put in an appearance, and local wholesale supply dealers believe that the present heavy demand will continue until the end of the present season.

Range Boilers—Demand remains unchanged. Prices are firm, but no advance is anticipated. We quote: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Beyond a slightly heavier demand, general conditions on this market remain the same. We quote the following: Discount 30 and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—All prices are firm, and as the market has assumed a steady appearance more confidence is being displayed by the purchasers. Our quotations are as follows: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—Some retail merchants are reporting that it is very difficult to secure iron pipe within a short time after the date of bnoking order. No doubt this is the case, and possibly some wholesale supply houses who have not much space for storage purposes must find it difficult to obtain pipe on short notice to fill their orders. The output of the mills must be inadequate under the present strain. Prices are firm, and there is some talk of an advance. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 1-2 per cent.; 3-8 inch, 62 1-2 per cent.; 1-2 inch, 72 1-2 per cent.; 3-4 inch, and upwards, 74 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—The market has become steady once more, and the probability of an advance in price has become very vague. We quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
Front street east,
Toronto, July 14, 1905.

FLUCTUATIONS in the prices of iron pipe and fittings have been the feature of the past week; the granting of larger discounts having been followed a couple of days later by an advance of 1c. on listed prices on most lines. The new prices are none too strong as yet, but are expected to stiffen. The new list on brass goods, etc., is not yet available for publication.

Activity continues in all lines, the large shipments of goods indicating that the volume of building being done in all sections of the country is enormous. This is practically so regarding the west, large orders being placed not only for general construction work, but also for waterworks requirements. The general outlook is very bright.

Lead Pipe—Sales are reported large, the demand being excellent. We quote as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—The heavy demand indicates general activity and accounts for the firmness in prices. Prices are unchanged. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Prices are strong after the fluctuations of the past week. Demand is active. We quote: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—No change is noted, demand continuing active. The discount of 15 per cent. continues.

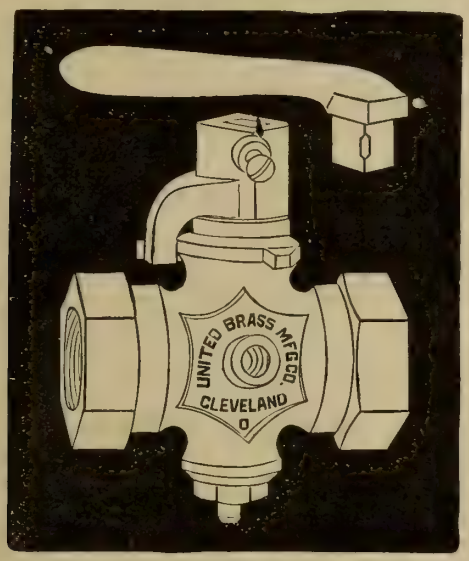
Galvanized Iron Range Boilers—Volume of business being done is reported to be large, with prices the same. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—An advance of one cent is reported. Sales are fairly large. We quote: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Buying is active at the same quotations. We quote: Bar solder, half and half, guaranteed, 18c.; wiping solder at 16 1-2 to 17c., and refined 17c.

Enameled Ware—A large business is being done, the construction of dwelling and apartment houses calling for large quantities of material. Our quotations are: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50, special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

TENDERS WANTED.



Tenders will be received until August 1 for the heating by steam of St. Carthagh's R.C. Church, Tweed. Tenders to be sent Rev. J. S. Quinn, Tweed, Ont.

Tenders for the steam heating of the Court House and Registry Office at Whitby will be received up to the 24th July instant. Plans and specifications can be seen at the County Clerk's office on and after July 13. The County Clerk is J. E. Farwell, Whitby.

England & Co., Winnipeg, have secured the contract for the plumbing and steamfitting for the Geo. Black Lumber Co.'s new building in that city.

S

OTTAWA PLUMBERS' STRIKE.

IT is a well-known saying that there are two sides to every question, and according to word received from Ottawa this week only one side has yet been given regarding the trouble between the master plumbers and the journeymen of that city.

The master plumbers state that on a month's notice the journeymen demanded 32 cents per hour after an unsolicited increase in wages had been granted this Spring by the majority of the master plumbers. The second increase meant that in some of the shops the masters stood to lose hundreds of dollars on the contracts they had booked, the journeymen's demand meaning an extra outlay in wages of from $2,000 to $3,000 per year. The Master Plumbers' Association decided that the demand for the 32 cents could not be entertained, after carefully reviewing the situation.

Of the two shops that have compromised, one is said to have only one journeyman, while the other employs a journeyman only at intervals. It is understood that the proprietors of these shops are not now members of the association.

It is altogether likely that the trouble will come to a speedy termination, the course of the master plumbers being such as to commend itself, not only to the public and trade generally, but also to many of the men, the employes of one shop having returned to work irrespective of the union and there being a strong probability of the remainder taking up their tools again within a week.

PLUMBING NEWS AND GOSSIP.

Plumbing and heating is very brisk at Amherst, N.S. The Amherst Foundry Co. are manufacturing some popular lines of baths, sinks and lavatories.

Dickenson & Allen have opened a new plumbing shop on Victoria avenue, Hamilton.

Toronto journeymen defeated the master plumbers at baseball last Saturday—nine to six.

Nines representing the Ontario Lead & Wire Co. and the Toronto Master Plumbers' Association, play baseball at the Woodbine next Saturday.

Toronto Master Plumbers' Association elected Messrs. W. Mansell, R. W. Harrison and K. J. Allison, as delegates to represent Toronto at the convention in Winnipeg next month.

The executive committee of the Ontario M.P.A. meets in Toronto this month, probably on Friday, the 28th.

No Toronto plumber should forget the good time billed for Friday, July 21, at Lorne Park. And if he forgets his wife should remind him, as it is ladies' day.

W. J. Wall, dealer in plumbers' supplies, floor tiles, and other lines of goods of a similar nature, has opened a new showroom on Bleury street, near Craig street, Montreal.

NEW RADIATOR COMPANY.

It is understood that a new radiator company is in process of formation in Toronto, and the charter is expected to be issued this or next week. A satisfactory manufacturing site in the west end has been chosen and construction work will probably be rushed forward at once.

IDEAL
Woven Wire Fencing

MAKES MONEY FOR YOU

Your customer, the farmer, wants a fence that can be put up quickly and easily just when he wants it. Hand made fences cost too much when you figure the time it takes to build them, to say nothing of the hard work.

Why not sell "The Ideal," the best woven wire fence made? You can build up a permanent trade that will pay you as much as any line you are handling. Other hardware merchants are doing it. Why not you? The Ideal will give satisfaction to your customer and make him your friend.

Have you seen the Ideal? Let us send you a sample and catalogue showing why Ideal fence made from No. 9 hard steel wire throughout is the strongest and the best value.

Ask us about the Ideal all metal farm gate.

VALUE OF CONVENTIONS.

AT the recent gathering of the National Association of Master Plumbers, at Atlanta, Ga., Mr. J. H. White, of Paterson, N.J., gave an interesting address from which we make the following extracts :

"Past experience tells us that these gatherings of ours have been channels through which we gathered valuable education. We have rubbed up against each other, exchanged thoughts, laid out plans and devised ways and means to carry out the said plans for the best interest of all those who need our services, as well as ourselves. We come together, not to praise ourselves (though it is not a bad thing to give a pat on the back when it is needed), but rather to point out our faults. As a consequence we learn something of the failures as well as the many good things which have been accomplished in our profession.

"We gather together to try to find out how much better our work can be done, not to see how cheaply it can be done. We gather together not with a purely philanthropic idea of helping some one out of a pit which he dug himself, but for the purpose of exchanging ideas. We find the men we meet are not only willing but anxious to impart their knowledge to their fellow craftsmen and get something in return along the same lines; and therefore these conventions are doing a whole lot of good not only to us but to the public at large.

"Some think the only protection we need is from the journeymen. Some think we need it from the supply houses; some one thing and some another; but all agree it is the other or outside party who makes all the trouble. Now let me say right here that the protection we need most is from ourselves. It will be a strange think if we go out of this convention without hearing of some one who has kicked over the traces. He saw or thought he saw a dollar on the other side, and to get that dollar he endangered the whole superstructure, reaching over dollars to pick up pennies. And, let me whisper, it is the large shops who are the worst.

"Man is prone to selfishness and to live for himself. He figures out, 'I am only one and one can't help many.' That man needs protection from himself. So we agree with him and say, 'Come to our conventions, for many can help one.' So we meet in our locals at home to help each other there; then we meet altogether once a year to compare notes and lay out plans for our locals to work from, so that we can be helped more. In other words, to till that soil in which the seed of protection was planted.

"Every year has seen the number of master plumbers increased in our conventions. Let us resolve not to give up the fight until all are enrolled under our banner living up to the standard of loyalty until the public not only sees but is willing to acknowledge that the plumber is its protector against the greatest of all foes—sickness and death. In the cities where the plumbers are best organized and are loyal to their organization is found the lowest death rate.

"Another point I want to bring out for our local meetings is the social end of it. Remember that 'all work and no play makes Jack a dull boy.' Have a good time as often as you can. For the most successful local I have met in

my travels the president gave this as his reason: 'We have an 'annual' banquet four times a year and a lunch in between.' Remember there is no nearer way to a man's heart than through his stomach. And don't neglect to make a place in your festivities for your wives and daughters or sweethearts. If you can get them interested the success of your institution is assured."

PROFITS ON FURNACE CONTRACTS

By F. G. Schafer, Youngstown, Ohio.

NOW that the stringency is past, and everything points to at least three or four years of normal business conditions, is it not well for furnace dealers generally to consider the question at the head of this article? There are certain lines of trade in which this question is never seriously considered, as there seems to be an "unwritten law," or tradition, or custom, regarding a minimum of profit beneath which no self respecting, and certainly no successful, dealer will figure an estimate. For instance, in the shoe and clothing trades a profit of from 25 to 33 1-3 per cent. is considered not only proper, but entirely reasonable, while $100 net still remains the standard or average profit on the sale of a really good piano. While human nature is such that each tradesman considers his own particular business as entitled to a profit slightly better than the average, yet a furnace dealer would be entirely justified, and still remain consistent, by applying this rule to his own estimates. When a piano dealer sells an instrument, even of an average quality, there is scarcely one chance in 100 that he will ever have any ill will or complaints or a lawsuit on his hands because of it, and even when it requires tuning the purchaser does not look to the dealer to do it free.

This same rule applies to almost any other mechanic except a furnace dealer, who, unlike the mason, painter, roofer or carpenter, cannot be sure that he is through with his job when he packs his kit and turns his back upon it. Unlike almost any other article in the building trades, a furnace dealer's product is subjected to the greatest destroying element in nature, fire; besides which fully nine-tenths of the success of his job depend upon conditions outside of the furnace itself. The writer is fully aware that the strong claims made by the manufacturers for the better grades of furnaces are quite true, provided the owner allows, or cellar partitions permit, its proper location and the attendant gives it proper attention. But how often is this the case? Is it not true in thousands of cases—yes, in the great majority of sales—that the purchaser retains a string around the dealer's neck for years after his job has been installed? Another element to be taken into consideration is that a furnace dealer, more perhaps than any other tradesman, takes his reputation in his hands the moment he enters this business. Indeed, it has been said that even if a dealer in furnaces were as honest as Job he could not sell 100 furnaces to 100 different persons and retain a reputation for common honesty in the minds of all of them.

Unfair Risk Compelled.

No matter how good a cast iron fire pot may be constructed it is a well-known fact that its life, especially with soft coal, is as problematical as that of a lamp chimney, which may crack the day it is bought, or last for years. I have in mind an unusually thick and apparently durable fire pot (20 inch, weight nearly 400 pounds) which cracked and sent volumes of smoke into the rooms during February of the second Winter. Hundreds of dollars' worth of these furnaces had been sold by this dealer previously, some to intimate friends, a number of whom had similar trouble. And they speak of this dealer in the same vein as one would of a thief or confidence man. Yet the dealer was just as honest in his intentions as the man who placed the slate roof on his customer's residence and who retained the owner's good will, simply because slate is not subject to wear, while a furnace is.

Is it any wonder, in view of these things, that many hardware dealers positively refuse to handle furnaces for fear that this addition to their business will "queer" their other lines? How often are furnace dealers called out in zero weather to pacify furious customers, only to find that clinkers have not been removed or the cold air slide is not properly adjusted. Or probably the customer himself insisted upon a poor location for the furnace or registers, for which error the customer rarely blames himself when Jack Frost compels him to be up against the fruits of his own folly.

Unreasonable and Unprofitable.

Some time ago the writer was berated for refusing to send a man, free of charge, at a cost of street car fare and nearly a half day's time, to instruct a user of his furnace, this man having bought the house five years after the furnace was installed. Some time later a housekeeper threatened by telephone to "tell her neighbors what kind of a man you are" unless the dealer would clean out her furnace of soot free of charge. On another occasion a customer asked for a man to fix his chain which the children had disarranged or broken, and to do this free of charge, although it meant 20c. street car fare, a trip of 5 miles, and one-half day's time of a workman.

Recently a notorious "Cheap John" furnace dealer was considerably puffed up by the fact that he had sold 112 furnaces in 1903 and about 100 in 1404, and did not seem to realize that the number of dollars he had earned was of more importance to him than the number of sales he had made. This man has no financial standing, drives a horse and wagon that would do credit to the average rag peddler, and gets as little as $27 worth of pipe by freight c.o.d. Last Summer even this small lot of pipe was allowed to lay in the freight house for nearly three months until 75c. storage had accumulated. Finally the manufacturers arranged with another dealer who did not sell one-third as many furnaces, but who had a gilt edge credit, to take the goods at three-fourths of their value rather than be forced to pay the freight both ways.

Price and Profit Too Low.

Fellow furnace dealers, is it not time to call a halt on "Cheap John" profits in this business, in which more than in any other, it is impossible to please all, and in connection with which are so many unpleasant and worrying features, due largely to the purchasers themselves? One of the most successful dealers the writer is acquainted with says: "Irrespective of the grade or price of a furnace contract I look upon every sale as a proposition in which I many look for some annoyance or loss of time, due to the carelessness or laziness of the users themselves, and that each contract should net an average of $66.67. I set this odd figure, which is two-thirds of $100, so that it is an easy matter to get a rough estimate of my profits, as every third sale means a profit of $200." Inquiries among other dealers of the better sort shows that, with the exception of sales to real estate firm, the minimum of profit on any contract direct with the user should never be less than $50.

Furnace dealers should realize that an unreasonably low estimate is an injustice to their fellow competitors and that a contractor as well as a laborer can be a "scab" in the trade. To bring about better prices, however, every dealer should use his influence to educate the buying public in the fact that it does not pay to give up less than three figures for a furnace job, or as the couplet puts it:

To make it pay you in the end,
Over one hundred you must spend.

The writer trusts that this article will call forth others on this vital question to the trade. At all events, if it will cause a certain class of dealers to stop for a moment and do a little thinking it has not been written in vain.

No Sentiment in Business

There can be Trade without much BUSINESS about it.

Our classified article list of Industrial Products is a book of information. It tells you where articles are manufactured, what the articles are made of, and the uses they are put to. THE CITY MAN KNOWS all about it, DO YOU? Cloth bound, 400 pages, price $2.00. Ask us the price of our Canadian Industrial Blue Book for the next 30 days.

QUALITY and FAIR PRICES
ARE OUR STANDARDS

ALEX. McARTHUR & CO., Limited, MONTREAL

CURRENT MARKET QUOTATIONS.

July 14, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

LOST

A good order through not carrying a stock of **Paterson's Wire Edged Ready Roofing** and **Building Papers.**

Such has been the experience of many Hardware Merchants before they commenced handling goods of our manufacture.

We make the material your customers want, and it won't pay you to handle any other kind.

— ALUMINUM —
THREE-GALLON TEA POT

YOU WANT THE BEST

ALSO MADE IN
6, 9 AND 12 CUP SIZES

WE MAKE THE BEST

Aluminum utensils take and retain the heat better than any other kind.

Aluminum does not rust, no danger of poison, does not taste the coffee, and can be set on the stove without any detrimental effects to either the coffee or the pot.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

The Fisk
Detachable Motor Tire

A tire that's firmly fastened to the rim in a simple and sensible way, so that you can attach it or remove it with an ordinary wrench, quickly and easily.

Even with the tire flat, you can travel on it safely—and not only that, but because of its peculiar construction you can do it with the least possible risk of injury to the tire.

There's more wear and less trouble with this tire than with any other on the market—and it's safe.

LEATHER BELTING

"Crown Brand" Lace Leather

As manufacturers of **Leather Belting,** it is our wish to supply customers with a **Lace Leather** that will be found satisfactory in every particular. To all users of **Belting,** therefore, we offer our **"Crown Brand" Lace Leather,** a strong, smooth, beautifully finished article at a moderate price.

Montreal, Toronto.

If You Don't Handle the Pease Economy Heaters

Why Not ?

HAS it occurred to you that it would be easiest to sell a Heater that the great mass of our people believe to be the Best ?

Has it occurred to you that such a Heater will afford you a larger margin of profit on your contracts than the cheap kind ?

Is it not a fact that if you sell your customer a second grade Heater you cannot reasonably expect that such a sale will do much in the way of increasing your business in the case of the other goods that customer may need ?

There is no need in the line of Heating apparatus that the Pease Company cannot fill. Your customer may prefer Steam, Hot Water, Combination or Warm Air, and you can in each case fill his requirements with a first-class Heater from the splendid **Pease Line.**

For twenty years the Pease Company have been constantly in the front in the best interests of the Heating Trade —First Class Goods Only—Good Work Only—a Fair Profit for the dealers. Is this not the only policy that is likely to increase your business, and incidentally, your profits ?

Let us hear from you—a Post Card will answer—send it to-day.

Hardwaremen!

This is the season for

APPLE PARERS

The Hudson Pattern is the one for you to handle. Why? Because, first, we are the only manufacturers of **Apple Parers** in Canada, and, second, it is the best model in the world. Easy to say. Just as easy to prove. Compare the material in **The Hudson Pattern** with the material in any other pattern that you know of—compare the "Hudson" with any other for simplicity, durability, ease of operation—compare it for price. Every machine made with scrupulous care; hence, the guarantee. See your jobber at once, or write direct to us for quotations. We can ship any quantity on short notice.

Look Out for Imitations

OF

"P & C" ASBESTOS PACKED COCKS

Imitation is the sincerest form of flattery.

There are several imitations of the Pratt & Cady Asbestos Packed Cock now being offered. They are called Asbestos Packed Cocks, but they are the same as all other imitations, i.e., NO GOOD.

Anybody can make an iron or brass Cock and pack it with asbestos and call it an Asbestos Packed Cock. But they can't make one that will last as long as the original Pratt & Cady, or one that will give the same amount of satisfaction. Our P & C Asbestos Packed Cocks are packed with a special preparation of asbestos, and a vulcabeston ring is used on the shoulder of the plug for top packing. These special formulas are known to us alone. When you put in a P & C Asbestos Packed Cock it lasts. When you put in an imitation it wire-draws and blows out. That's the difference. Look out for the P & C trade mark on every Cock you buy.

If your dealer can't supply you write us direct.

MARITIME WHOLESALE HARDWARE ASSOCIATION CONVENTION

SEVENTH annual convention of the above association was held in Digby, N.S., on July 12 and 13, and it proved to be one of the most successful meetings of the association.

The convention was held at The Pines,

John A. McAvity, St. John, N.B.

one of Digby's most modern hotels. A better place could not have been chosen. This fine hotel with its large verandahs and spacious rooms stands on a high hill overlooking the Bay of Fundy and giving a splendid view of the beautiful town of Digby.

Those present at the meeting were as follows:

Jas. Pender, of Jas. Pender & Co., St. John.

T. C. Lee, of W. H. Thorn & Co., St. John.

W. S. Fisher, of Emerson & Fisher, St. John.

John A. McAvity, of T. McAvity & Sons, St. John.

John Keeffe, of Jas. Robertson & Co., St. John.

John J. Foote, of the McClary Mfg. Co., St. John.

H. N. Coates, of the S. Hayward & Co., St. John.

E. K. Spinney, of E. K. Spinney & Co., Yarmouth.

A. W. Smith, of Geo. E. Smith & Co., Halifax.

W. S. Robertson, of Wm. Robertson & Son, Halifax.

J. L. Crowell of Wm. Robertson & Son, Halifax.

A. B. Wiswell, of A. M. Bell & Co., Halifax.

W. J. Stairs, jr., of Wm. Stairs, Son & Morrow, Halifax.

C. A. Sterns, of H. H. Fuller & Co., Halifax.

M. O. Crowell, of Crowell Bros. & Co., Halifax.

W. H. Sterns, of H. H. Fuller & Co., Halifax.

G. H. Conley, of Jenkins & Hardy, Toronto.

F. M. Alexander, of Hardware and Metal, Toronto.

The business meeting proved very interesting, and many lively discussions took place. The principal business which was the election of officers resulted as follows: President, Mr. John A. McAvity; vice-president, W. G. Robertson; Executive Committee—T. C. Lee, H. N. Coates, John J. Keeffe, M. O. Crowell, E. K. Spinney, W. H. Sterns. The secretary will be appointed by the Executive Committee in St. John, N.B.

It was much regretted that Mr. Weldon was unable to accept the nomination for office of president, but he has a worthy substitute in Mr. McAvity, who was the unanimous choice of the meeting. All reports were read and adopted, and the place of the next annual meeting was left to the executive to decide.

The retiring president, Mr. W. H. Sterns, made a brief speech, thanking the members for their loyal support in the past year. He said he had made his remarks at the executive meetings and would give the others a chance now and cut his speech very short.

The amusements of this convention were many, and a pleasant time was spent in the two days. The principal pleasures were bowling, billiards, tennis, buckboard drives, swimming, and in fact every form of amusement was indulged

---

John F. Foote, of the McClary Mfg. Co., acted as official photographer of the party.

Convention Notes.

One word describes the place of meeting—delightful!

Eighty-two in the shade, but nothing was drank but pink lemonade.

Mr. Weldon, the past vice-president, who could not be present owing to the press of business, was very much missed.

Some of the members took their annual Bay of Fundy bath to fortify themselves for the evening session.

Owing to Mr. Jas. Pender's modesty, he does not appear in the picture, but was much in evidence all the same.

Mr. W. S. Fisher was, as usual, one of the shining lights of the convention and had a smile for everybody.

The cheers were loud and long when Mr. McAvity was announced president for the coming year.

The McClary Mfg. Co., through their St. John representative, Mr. Foote, presented each member with a very handsome leather card case, which was very much appreciated.

When the band struck up on the boat, which brought the St. John contingent to Digby, some of the members imagined they were crossing the Boyne, but soon awoke to the fact that it was the Bay of Fundy, although it was the morning of July 12th.

A feature of the convention was that every merchant present was found to be not only a subscriber, but an interested reader of Hardware and Metal, some of the delegates subscribing for a number of copies for the use of the members of their staffs. F.M.A.

Maritime Wholesale Hardware Merchants at Digby, N.S.

CANADIAN MANUFACTURERS IN ENGLAND

By W. L. E.

No. 1—British Hospitality.

Birmingham, June 26.

BRITISH hospitality is proverbial for its magnificence. We have been in England a week and have learned to appreciate this from experience. Our voyage across the Atlantic was longer than we expected; but it was, perhaps, not an unfortunate thing. It fortified us for the round of pleasure which mine host, the London Chamber of Commerce, had provided for us. And we needed to be fortified. From Monday morning to Sunday night we were kept on the go.

* * *

The initial function was the presentation of our party of nearly three hundred to the King and Queen. This was really not a part of the original programme. It was not until our steamer was docked at Liverpool that this agreeable intelligence was announced to us. It was suggested by His Majesty and arranged for by Lord Strathcona, who appears to have the ear of King Edward, as well as that of a great many of the leading men of London, and especially of those engaged in trade and commerce. Lord Strathcona is doing a great work for Canada in Great Britain; and one does not discover this to the full until one comes into close contact with the merchant princes of London, as we have been during the past week.

* * *

But this is digressing from the main object of this letter, which is to speak of the hospitality of the business men of London, as exhibited in their treatment of the members of the Canadian Manufacturers' Association now touring Great Britain. The most optimistic of us had never dreamed of such entertainment. And had we dreamed it would probably have been accompanied by nightmare. But I do not know of anyone who experienced nightmare, for, to say nothing about the antidote of mal de mer that nearly every one but ourselves, of course, suffered, the London Chamber of Commerce, through Secretary Murray, were careful to see that with every feasting function there was an alternative function in the open air on land or river, with the result that all returned to their hotel each night tired, to fall so fast asleep that no nightmare on earth could trot fast enough to overtake them.

* * *

The graciousness and tact of the King were shown in an eminent degree at the Windsor function. Before proceeding to the castle we were driven to the Frogmore Mausoleum, where lie the remains of Albert and Victoria. Since the death of Victoria the mausoleum is only opened once a year, and that only for two hours, but at the King's command it was specially opened for the inspection of his Canadian subjects, as were also the magnificent royal gardens. The King and Queen received us at the foot of the main terrace at Windsor, and after each of us had made our best bow before them, His Majesty, who was dressed in grey frock suit and white tall hat, slowly approached our group, raised his hat and remarked: "I thank you very much. I welcome you to England. I welcome you especially to Windsor. I hope you will spend a happy day and return to your homes not too much fatigued after your long journey."

"God Save the King" and "three cheers for His Majesty" followed. Then refreshments were served in the orangery. And all returned to London delighted with our first function on British soil.

* * *

The British people in general, and the members of the London Chamber of Commerce in particular, possess the art of entertaining to a degree altogether unknown to us on the western hemisphere. When complimented they merely remark: "Oh, we're used to it. We've been entertaining for hundreds of years. But then we're only trying to repay the kindness you Canadians showed towards our delegates to the convention of the chambers of commerce of the empire two years ago."

* * *

But it was not only the entertainment that impressed us. There was the prearrangement. It was simply perfect. Secretary Murray and his staff labored unceasingly, and every function came off without a hitch. Mr. Thomas F. Blackwell, the president of the London Chamber of Commerce, was equally solicitous. The delegates are no more likely to forget the indefatigable labors of these gentlemen than they are the sights and experiences of their British tour. And the pre-arrangement of our tour in Great Britain is not confined to the visit to London. Secretary Murray also arranged the provincial tour of two weeks, upon which we are starting to-morrow (Monday).

No. 2—Provincial Tour.

London, July 8, 1905.

We have just ended the first week of our provincial tour. We have visited in turn Walsall, Birmingham, Sheffield, Leeds and Bradford, and in each place we were accorded the heartiest kind of receptions. Nothing was too good for the Canadians. And it was significant that while the masses cheered, it was the business men who made the pre-arrangements for our entertainment. They were interested in Canada and its trade, and eager for information in regard thereto.

* * *

The manufacturers and merchants of Great Britain are not unconcerned about Canadian trade. On the contrary, they are most solicitous. The question with them is how to get it. Business is business with them; but they are by no means devoid of sentiment. They want to be on closer terms with us politically and commercially, because the people of Great Britain and of Canada are brothers. There is the utmost friendliness towards the United States, and it is evident that any little remark of unfriendly criticism of that country displeases them, but the people of Great Britain consider the relationship with Canada as much closer. "The people of the United States," said a prominent speaker at one of our functions, "are our cousins, but Canadians are our own kith and kin. They are our brothers." And the remark was applauded to the echo.

* * *

The reception we secured at Walsall was unique. The town has a population of about 90,000, and every soul seemed to have turned out to see us. When we arrived at the station the streets from there to the Town Hall were literally packed with men and women and children, and the police had some difficulty in getting us elbow room. The business men, as represented by the Chamber of Commerce, were not so demonstrative, but they exhibited their cordiality, first by a reception, secondly by a substantial luncheon, and thirdly by throwing open their factories and workshops to our inspection.

* * *

Walsall is famous for its manufactures of leather goods, souvenirs of which many of our party brought away with them; but it has iron and steel and clothing industries of no mean order. Walsall is an old town. Indeed, its citizens boast that it was born before Birmingham; and as proof of this relate how letters were once addressed "Birmingham, near Walsall." But it appears that when the railway age dawned, the men of power in Walsall would not allow the iron horse to enter their gates. The beauty of the town would be marred, and the lives of its citizens endangered. It took a later generation to correct this; but in the meantime Birmingham had got the start—and kept it.

* * *

From Walsall to Birmingham is only a step, and before we had forgotten the warm good-bye hand shake of the business men of the one city we were in the warm embrace of the business men of the other. The function at which we were guests was, of course, the luncheon

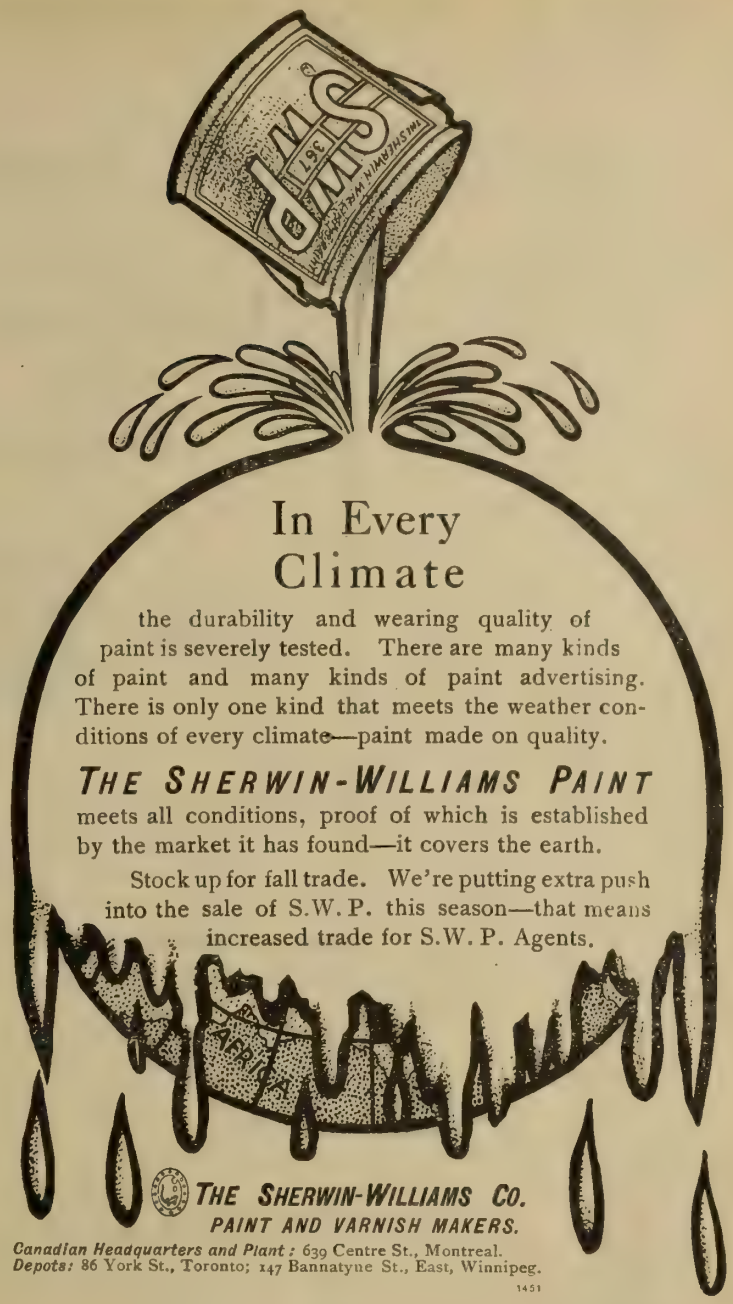
tendered by the Chamber of Commerce, the centre of attraction being, of course, the speech of the Right Hon. Joseph Chamberlain, whom President George so aptly described as the best Colonial Secretary Great Britain has ever had. A great deal has recently been heard about Mr. Chamberlain's health, but in neither manner nor matter did he exhibit any loss of vital force. The speech was tactful and masterly, and in the Canadians present Mr. Chamberlain found a sympathetic audience. As a speech, it was the best we have heard since we landed in Great Britain.

* * *

After listening to Mr. Chamberlain's address we entrained for Bournville, the famous model village in connection with the cocoa and chocolate works of Cadbury Brothers. And it is a model village. Each workman's home is a delightful little villa, ivy and rose covered, and surrounded by pretty and well-kept gardens, all of which are rented at a low rate. At one time the workmen were allowed to purchase their homes, but speculators took advantage of this to the detriment of all concerned—except the speculators, of course. This put an end to the home-purchasing scheme. The village is now managed by a trust board.

* * *



A great many of the employes at Cadbury's are girls and young women, and the regulations of the firm demand that each girl must take two hours' exercise per day either in the open air or in the gymnasium. Each girl has a proper costume for the occasion, and while we were there we saw them nimbly leaping over bars and playing basket ball on the lawn. Not the least of the attractions at Bournville is a magnificent clubhouse and athletic grounds. There are also two beautiful parks within the village enclosure for the benefit of the employes. Mr. and Mrs. George Cadbury entertained us. Both made speeches, Mrs. Cadbury being particularly gracious in her remarks.

* * *

Smoky and grimy as Sheffield is, our visit to that city will be long and favorably remembered. The business men of that city could not do enough for us. They threw open their interesting factories as well as their hearts to us. We visited factories in the morning and factories in the afternoon, and between the two was sandwiched a magnificent luncheon in Cutlers' Hall.

* * *

Among the factories visited in Sheffield none gave greater pleasure than that of Thomas Turner & Co., cutlery and file manufacturers. Refreshments were pressed upon us as we entered. Every part of the works were thrown open for our inspection and the process of manufacture explained by guides, and as we left the works each visitor was presented with a handsome souvenir knife. At the steel works of Thomas Forth & Sons, Limited, attention none the less merited was shown. Two of the chief members of the firm piloted us for two or three hours about their works.

We saw enormous cannon being forged by enormous hydraulic hammers of 3,000-ton pressure, shells being cast, and merchantable steel being prepared for the market. Then tired and grimy we were led to a cool and spacious dining-room on the premises, where refreshing tea and other kinds of refreshments were served us. And then, as if they had not done enough for us, we were presented with handsome pocket knives as we departed. "We go forth laden with hospitality," remarked a witty lady in the party.

* * *

In Leeds the centre of attraction to most of the visitors was the ruins of the famous Kirkstall Abbey; but just beyond the abbey are the works of the Kirkstall Forge Co. It was to these that Mr. W. S. Leslie, of Montreal, led a party of the excursionists. To us the steel works of this company were as interesting as the abbey, for the monks who built the abbey started the former. What is known as the new part of the steel works was built in 1740. But without an explanation this is not true, for on the sale of the works of 1740 is erected one of the most modern rolling mills in England. Mr. Butler, the chief member of the firm, took charge of us and during our trip through the works we saw much that was old blending into the new. In other words, the old methods are gradually but surely being swallowed up by the new. And some day even the interesting old forging hammer, driven by a waterwheel, will have to depart. It is the last of its kind left at the works, and even the modern hammers which surround it appear to have compassion upon it.

* * *

Bradford received us most cordially. From the station to the grim and gothic

Town Hall the streets were lined with people, who cheered us as we marched by. After a drive about the city and a brief visit to some of the factories, we were entertained at luncheon at the Cartwright Memorial Hall—one of the most beautiful places we had visited,—and shortly after 3 p.m. we were on our way back to London.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Stoves, Ranges and Radiators.

THE GURNEY FOUNDRY CO., LIMITED, have issued their stove catalogue, No. 61, and its artistic appearance commands instant attention. It is a book of 152 pages and cover, 8" x 11" in dimensions, and is illustrated throughout with half-tone engravings of the well-known "Oxford" lines. The cover is elaborately colored and embossed, the distinguishing feature of both front and back being an embossed engraving of an Imperial Oxford Range. A cord hanger through the upper left-hand corner of the book adds to its convenience. Complete information is given concerning the many lines manufactured by this firm, including stoves and ranges, hotel ranges, warm air furnaces, steam boilers, radiators, hot water heaters, general castings, etc. The Gurney Foundry Co. has two plants, at Toronto and Toronto Junction, the latter of which is given over to the manufacture of boilers and radiators. All dealers interested in the goods manufactured by this firm will do well to send for a copy of the new catalogue, mentioning Hardware and Metal in writing.

Rubber Roofing.

The Pedlar People, Oshawa, Ont., have sent Hardware and Metal samples of their flexible rubber roofing. The three grades—one, two and three-ply—are shown, neatly bound in booklet form. This roofing is said to be much more durable than wood or tin, and prices will be quoted to any dealer applying and mentioning Hardware and Metal. The goods are sold f.o.b. Oshawa, Montreal, Ottawa and Toronto.

The Columbian Hardware Co.

This firm sends us three new catalogues averaging about thirty pages, all of which are gotten up in first-class typographical style, with embossed covers. Two of the booklets are illustrated by frequent half-tone engravings, and contain prices of spring hinges, door springs, sash lifts, door pulls, vises and anvils. The third is devoted to joist hangers and includes carefully prepared tables which will be very useful to architects. The Columbian Hardware Co., Cleveland, Ohio, will send these booklets to any dealer on mentioning Hardware and Metal.

Scully's List.

Hardware and Metal has received the July and August stock list, giving prices and half-tone illustrations of the various goods handled by this firm. It is a compact booklet of 144 pages, and gives considerable information which will be interesting to the trade. The catalogue will be sent to any who ask for it and mention this paper.

There are **HAMMERS** *that "Knock," and there are* **HAMMERS** *that convince. We employ the convincing kind; for instance, we say contact with the Hammer will not discharge an*

Builders' Hardware.

The Gurney-Tilden Co., Limited, of Hamilton, have published a catalogue supplementary to their No. VII. edition of Builders' Hardware. Prices are given on many varieties of locks, knobs, door sets, fresh plates, pull handles, and miscellaneous hardware. The whole is illustrated by half-tone engravings. All hardwaremen will be interested in this price list, which will be sent to any dealer who refers to Hardware and Metal.

BUSINESS CHANGES.

Ontario.

H. Cleland, blacksmith, Stratford, has sold to J. K. Goetz.

E. Kalbfleish, blacksmith, Blake, has sold to C. Brown.

Baker & Burger, brick manufacturers, Fort William, have assigned to R. F. Waddington. A meeting of creditors was held July 21st.

Quebec.

Garland & James have been registered as roofers, Montreal.

Belisle, Viau & Co., have been registered as contractors, Montreal.

Dhalut & Deschamps have been registered as plasterers, Montreal.

De Villiers & Lebrun have been registered as blacksmiths, Montreal.

Provost & Lussier have been registered as carriagemakers, Marieville.

Nova Scotia.

Geo. E. Smith & Co., wholesale and retail hardware merchants, Halifax, have suffered loss by fire.

Manitoba and N.W.T.

A meeting of the creditors of J. A. Stovel, hardware merchant, Edmonton, will be held Aug. 1st.

Twiss & McNeil, dealers in implements, High River, have been succeeded by Alberta Implement Co.

D. D. England has been admitted to partnership with England & Co., plumbers, Winnipeg.

C. Sanderson, brick manufacturer, Edmonton, is dead.

British Columbia.

Mehan & Kirkwood, blacksmiths, Nanaimo, have been succeeded by Mehan & Porteous.

McDonnell & Sykes, painters, etc., Vancouver, have dissolved partnership.

H. P. McDowell, painter, Victoria, has been succeeded by J. Stow.

W. K. C. Manly, hardware merchant, Grand Forks, has suffered loss by fire.

P. D. Dods & Co., (of Montreal), dealers in wholesale paints, etc., Vancouver, have been succeeded by H. Darling.

Ellison & Henry, hardware merchants, Vancouver, have dissolved partnership.

BUILDING AND CONSTRUCTION

CONCRETE IN MINING INDUSTRY.

CONCRETE is now displacing wood in the mining industry. It is found to be more durable, efficient and in the long run more economical than timber and lumber. Concrete is used for lining shafts, airways and other openings, from top to bottom of the various openings. It does away with the water dripping down the sides of the shafts, so common with wood linings, which rapidly deteriorate and must frequently be replaced, while concrete once in place calls for little or no repairs. At the same time it holds the loose rock and earth in place, thus removing the element of danger, which is always more or less present in the wooden linings, especially in deep mining, where death often results from caving in of the sides of the shaft. Great tracts of forest lands are denuded to supply timber required in mining operations, and in numerous instances the timber supply having run short in the immediate vicinity of the mines, long hauls at great expense were entailed to keep up the necessary allotment to permit work to be continued with safety. Concrete displacing wood in mining has brought the desired relief in this respect. Its use is destined to become almost universal in permanent mining operations.

BUILDING NOTES.

Several fine new residences are being erected in Sydney, N.S.

James Lumbers, Toronto, is altering the front of his wholesale warehouse.

A new four-room schoolhouse is to be erected at Fredericton Junction, N.B.

St. Paul's Church, Regina, will be extended immediately at a cost of $10,000.

Two brick dwellings will be erected at the corner of Emerald & Stinson streets, Hamilton.

W. E. Fraleigh and W. G. Breckon, Fort Frances, will commence at once the erection of new stores.

The Winnipeg School Board have purchased three new school sites, the total cost being about $37,500.

R. Press & Son will build a $3,000 house at the corner of Kent street and Stanley avenue, Hamilton.

Alterations at the City Hospital, Hamilton, will be commenced immediately and will cost $44,000.

Messrs. Scott & Burney Bros., are preparing to erect immediately two brick stores in Forest, Ont.

Bulman Bros., Winnipeg, have definitely decided to rebuild. Their new structure will be seven-storeys high.

The Western Commercial Co. are constructing a three-storey solid brick building, 50x80, in Riverdale, Sask.

Ossington avenue Baptists, Toronto, will commence work on their new church in a couple of months. The building will cost $10,500.

The cut-stone front of the Gananoque Harness Works warehouse fell into the street and the building will have to be entirely razed.

The congregation of the Davenport road Presbyterian Church, Toronto, recently authorized, have selected the site for their building.

Contracts for the building of the enlarged Central Congregational Church, Winnipeg, have been let, the total amount being $22,000.

The Sydney Cement Co., Sydney, N. S., have begun the manufacture of Portland cement. This is the first Portland cement manufactured in Canada east of Montreal.

The Keewatin Flour Mills Co., Limited, of Ottawa, have completed plans for the erection of a large fireproof milling and elevator plant to cost $750,000.

Tenders are asked for the erection of a brick-veneer schoolhouse at Shoal Lake, Man. Plans and specifications may be seen at the office of W. M. Ingersoll, Shoal Lake, or of Frank R. Evans, architect, Pacific avenue east, Winnipeg.

Messrs. McDuff & Lemieux, architects, Montreal, are preparing plans for the erection of a new factory building which is to be situated on the south side of St. Antoine street near Windsor street of the same city. The new building will be five storeys high and will have a frontage of seventy-five feet.

All the buildings of the Montreal Light, Heat and Power Co. are to be absolutely fireproof. In the immediate future the work of rendering the big Chambly power station absolutely fireproof will be started, after which the company intend to drop all the insurance they are carrying on their buildings. A saving of $10,000 a year will thus be effected.

The following building permits have been recently granted by the Vancouver, B.C., department: John McLeod, Seventh avenue, $1,000; F. H. Lantz, Harwood street, $6,000; Wm. Herron, Seventh avenue, $1,000; D. Bailey, Pandora street, $1,500; Calder & Hunt, Pacific street, $2,000; J. E. Guinet, Robson street, $1,000; W. L. Jewell, Tenth avenue, $2,300.

Building permits in Regina for the current year have already reached a total of $355,241, and it is estimated that the million dollar mark will be passed by the end of the season. Among the buildings which will be shortly commenced are: Regina Brewery, $30,000; Bank of Montreal, $50,000; Post Office (estimated), $70,000; Cockshutt Plow warehouse, $12,000.

Messrs. Hardenburg & Gilbert, architects, of New York, who are preparing the plans for the new Windsor Hotel in Montreal, have submitted the plans to the directors. The new hotel when finished will be 130 feet in height. Work will be begun about the first of September and it is expected when the Winter sets in that not only will the entire foundation be laid, but a fair amount of the steel structure will be placed.

TORONTO BUILDING PERMITS.

L. Seager, brick dwelling, College street, $1,600.

B. Saunders, brick dwelling, Clarendon avenue, $5,000.

James Brown, brick warehouse, King street, $20,000.

A. W. Sheffield, brick dwelling, Havelock street, $4,000.

M. Sullivan, brick dwelling, 341 Sackville street, $3,000.

Nellie B. Collins, brick dwelling, Olive avenue, $2,500.

A. Petrie, one pair brick dwellings, Givens street, $4,000.

John Hands, roughcast dwelling, Dovercourt road, $1,500.

Consumers' Gas Co., addition to office, Toronto street, $10,000.

H. F. Squires, three brick dwellings, Bathurst street, $6,000.

Geo. H. Sweet, brick bakery, 28 Sorauren avenue, $1,500

Eaton & Co., two pair brick dwellings, Rusholme road, $13,000.

H. Howard Shaver, brick dwelling, Clarendon avenue, $4,000.

T. Clinkinbroomer, brick store, 1450 Queen street west, $2,500.

Mrs. William Weekes, roughcast dwelling, Givens street, $1,950.

Jno. W. Cowan, addition to factory, brick, Mincing lane, $5,000.

Daniel Conboy, concrete factory, Don Improvement road, $40,000.

E. Smith, brick and stone dwelling, 512 Dovercourt road, $3,700.

H. Todd, three pair roughcast dwellings, Hamilton street, $9,000.

Mrs. Jane Carmichael, brick and stone dwelling, 60 Wood street, $3,000.

City Corporation, brick laundry, rear of the Isolation Hospital, $2,200.

S. R. Hughes, brick and stone residence, Palmerston avenue, $5,000.

T. Sproule, two pair stone and brick dwellings, Rusholme road, $11,600.

Mrs. G. Derry, dwelling, brick and stucco, 715 Markham street, $1,800.

Mary and Alfred Nurse, three brick dwellings, Salisbury avenue, $4,000.

Fred. S. Duff, two pair stone and brick dwellings, Beatrice street, $8,000.

Granatstein Rag and Metal Co., brick and stone shop, 126 Agnes street, $2,000.

Blanchard & Courtmanche, two pair brick dwellings, 10 to 16 Golden avenue, $7,200.

Jacob Spring, stone and brick dwelling, corner Teraulay and Alice streets, $2,500.

Permits have been issued from July 10 to 15 for the erection of 47 new

dwellings and other buildings, to cost $191,500.

James Lumbers, alterations to warehouse, wood, glass, steel columns, 67 Front street, $1,500.

MONTREAL BUILDING PERMITS.

O. Belanger, dwelling, 362 St. Hubert street, $4,500.

A Pleau, dwellings, Huntly street, St. Denis ward, $1,800.

Dr. W. A. Molson, dwelling, 854½ Sherbrooke street, $1,800.

A. Loyer, dwellings, Huntly street, St. Denis ward, $2,000.

R. Riset, dwellings, Pontiac street, St. Denis ward, $2,600.

M. Larose, dwellings, Labelle street, St. Denis ward, $1,700.

J. T. Sagala, dwellings, Huntly street, St. Denis ward, $1,600.

E. Pare, dwellings, St. Andre street, St. Denis ward, $2,500.

L. Bergeron, dwellings, Harbour street, Hochelaga ward, $3,000.

N. Corbeau, dwellings, Aylwin street, Hochelaga ward, $3,500.

J. Poussaint, dwellings, Huntly street, St. Denis ward, $1,500.

O. Gagnon, dwellings, Cuvillier street, Hochelaga ward, $2,500.

A. Lagarde, dwellings, Ontario street, St. Mary's ward, $4,500.

O. Vanier, dwellings, Berri street, St. Jean Baptiste ward, $8,000.

J. A. Brosseau, dwellings, Boyer street, Duvernay ward, $2,000.

Dominion Oilcloth Co., alterations to factory and erection of chimney, rear of 88 Parthenais street, $2,300.

T. Charpentier, dwellings, Demontigny street, Papineau ward, $2,000.

P. Archambault, dwelling, St. Hubert street, St. Denis ward, $1,800.

J. O. Gagnon, dwellings, Notre Dame street, Hochelaga ward, $3,300.

Sicily Asphalt and Paving Co., shed, rear of 45 Prince street, $3,000.

Jos. B. King, dwellings, Marquette street, St. Denis ward, $1,800.

N. A. C. Fortier, dwellings, Labelle street, St. Denis ward, $3,500.

I. Moguin, dwellings, Mount Royal avenue, Duvernay ward, $4,500.

P. Barrette, dwellings, Chambord street, St. Denis ward, $1,600.

W. R. Hunton, dwellings, Durocher street, St. Lawrence ward, $12,000.

D. Tremblay, dwellings and store, Forsyth street, Hochelaga ward, $4,500.

Northern Electric Co., factory, corner of William and Guy streets, $31,000.

Canadian Rubber Co., factory, corner Notre Dame and Dorion streets, $3,500.

J. A. Marsan, dwellings, Christopher Columbus street, Duvernay ward, $3,000.

Dominion Express Co., office and shed, Latour street, St. George's ward, $7,000.

Christian Brothers, religious building, Sanguinet street, St. Louis ward, $1,500.

S. Lafleur, alterations to dwellings, corner of Logan and Champlain streets, $1,500.

Estate Geo. W. Stephens, dwelling and store, 32 and 34 St. Antoine street, $50,000.

W. T. Haldimand, alterations to store, corner of St. Antoine and Windsor streets, $1,500.

RENOVATION COMPLETED.

The building occupied for business purposes by the J. R. Walker & Co., dealers in scrap metals, etc., at No. 35 Common street, Montreal, which suffered rather seriously in the upper portion of the building from fire early on the morning of April 23rd, has been rebuilt. The installing of a new elevator and a number of new presses places the firm in a better position to handle the supplies purchased by them more promptly. More room has been obtained by placing as a cover a square roof instead of the old sloping roof. Mr. Walker states that they are now in a position to pack fifty bales of either paper or rags daily, which is considerably better than they were able to do before they were visited by the conflagration of the above date.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

836. A North Country firm asks to be placed in touch with Canadian manufacturers of excelsior packing.

847. A Lancashire manufacturer of nuts, setscrews, rivets, washers and bolts, would be pleased to correspond with Canadian wholesale hardware merchants.

Acts on Forty Per Cent.

more sky area than ordinary prismatic glass, and increases the illumination to the extent of five to twenty-five times.

MAXIMUM LIGHT GLASS

gives a complete diffusion and eliminates all shadows. Can be effectively used when placed directly in the window sash, where ordinary prismatic glass would be useless. Strong. Specially constructed to prevent accumulation of dirt. **You** could sell **Maximum Light Glass.** Get sample.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

At the annual meeting of the New Brunswick Telephone Co., it was decided to erect a number of lines during the present season. A brick building will be erected on Carleton street, Fredericton, for the use of the company's head offices, and the Moncton and Fredericton plants will be improved.

The N. Thompson & Co., machine shops at Vancouver, may re-open at no distant date.

Mining conditions in British Columbia are much improved and there is also great activity in the lumber industry.

The Cushing Pulp Mill Co. has secured property at Kingsville, N.B., and will erect a small plant to prepare wood for use in the pulp mill.

Foley, Lock & Larson, wholesale grocers, Winnipeg, are erecting a five-storey structure to be utilized as a biscuit and confectionery plant.

The R. C. Donald wood-working factory at Sunny Brae, N.B., has been taken over by the Le Blanc-Bourque Wood-Working Co.

The new plant of the Canadian Shredded Wheat Co., Limited, was started in Toronto. Henceforth orders for the Canadian trade will be filled from this new Canadian factory.

The Keystone Sugar Co. have purchased the Whitby Harbor Co's. property for a consideration of $60,000. The sugar company thus have a most satisfactory site for their large beet sugar factory.

The Dominion Carriage & Bearing Co. Limited, will at once secure a charter, and erect a plant at Amherst, N.S. The capital of the company will be $200,000 with power to increase to $500,000.

The Western Canada Cement & Coal Co., of which Sir Sandford Fleming and Premier Haultain are directors, are seeking subscription through the Royal Bank for £225,000 of 6 per cent. first mortgage bonds.

A large addition, 30x100 feet is being made to the factory of the Dominion Suspender Co., Niagara Falls. This will give them more floor space than any other factory in America manufacturing neckwear and suspenders.

H. A. Richardson will establish a peat-making industry at Winnipeg. He estimates that peat fuel produced by his patented process can be supplied to Winnipeg consumers at $5.50 per ton, and will compare favorably with anthracite.

Galt is to have a new industry which will be known as the Power and Gas Machine Co., and will be capitalized at $100,000. The factory, which will be 40x80 feet, will be erected at once, and cement blocks will be used in the building.

The Thorold Board of Trade is negotiating for the establishment of a factory there, to manufacture pulp containers, bottles of that material as well as other articles. An expenditure of $10,000 is probable if the deal goes through.

Ottawa now owns the plant of the Consumers' Electric Light Co. and will operate it under the title of the City of Ottawa Electric Co. City bonds to the par value of $200,000 have been handed over to the Consumers' Co. for the deed to the property.

The Canadian Klondike Mining Co. are importing a piece of machinery weighing 27,000 lbs. to be used in their mammoth dredge, which will be operated at the mouth of Bear Creek. All the bridges on the road over which the big piece passes will require special bracing to withstand its weight.

Many inquiries have been received from foreign firms who wish to purchase Canadian ores direct, especially zinc, chrome, nickel, cobalt, asbestos, mica, phosphate, coal and corundum. Among them are the following: Messrs. Armand & Co., Paris, are willing to purchase copper; M. De Rosenorn, Bordeaux, would like to buy Canadian phosphate; Edmond Gersenberger, Liege, would be willing to purchase ferro-silicon containing 35 per cent. of silicon; F. Pradez, Liege, would like to buy direct zinc and lead ores; Leon Deugmond, Brussels, inquiring about mica deposits; D. Carnegie, Hadfield Steel Foundry Co., Sheffield, for corundum.

The Imperial Steel and Wire Co., Limited, Collingwood, intends to enlarge its plant during the present Summer, bringing its capacity up to 50 tons of wire per day. Work on the buildings for the additional plant has been commenced. The building will consist of a fence mill, 60 x 200 feet, two storeys; galvanizing building, 40 x 250 feet, and warehouse, 100 x 200 feet. The additional machines to be installed will consist of a 250 horse-power water tube boiler and a compound condensing engine of 150 horse-power to drive a 100 k.w. generator. This generator will be used to drive the nail mill, with 40 tons daily capacity; wire fence mill, with 10 tons daily capacity and galvanizing plant, 10 tons per day capacity. The company will install the very latest devices in motors and silent chain drive in the transmission of its power and the operation of its machines. The expenditure on the additional plant will run close to $100,000.

Will Dominion Steel Sell.

Directors of the Dominion Steel Co. laugh at the rumor that the Dominion Steel Co. were trying to interest the United States Steel Corporation with a view of selling out to that concern. This rumor has done duty off and on ever since the steel plant at Sydney was created, and has received impetus from the fact that several U.S. Steel officials

have visited the Sydney works at various periods.

The present revival of the rumor is due to a stock market sheet in Boston, which "understands that Canadian interests are seeking to interest the United States Steel Corporation in the Dominion Co."

Incidentally the paper points out some of the advantages of the Sydney company, and says that when running at full capacity the putput in tons per month is as follows:

	Tons.
Four blast furnaces	36,000
Ten open-hearth furnaces	20,000
One blooming mill	20,000
One billet mill	18,000
One rail mill	20,000
One rod mill	7,000

There are 450 by-product coke ovens, but as it requires from 40 to 48 hours to make coke suitable for blast furnaces from Cape Breton ores, they do not produce enough coke for even three blast furnaces. Consequently only two have been in operation for some time past, but additional coke ovens are now being built to permit of three blast furnaces being kept in continuous operation.

The site of the works covers 393 acres, with a water frontage of 2,400 feet.

Nearly all of the iron ore used by the company is from its own iron ore properties on Great Vell Island, 400 miles from Sydney. This ore bed has an average thickness of eight feet extending over 817½ acres, and is estimated to contain 28,000,000 tons of available ore, besides the areas under the sea, which are believed to be extensive. The ore is red hematite, containing about 50 per cent. of iron, low in sulphur but high in phosphorous. This ore is mined, transported and laid down at the works at a cost of about $1 per ton. The company also secures ore from Lake Superior and from Spain and Sweden. It is claimed that Lake Superior ore can be laid down cheaper at Sydney than it can be at Pittsburg.

GOOD SPORT IN WARM WEATHER.

Lawn bowling is about the only sport or outdoor game which can be thoroughly enjoyed in the hot Summer days. To supply the increasing demand Messrs. Rice Lewis & Son, Toronto, have just received a shipment of Taylor's Scotch lawn bowls in extras and firsts quality; all sizes and weights.

FOLLOWING ENGLISH PRACTICE.

IN England the general public demands much from its public men, and Cabinet Minsters or prominent parliamentarians who allow their names to be used as directors of commercial corporations in which they are mere figureheads, meet with sharp criticism indicative of public disapproval. Those, however, who have served their country for extended periods are not allowed to pass out of public life without having their services recognized, an instance of this being the recent retirement of Speaker Gully, of the British House of Commons, who has been granted the customary retiring allowance of several thousand pounds annually.

Despite the claims of such papers as the Toronto Star, the MacLean Trade Newspapers were the first to advocate the principle that retiring Ministers should be granted annual honorariums, believing that our public men should receive ample remuneration for their public services, sufficient to allow them to live upon their public income without being forced to supplement it by directorate fees from corporations or from other questionable sources. There has been too much talk of the sinister influence of corporations, an influence which can always be expected to be present where public men are weakened by the knowledge that their small salaries are insufficient to do more than meet present requirements, and a realization that no provision can be made for the future.

The advocacy of this principle has met with general approval sufficient to warrant the Government in including in the new schedule of parliamentary salaries a clause providing for an annual allowance to retired Cabinet Ministers of five years' consecutive service.

Members of the Senate and House of Commons are to receive $20 per day. If the session goes beyond 30 days each member gets a sessional allowance of $2,500. There is to be a deduction of $15 a day for each day in which a member fails to attend the House. The salary of the Prime Minister is to be $12,000, and the Opposition leader gets an extra sessional allowance of $7,000. There is to be allowed to each member of the Senate and of the House of Commons his actual moving or transportation expenses between his place of residence and Ottawa, going and coming once each way, but no such allowance shall be made for traveling outside of Canada, except from one point in Canada to another, by any direct route. Members are required to hand the Clerk of the House at the end of each month and at the end of the session, statements of their traveling accounts. Every Minister who has served five consecutive years, as head of a department shall, upon his retirement from the Cabinet, be entitled to an annuity for life equal to one-half of the salary attached to his office. The Liberal ex-Ministers to whom this provision will apply are Messrs. Tarte, Blair, Sifton and Costigan. The Conservatives who will receive the annuity are Sir Hector Langevin, Sir Charles Tupper, Sir John Carling, Sir A. P. Caron, Sir Mackenzie Bowell, Sir C. H. Tupper and Hon. Messrs. Foster and Haggart. Under the wording of the resolution Sir Mackenzie Bowell and Sir Charles Tupper will each draw $4,000 per annum, half their salary while Ministers. All the others will receive $3,500 each.

The bad features of the arrangement are that no provision is made for preventing Cabinet Ministers who have retired in disgrace from participating in the enjoyment of the annuities, and that the retired Ministers who continue to sit as members of the Senate or Commons are to be allowed to receive both annuity and sessional indemnity, while ex-Cabinet Ministers who become judges are not to be allowed to draw the annuity while on the bench.

While it might be difficult to frame a clause defining what would constitute "retiring in disgrace," it would certainly be foreign to the spirit of the new regulations to provide pensions for any who might prove untrue to the responsibilities of the high office of a Minister of the Crown.

In our opinion every Minister who continues in office as a member of the Senate or Commons should not receive the dual salary, and the exemption now applying to judges should also include ex-Ministers who have not retired from public office. We congratulate the Government on their progressive action in making more secure the financial positions of those who shape our country's destinies, but we regret that this legislation was introduced so near the close of the session, lack of time then allowing the legislation to become law without remedying the defects outlined.

TARDY JUSTICE FOR JUDGES.

ANNOUNCEMENT has at last been made that the Dominion Government has introduced legislation providing for an increase in the salaries paid to Canadian judges, the necessity of which The MacLean Newspapers has consistently advocated for several years.

Just a year ago, in the issue of July 2, 1904. Hardware and Metal reproduced an article from an American newspaper criticising the small remuneration given public servants in Canada, a brief extract being as follows:

"Matters on the bench are even worse. The High Court judges in Ontario receive $6,000 a year, and Federal Supreme Court judges, the highest in the land, only $7,000 a year. The insufficiency of these salaries may be gathered by comparison with New South Wales, with a population of only 1,400,000, which pays ten puisne judges $12,500 a year each; Victoria, population 1,200,000, pays $15,000 to the High Court judges, and so in all the Australian colonies. The integrity of Canada's judges is traditional, but the salaries paid are below he earnings of first-class lawyers."

In commenting on the matter Hardware and Metal took the ground that the increased cost of living made necessary an increase in the salaries paid if the ablest jurists were to be encouraged to give up the rich emoluments of private practice for an honored career in the service of the country, pointing out that a deterioration in the personnel of the bench was inevitable unless better salaries were paid. Reference was made particularly to the fact that "the Government continues to keep in office at the salary set at Confederation, the most responsible, the most honored servants of the Crown, the judges of the Supreme Court of Canada, men on whose decisions rest the disposition of millions of dollars, and on whose strength and ability the honor and integrity of our judicial system is in large measure dependent: "Viewed from any standard of comparison, the salaries of our Supreme

Court judges is ridiculously small. Compared with the salaries attached to similar courts in other British colonies, weaker in every respect than Canada, or compared with the salaries paid to the men who attain to eminence in the Canadian industrial, commercal or professonal world, and particularly when compared with the income of any first-class lawyer in this country, the stipend attached to the Supreme Court of Canada is shamefully small and inadequate."

In succeeding issues attention was drawn to judges accepting positions upon the directorate of corporations, $5,000 in shares being given one judge for the use of his name, the company failing, and the judge arguing his own defence when an action was brought against him in an attempt to force him to pay for the stock he held. Hardware and Metal strongly criticised the actions of the judges, pointing out, however, that it was a result of the small salaries paid them, editorials entitled " A Dangerous Precedent " and "Debasing the Bench " being copied extensively and was strongly supported by the press throughout the Dominion.

It is with satisfaction, therefore, that we note the action of the Government, considering, however, that the increase given to the members of the Supreme Court is still insufficient to attract the most desirable men from the bar to this most important of all Canadian courts. If the traditions of British justice are to be preserved, the remuneration given to the occupants of such honored positions must be more nearly equal to the amount the same gentlemen could earn in private practice. Comparing the salaries to be paid judges in Canada with the amounts paid in the Australian colonies, it will be seen that the Canadian figures are still absurdly small and the increase of from ten to twenty-five per cent. should have been at least fifty per cent. Conditions in Canada are vastly different to those existing in Great Britain, where the majority of public men have private means and can afford to accept positions on the bench or membership in the House of Commons for the honor pertaining to the position. In Canada the standard of living and cost of travel is constantly increasing, and many of the most talented and successful lawyers are prevented from accepting positions of public trust because of the sacrifices made necessary by giving up a paying professional practice for an unremunerative position.

According to the new schedule the salaries paid in future will be as follows: The Chief Justice of the Supreme Court is to receive a salary of $10,000 per annum, and the other judges $9,000 each. The judge of the exchequer court is to get $8,000 per annum. The Chief Justices of Ontario and Quebec are each to receive $8,000 yearly. The other High Court judges in Ontario, and twenty-two puisne judges in Quebec $7,000 each. Sixteen puisne judges in Quebec are to receive $5,000 each, two Gaspe and Saguenay, $4,500 each. The Chief Justices in New Brunswick, Nova Scotia, Manitoba, Territories, and British Columbia are each to receive $7,000, the other judges $6,000. In Prince Edward Island the Chief Justice will receive $6,000, the other judges $5,200.

Of the County Court judges, the senior judge of York County, Ontario, is to receive $2,900, 67 other Ontario judges, senior and junior, $2,500 for the first three years, after that $2,900. In Nova Scotia and New Brunswick the salary of the County Court judges is to be $3,000. In Queen's County, P.E.I., the senior will receive $3,500, the others $2,500, and after three years' service $3,000. The latter provision also applies to Manitoba and British Columbia.

It is to be expressly provided in the Act that no judge of any court in Canada shall henceforth, directly or indirectly, act as director or manager of any public corporation, or in any other manner whatsoever engage in any occupation or business other than his judicial duties.

OUR REGINA CONVENTION REPORT.

MacLean Pub. Co., Toronto:

Gentlemen,—"I also beg to compliment you on the excellent report you have given in your July 8th issue of the convention. The work of this convention was better written up in your paper than in any other I have seen, correct in every detail, and I again beg to compliment you on the same."

Yours truly,

R. J. Hutchings,
First Vice-President N.W.T.
Boards of Trade.

Calgary, July 14.

HOW TO STORE VARNISH.

ONE who has had considerable experience in the handling of varnishes, is quoted by the Painter and Decorator as saying that when varnish is stored in barrels it should never be moved about, because after standing a few days a sediment falls to the bottom of the barrel, which consists chiefly of particles of manganese driers and refuse of the gum, known as varnish foots. When this has settled, if the barrel is disturbed by shaking, this sediment mixes with the varnish and turns it streaky and unfit for first-class work, as the varnish when applied over white or any delicate tints clearly shows the faulty varnish by brushing up in dirty irregular patches. The idea prevalent among the users of varnish that unless the sediment be mixed with the varnish the drying power is lost, is a mistake, as the sediment is simply the spent drying agents and refuse from the gums used in the manufacture of the varnish. This sediment can only be removed by allowing it to settle or by passing it through a filter press. A good method of removing varnish from barrels is to insert a treacle tap in the barrel about two inches from the bottom, so that the varnish will run clear of foots, then place on a stand and allow to settle some time before using.

SHOULD RETAILERS SOLICIT?

IN these days of fierce competition, it has frequently been debated at hardware conventions, whether the retail merchant should adopt the methods of wholesale dealers, and aggressively endeavor to force his business upon the consumer.

Should the hardwareman fold his hands and wait for business to come to him, serene in the consciousness that he doesn't need to become a pedlar, or should he emulate the manufacturers or jobbers from whom he himself buys and put a little more of the personal element into his business?

In considering this question, the dealer cannot deny that it is always desirable to increase the number of sales; and, in the hardware business especially, the best means to do it is to make buying as convenient and pleasant as possible. And this latter problem, too, will be differently solved in different localities; different methods would have to be adopted in large cities and in country towns.

It is a universally accepted truth that people buy more than they need. By some it is even estimated that fifty per cent. of their purchases are what they don't need,—or, in other words, luxuries.

Now, in the hardware business, as in all others, there are necessities, and there are, also, innumerable useful and handy articles, which, though not necessary, are desirable, and may be considered as the luxuries of the hardware trade. The merchant who keeps these lines most constantly before his customers is the one who will reap the largest profits, as the demand for hardware necessities is comparatively constant.

In large cities some retailers are trying to capture this trade by adopting the Marshal Field method of making their places of business pleasant and comfortable for customers, some going so far as to instal free telephone booths and reading and writing rooms. But in

the smaller places this is quite impracticable.

Even in the least populous localities, however, the hardwareman can add to his business by keeping his store neat and attractive. If a customer comes in to buy some nails, it is because he needs them. But, if he happen to see a nice array of the luxuries before referred to, it is often possible for the salesman, by a little judicious urging, to sell him a great deal more than the nails.

In many parts of Canada the hardwaremen depend to a great extent upon the farmers' trade, and this is where the merchant can use his aggressive methods. If the retailers would occasionally take an after-supper drive to visit some of the responsible farmers in his neighborhood, taking with him some article of interest to his customer, he could accomplish more in a few hours than by many talks in his own store. A farmer rarely makes up his mind to buy a wire stretcher or a cream separator in the few minutes he can afford to spend in the hardware store on one of his regular visits to town. It would greatly increase the sale of such goods as these if the retailer would begin an aggressive campaign such as is outlined above, and he would soon find his staple lines more in demand as well.

Hardware and Metal throws this out as a suggestion to the retail trade, and as it is a question of paramount interest, invites discussion of it in these columns.

CONDITIONS IN ENGLAND.

REPORTS of business depression in Great Britain have reached this country for some months past, but particulars have not been given in any detail. In a recent issue of the Ironmonger editorial reference was made to the condition of the hardware trade, from which the following extract is taken in order to give our readers an idea of the conditions prevailing in the Mother Country :

"The continued depression of the building trade in all parts of the country, with the solitary exception, perhaps, of London, is now seriously affecting the makers of joiners', bricklayers', and edge tools in Sheffield. These departments enjoyed a remarkable run of prosperity for nearly a quarter of a century continuously, but the conditions today are far worse than they have ever been before. The workmen are earning but a pittance, and manufacturers who are able to make ends meet regard themselves as fortunate. South Africa is a most unsatisfactory market for the goods referred to. These colonies were heavily stocked with tools at the end of the war, and the work of reducing the stocks makes such slow progress that there is no necessity to order new supplies. Nor is there as much building going on in South Africa as might reasonably have been expected."

BUILD UP SMALL INDUSTRIES.

PROSPERITY has been so general in this country of late that the very air seems to breathe of it and people look for it as a matter of course. At the present time the grassy meadows, the fields of growing grain, the loaded orchards and the contented cattle proclaim the fact, while the activity in the warehouse, the busy mill and workshop, running night and day in many instances, tell more plainly than many written chapters the prosperous state of affairs. In spite of this there is many an older settled town and village in Canada at a standstill, when such need not be. The large cities are growing larger, the west and north are being settled in a satisfactory manner and yet a large number of the smaller centres look on and wonder why they do not share in the general advance. They cannot imagine why things do not come their way.

The reason is obvious. They are asleep. Like the ancient town of legendary fame, they have sat down to rest, unable to realize that they have within themselves the potential energy—brains and capital—that rightly directed would double the municipality's population in a few years. While this is not a general state of affairs, the places that should feel guilty on the subject are not few. There isn't a town in Canada included in this category but has men of means, whose capital is unproductive—unproductive beyond the interest of a savings' bank or a loan or mortgage. Such capital placed toward starting a number of small industries of the right sort in the community would act as a magician's wand and change the whole order of things within half a generation.

In most cases towns owe their present size to a few men of pluck and enterprise, who, starting in a small way, have built up manufacturing industries that have been the mainstay of the people.

Since this has been, what greater results might be expected to-day where conditions for manufacturing are so much better than formerly. Because some places have had their fingers burned bonusing something that has not been successful, the moneyed men therein twist a few extra coils around the necks of their money bags and shake their heads at the thought of promoting an industry. Bonusing questionable industries has been an evil in the past and must continue so. A concern started with the sounding of trumpets and the clashing of cymbals by outside individuals with a town's money may succeed all right—many times it hasn't—but let the same industry be started with private capital, the men interested sitting at the directors' board, and there is little danger of the outcome.

Half a dozen smaller concerns covering a variety of manufacture give more stability to a place than a single plant six times as large as the average of the others. If the towns that have not grown appreciably within the past few years would give the matter a thought, and if the men who have the stock in trade to promote industry are public-spirited enough to do so, the way to bring their native or adopted place forward should be clear before them. A number of industries started either under one or separate management and rightly looked after can hardly fail to bring about the desired result.

FAIRBANKS-MORSE NEW PLANT.

CONSTRUCTION is to commence at once on the first three buildings of the new Canadian manufacturing plant of the Canadian Fairbanks-Morse Mfg. Co., Limited, at Toronto. As announced in Hardware and Metal some weeks ago, a splendid site, comprising ten acres of land, has been secured south of Bloor street and between the Grand Trunk and Canadian Pacific Railways, about half a mile south of the Canada Foundry Co.'s works. Plans of the buildings have been prepared, and Mr. Fuller, president of the company, was in Toronto this week completing the necessary arrangements to allow the work to proceed at once.

The buildings to be gone on with at present include a machine shop, 288 x 100 feet, with galleries 24 feet wide on both sides the entire length of the building; a foundry, 72 x 180 feet; a blacksmith shop, 72 x 98 feet; and a power house, 60 x 80 feet. The material to be used in all the buildings will be reinforced steel concrete, the contract calling for the completion of the buildings by October 15. All buildings will be built with blind ends to permit of their being extended as the requirements of the business demand.

It is the intention to manufacture practically the full line popularized by the Fairbanks-Morse Co. in the past, as well as many new lines, but it will be impossible to realize these plans from the outset. The product of the plant at first therefore, will consist of Fairbanks-Morse gas engines, steam pumps, hand cars, stand pipes, and other railway supplies, the output being handled exclusively by the Canadian Fairbanks Co., Limited. Mr. Geo. W. Sparks, of Fairbanks, Morse & Co.'s plant at Beloit, Wisconsin, will be manager of the factory.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 58.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 21, 1905.

JULY conditions of other years are now prevalent. Although a general quietness is noticeable, the demand, comparing it with this month last year, is good. The season on several lines of goods is just winding up and naturally trade will be quiet until the orders for Fall and Winter goods begin to flow in. The majority of travelers are off the road, and this is another cause for the change in the prevailing conditions. All orders for harvest tools have now gone forward, and all that remains in this branch of the trade is the infrequent arrival of small assorting-up orders.

A few lanterns for the Fall and Winter trade are going forward. As all, or the majority, of orders have now been booked for some time, the forwarding of orders will be the principal feature of the trade for some time. A few orders are being received for cow ties, heavy axes, apple parers, cherry stoners, halters, fruit presses, sleigh bells and skates. With the exception of one or two articles the shipments of the last-named goods will not take place for some time.

Lumbermen's tools are beginning to move, and it is expected on the part of the local wholesale jobbers that a good trade will be in progress before very long Considerable cutting in the prices of hand saws has been going on for some time between the local jobbers. This is especially noticed in the brands imported from the United States. The matter has been looked into by the manufacturers, and it is expected that prices will assume a much steadier aspect. It is believed that there is a movement on foot to advance the price of home-manufactured cement, but as yet no change has occurred at this point.

The season on such articles as spring hinges, green wire cloth and poultry netting has practically ended. The brisk trade in sporting goods has slackened. Local dealers are not alarmed at the present condition of the market. In fact, they expect it to remain quiet until the middle of September, when retail merchants will begin to strengthen their stocks to meet the demand of the late Fall and Winter trade.

Axes—A few orders have been booked for the heavier variety of axe. With this exception trade is quiet, as it is yet early to forward shipments on orders booked some time ago. Prices are steady and in all likelihood will continue so for some time. We quote as follows: Chopping axes, unhandled, $6 to $9.50 a dozen: double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—As it is too early to book orders for Winter trade the conditions on this market are quiet. Our quotations are as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—The demand is showing a tendency to decrease. Prices are firm at the figures quoted below. We quote as follows: Hand sewing machines; $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—Conditions of a week ago continue. No change is expected to occur until much later in the year, when orders for Spring delivery will be booked. Prices are firm and unchanged. Our quotations are as follows: Cold blast, $4.50; No. 0 Safety, $3.50.

Barb Wire—A few orders have been booked for job lots. These orders are well assorted and denote the winding up of the season. We quote as follows: $2.75 for 100 lbs. f. o. b. Montreal: $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—The season for this article is drawing to a close, and all that remains is to forward a few orders which were booked some time ago. Prices continue unchanged. Our quotations are: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—Trade conditions remain prictically the same. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Manufacturers report a much quieter demand. They expect these conditions will become brisker later on in the Fall. Prices continue unchanged. Our quotations are: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—A good demand continues, and general conditions remain practically unchanged. The majority of the orders are being received from the machine shops. Our quotations are: Three-eighths and smaller, 60 to 10; seven-sixteenths and larger 55 to 5. Activity rules.

Wire Nails—No further decline has occurred on this market. The demand is much quieter, which is natural at this time of the season. We quote: $2.10 to $2.20 a keg f.o.b. Montreal.

Cut Nails—A fair demand only is the best that can be said of the trade on this market. Prices are firm and remain unchanged. We quote: $2.20 a keg f.o.b. Montreal.

Horseshoes—The general conditions of a week ago are still prevalent on the market. We quote: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all sizes 0 to 4, $5.50; toe weight, all sizes 1 to 4. $6.75. Packing—Up to three sizes in a keg ten cents per hundred pounds. More than three sizes twenty-five cents.

Horse Nails—Conditions remain the same.

Sporting Goods — The majority of orders have now been booked, and the principal item is to get the orders forwarded on time. Orders of this year show a great increase over previous years, especially in rifles and ammunition. Prices are firm and unchanged. Our quotations are as follows: Canadian-made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—A steady demand is in progress. Manufacturers anticipate a noticeable increase over the trade of last year. Three-ply roofing has the best demand, and orders for this material are being received continually.

Cordage—Most of the binder twine has now gone forward, although a few sorting-up orders have been received. An advance is noted in cotton rope and sash cord. The advance ranges from one cent to two cents per lb.

Cement and Firebrick—A feature of this market this season is the absence of large contract orders. Small jobbing orders are being received, but the majority of these are local, and it is estimated that outside dealers are ordering direct from the home producers. A movement is on foot to advance the price of the home product, which may take place at any time. Trade in firebricks is quiet from the jobbers' point of view,

although shipments from the foreign markets are continually arriving. Home trade will probably brighten up before the close of navigation. Our quotations are as follows: English cement, $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $1.90 to $2.00. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—Trade conditions remain the same. Prices are firm. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Coil Chain—A better demand for heavy chain is noticed. As this demand is generally small, it will in no way affect the price list. We quote the following: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9 16 inch, $3.30; 5-8 inch $3.20; 3-4 inch $3.05; 7-8 inch, $3; 1 inch, $2.95.

Green Wire Cloth—Practically speaking the season has now drawn to a close, and orders from now on until the opening of next season will be scarce.

Poultry Netting — The demand is gradually decreasing, and a few more days will finish the trade on this market. We quote: Discounts for two inch nineteen gauge standard, and sixteen gauge extras, at 60 per cent.; finer meshes, 55 per cent.

Spring Hinges—Conditions have become quiet. Prices remain the same. We quote as follows: No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—Some large orders have been booked during the week. A large stock is being held by the local jobbers, and all orders are being forwarded immediately. Prices are firm and continue unchanged. Our quotations are as follows: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

—

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
July 21, 1905.

BUSINESS among Toronto wholesalers shows very little falling off, in spite of the fact that the travelers are now enjoying their well-earned fishing in the cooler parts. Orders, however, are mostly for sorting up, and will be of that nature until the opening up of the Fall trade.

Sporting goods are beginning to move strongly, and this is, perhaps, the feature of the week's business. Fishing tackle and ammunition have been most in demand.

The great building operations going on throughout the province permit no falling off in the orders for wire nails, screws, bolts, nuts, rivets, etc.

Farmers are building and repairing fences in the interval between crops, and there is consequently a good demand for spring wire.

No change is noted in cement, and the demand continues strong. There is practically no change in last week's quotations.

Lawn Mowers—The lateness of the season accounts for inactivity in this line.

Sporting Goods—Orders are coming in already for guns and ammunition. A good season is expected.

Washing Machines—There is still a good demand for wringers and machines.

Chain—No change is reported in trade conditions. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Dealers are well satisfied with their sales. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Business is good at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Large orders are being received as farmers are seizing upon the lull after haying to build and repair fences. Prices unchanged.

Barb Wire—A brisk demand is reported.

Wire Nails—Business remains firm at last week's prices. Nominal quotations are $2.25 f.o.b. Toronto.

Cut Nails—Trade continues satisfactory. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Though the usual July falling off is evident, the trade is particularly good for the season. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—A seasonably light trade is noted. Prices are the same.

Screws—Large orders are met by a good supply.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—No falling off is experienced and prices are steady.

Cordage—Large orders are being received for binder twine and hay fork rope, at unchanged prices. We quote: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—Prices are unchanged, though a strengthening is expected as a result of tariff changes. Our quotations are as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—No change in condition may be noted. Prices remain as before. Our quotations are as follows: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper—There is a brisk demand and prices are maintained well.

Hides, Tallow, Skins and Wool — Receipts of hides and wool are light owing to good demand and the readiness of local dealers to pick up stock in the country. Such men are paying relatively more for fleece wool than the larger interests can afford to pay. Deacons have been crossed from the list. We quote as follows:

Hides, No. 1 green steers, per lb	....	0 10
" " 2 " " "	....	0 09
" No. 1 green, per lb	....	0 09½
" " 2 " "	....	0 08½
Country hides, flats, per lb	0 08½	0 09
Calf skins, No. 1, selected	....	0 10
" " No. 2	....	0 08
Sheep skins	....	1 25
Lamb skins, each	....	0 55
Shorn pelts "	....	0 45
Rendered tallow, per lb	0 04	0 04½
Unwashed wool, new clip, per lb	....	0 15
Wool-washed fleece	....	0 25
Pulled wools, super, per lb	0 21	0 23
" " extra "	0 22	0 24

For Manitoba, British Columbia and Maritime Province markets see following pages.

—

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 21, 1905.

JUDGING by the continued advance on certain lines of metals, the trade is in a much better condition. Such, however, is not the case, and it is feared that foreign buyers are responsible for the continued advance in the prices. Orders are coming in more freely, but the increase in the home demand does not warrant the advance in price. The most appreciative orders of the week were those booked for pig iron. The price of the home product is so low that many founders throughout the country are using the pig variety where they would otherwise use scrap; hence the marked increase in the demand.

Antimony still continues to advance, owing, no doubt, to the inability of the Japanese and Chinese to ship from their mines. Local dealers do not agree on the figure for booking, and as a result a wider range is quoted. Sheet zinc and ingot tin have also advanced. Ingot zinc has been advancing on the foreign market, but as yet no change has occurred here. There is at present, however, a strong tendency for an advance. The most notable change is in the case of pig lead, which has advanced from 25c. to 40c. per ton.

Pig Iron—Orders booked last week are much larger and numerous, and at present there is a good outlook for a strong and brisk trade this Fall. Prices on Canadian iron are firm, but no change has taken place. We quote:

"Disc," No. 1.....$16.50 delivered Montreal.
"Dom.," No. 1..... 17.50 " "
Usual difference in price for lower grades.

Ferrona No. 1	$18.00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.50 to 19.00	delivered	Montreal.
Clarence No. 1	17.50	"	"
" No. 3	17.00	"	"
No. Cleveland	17.50	"	"

Bar Iron—Local wholesale hardware merchants report a better demand for this article. The demand which has now begun may continue for some time, as the blacksmiths will begin stocking up in a few weeks. We quote: Merchant bar, $1.80; horse-shoe iron, $2.02 1-2; forged iron, $2.05; best refined iron, $2.20 net cash thirty days.

Tool Steel—The demand, which increased wonderfullv a few days ago, is continuing unabated, and at present there are good prospects for a steady brisk trade. Prices are firm, but remain unchanged. We quote as follows: Colonial and Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—A steady trade is prevalent. Prices continue unchanged. We quote: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2: spring, $2.75; toecalk. $2.62 1-2; machinery iron finish, $2.10: reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold-Rolled Shafting—The Canadian machine shops continue to purchase large shipments. Trade is of a better volume than that which has been attained in previous years. Prices remain the same. We quote as follows: Cold-rolled shafting, 3-4 inch to 17-16, $3.85 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Canada Plates—Canada plates have been used so extensively for building purposes this year that local dealers find the demand very heavy. Large orders are being continually booked, and it would not be surprising if an advance occurred shortly. Our quotations are: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized, 52's, $3.90 to $4; 60's, $4.15 to $4.25.

Galvanized Iron—The demand still continues steady and active. No feature, other than that already mentioned, has been prevalent this week. We quote: Queen's Head, 28 gauge, $4.15; 26 gauge $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra.

Black Sheets—No change has occurred on this market. We quote: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—Prices still continue to advance, which is no doubt due to the inability of the Japanese and Chinese miners to supply the market. Different prices are being quoted on this market and therefore a wider range of prices is given. Our quotations are: 13 1-2 to 14 1-2 cents.

Sheet Zinc—The advance in price which has been looked forward to for some time has at last taken place, it having advanced 25 cents. The heavy foreign demand along with the small increase in the home demand is supposed to be the cause for this change. We quote: Cask lots, $7.25; small lots, $7.50.

Tin Plates—The demand continues to be steady with firm prices. We quote the following: Cokes, $3.75; charcoal, $4.00.

Ingot Tin—Another advance of 1-2 cent per lb. tends more clearly to show that the output is unequal to the present demand. Prices are very firm and if the present demand continues the prices may advance within a few days. Our quotations are: 34 to 34 1-2c. per lb.

Ingot Copper—Local dealers state that it is very difficult to purchase copper for filling orders. The market is strong and the present active demand may cause an advance. We quote as follows: 16 to 16 1-4c.

Ingot Zinc—This market has become much firmer and at present there is a strong possibility of an advance. One is reported as having already taken place on the foreign market but nothing has taken place here. We quote: 6 1-4 to 6 1-2c.

Pig Lead—Another advance is noted this week. The market has become very firm and local dealers are anticipating something further in connection with the advancement of prices. Our quotations are: $3.75 to $4.00 per ton.

Boiler Tubes—A steady demand is still in progress. The outlook is for a continuation of the present prevailing conditions. We quote the following: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12 1-4; 3 1-2 inch, 16c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Scrap Metal—The warm weather has affected the local market materially inasmuch that the amount of scrap metal purchased by the foundries has fallen off. Scrap iron is showing a tendency for a further decline. The market as far as outside purchasers are concerned is quiet and is expected to continue so until later on in the Fall. Our quotations are as follows: Heavy copper and wire, 12 3-4c.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to 9c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove-plate scrap, $9; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-2 to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 21, 1905.

A SLIGHT slackening off is reported, but trade is, on the whole, very good for this season of the year. The revival of the market in the States has developed a better tone here and prospects for business during the balance of the summer are most satisfactory. Many mills have shut down during the warm spell and goods will be harder to get in consequence.

The advancing prices in foreign markets have not affected quotations in Toronto beyond giving them additional strength and firmness. Tin is very strong and even at the high prices there is much activity. Copper is also moving lively, while antimony is still attracting a great deal of attention.

Pig Iron—No changes have taken place, business being fairly lively.

Middlesboro, f.o.b., Toronto	$20 00	$20 50

" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Trade is very brisk with prices held firm at the old figures. Our quotations are as follows: $1.85 f.o.b. Toronto, with discount of 2 per cent.; for extras as cut to length, while rolling, 2 feet and over, 10c. per 100 lbs., 1 foot and under 2 feet, 15c.; under 1 foot, 20c.; over 20 feet, by special agreement according to length and size.

Tin—Prices continue to advance in outside markets, the result being to make prices very strong here. There has been no further advance on the local market. We quote: 34 to 35c. per lb.

Tin Plates—The strong demand and general activity is giving added strength to prices, which are unchanged.

Galvanized Sheets—There is a heavy demand at the same quotations.

Canada Plates—Sales are fairly large with no change in prices.

Brass—Conditions are unchanged, business being fairly active. Discounts continue at 10 per cent.

Lead—Demand continues strong at firm quotations. We quote: Pig lead, $3.80 per 100 lbs,. and bar lead, $4.80 per 100 lbs.

Zinc Spelter—An average trade is being done. Prices are steady. We quote as follows:, 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Activity is reported. A large trade is doing and quotations are unchanged., We quote: Ingot copper, 15 3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—No decline has taken place, the recent advances holding strong. A large volume of business is reported. Our quotation is 14c.

Old Material—Demand for iron from outside buyers is not as strong, but lead, copper and brass are all active. Dealers' buying prices are: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.;

LONDON METAL MARKETS.

From Metal Market Report, July 19, 1905.

Pig Iron—Middlesboro No. 3 foundry is quoted at 45s. 4 1-2d, and Scotch warrants at 49s. 4d., making prices as compared with last week unchanged for Middesboro and unchanged for Scotch warrants.

Tin—Spot tin opened easy at £143 12s. 6d., futures at £142 10s., and after sales of 130 tons of spot and 300 tons of futures closed strong at £144 7s. 5d. for spot and £143 7s. 6d. for futures, making price as compared with last week £1 7s. 6d. higher on spot and £1 8s. 6d. higher on futures.

Copper—Spot copper opened firm at £66 13s. 9d., futures £67, and after sales of 500 tons of spot and 700 tons of futures closed strong at £67 for spot and £67 7s. 6d. for futures, making price as compared with last week £1 higher on spot and £1 7s. 6d. higher on futures.

Lead—The market closed at £13 15s, making price as compared with last week 3s. 9d. higher.

Spelter—The market closed at £24, making price as compared with last week 2s. 6d. lower.

U.S. METAL MARKETS.

From the Iron Age, July 20, 1905.

THE long delayed buying movement in pig iron has come rather unexpectedly and while it has not developed in any large proportions yet it has greatly encouraged sellers. Some of the leading consuming interests, and notably the Cast Iron Pipe Consolidation, started the buying. This interest took about 26,000 tons of southern iron at various prices at and below $11, Birmingham. Other melters followed, and in the aggregate a considerable tonnage was placed in all the principal distributing markets.

In the east some round lots of basic pig were taken by steel works, aggregating about 15,000 tons. Rolling mills placed orders in moderate individual amounts for a good deal of tonnage for the next quarter. In the Pittsburg dis-

tricts the mills also bought quite a quantity of forge grades.

From Chicago comes the report of sales of malleable pig aggregating about 20,000 tons, of sales of basic pig to a local plant of 10,000 tons and of purchases by a St. Louis car builder of about 10,000 tons of foundry iron.

Orders from the general foundry trade have been in fair volume and have been well distributed. Much of the business was done at low price, at $11 and under, Birmingham, but now $11.25 for early delivery has become scarce and the leading makers ask $11.50 and upward for delivery during the balance of the year.

So far as can be learned consumers have only partially covered requirements for the balance of the year. From Cleveland comes the report that a buying pool has been formed in that important foundry centre among buyers of pig iron.

The business in the heavy lines—steel rails, plates and shapes—continues very satisfactory. There is little prospect of any advance in official prices, but it seems likely that premiums on shapes may become more general. The largest contract placed during the week was that for 15,000 tons for the Poughkeepsie Bridge.

In the lighter lines there is a notable movement in the steel bar trade, and a better feeling prevails in sheets. In these branches, as in the wire trade, the stocks in the hands of distributers have been pretty well worked off.

The leading tin plate interest has a large accumulation, collected in anticipation of a possible strike.

The export trade goes on in a very satisfactory manner. It is an interesting fact that in spite of the rush for material for home use during last Winter and Spring the export tonnage of the United States Steel Corporation during the first six months of this year was only 46,000 tons below the shipments of the corresponding period of last year, when export work was sought so vigorously and effectively. Last year the total shipments for six months ran a little above 500,000 tons. This year they are slightly below that figure.

MINES AND MINERALS.

The Canadian Metal Co. are progressing rapidly with their smelter at Frank, Alberta, and expect to be running by the 1st of September.

* * *

Seattle capitalists have a bond on a newly-discovered iron property at Ouatsino Sound, Vancouver Island, and are talking of establishing a $500,000 smelter.

* * *

Mr. Townsend, of Louisburg, C.B., lately discovered peculiar stones near that town, which he believes are diamonds. The stones are represented as hard and transparent, and will cut glass readily and sparkle in a dark room.

* * *

The Board of Trade, Nelson, B.C., the centre of the silver-lead ore industry, have unanimously passed a resolution that it is their wish that the payment of bounty on lead ore be not extended after June 30. Those present were all interested in silver-lead mines. The consensus of opinion was that the bounty law was not a success. Since the order-in-council enacting the bounty provision on lead went into effect the Dominion Government has paid out more than $400,000. The encouragement applies to ore exported as well as that smelted in the country. Practically all the bounty payments have gone to British Columbia.

* * *

The biggest discovery made in the history of coal mining in Canada was made a few days ago when the famous Mullins seam, which has been lost for upwards of fifty years, was located near Lingan, about seven miles from the Town of Glace Bay. N.S. The discovery has created a big sensation among mining men, and President Ross and the officials of the Dominion Coal Co. are exceedingly jubilant over it. The seam shows thickness of nearly 6 feet, and is computed to contain over six hundred million tons of coal. It underlies all the other seams controlled by the company. The work of developing the seam will be started this Fall.

New Brunswick Trade News

St. John, N.B., July 18, 1905.

HARDWARE trade, though characterized to some extent by the usual "midsummer dulness," is, nevertheless, not without redeeming features. When account is made for this "midsummer dulness," the business in the hardware branch of trade may be spoken of as fairly good. In some lines of goods there is a tendency somewhat in evidence toward slightly lower prices. On the other hand, certain articles show a tendency toward a stiffening in price, so there is, perhaps, no reason for any complaint. If any reason for complaint does exist, it is found in this fact,—collections are far from being of the best. However, this state of affairs will probably be remedied before long, so complaint is not very reasonable after all.

An event of some importance and which may, perhaps, be fittingly mentioned here, sook place recently. This was the launching of the ferry steamer Ludlow. Such a happening is worthy of notice here because the Ludlow was built at a local foundry—the Phoenix Foundry of the Messrs. Fleming—and because she is the first metal craft to be built here. For many reasons the launching of the Ludlow attracted a good bit of attention here, and the Fleming people are deserving of credit for their work on her.

A word may not be amiss concerning refrigerators, hammocks and carpet sweepers. This is a timely season for the pushing of these goods and local merchants, who have realized this, have had no reason to be dissatisfied with the result. The time for the rush in the hammocks' sale is, of course, now drawing near its close, but the general report is that the season has been a good one. Prices have been steady and demand active. Refrigerators are coming into favor more and more. One fact that is against larger sales is the comparative highness of the figures at which they are sold. The contention may be made that the prices asked are not unreasonable, and that may be right enough, but it is tolerably certain that a refrigerator offered at a really low figure and which is at the same time a serviceable article is needed in many stores. The demand for carpet sweepers is growing here, with many dealers at least. At this time of year when wielding a broom is provocative of unpleasant warmth, a carpet sweeper is sure to make friends of the housewives. Some merchants have realized this and increased business has resulted. Others will do well to consider the matter.

The wire fencing season is now practically over, though a sale now and then is reported. Fencing staples, however, are rising slightly, though the upward tendency is not particularly noteworthy.

Linseed oil is an article that has received its share of attention lately. This oil is worthy of attention at this stage because of the price which it is bringing compared with the price of last year. Its present figure is away above that which it brought twelve months ago, and for that reason opinions regarding the oil are apt to differ according to one's point of view. Turpentine is strong just now with prospects of remaining so. The prevailing price is now about $1, ranging from that figure down to 90 cents.

Zinc is selling at about 7¼ cents by the cask. Spetter is approximately the same. Horseshoe nails and horse shoes are in fair demand. Of the former, No. 8, countersunk, are about $8.75 per hundred weight; No. 7 being $9.60. Bar iron is firm, showing no change; galvanized iron is in good demand.

Nova Scotia Trade News

Halifax, N.S., July 18, 1905.

THE local market is steady and price firm. A fairly good jobbing trade is reported, but it is not quite up to expectations. Collections show no change, and the scarcity of ready money is much in evidence.

Another Halifax hardware firm has been hard hit by fire. This time it is George E. Smith & Co., whose premises are situated at the corner of Bedford Row and Cheapsides. On Saturday afternoon, while the place was closed, fire was discovered in the fourth storey, and before it was extinguished the fine stock was ruined, principally by water. The loss by fire was very light. The fire is supposed to have been caused by spontaneous combustion in some oakum, which was stored on the top floor, spread to a quantity of cotton waste, and then ignited some 200 wooden rakes which were on top of the lot. The firm's stock is valued at about $50,000, and it is expected their loss will be about $25,000. There was $30,000 insurance on the stock, and $12,000 on the building, nearly all of which is held by local companies. The firm will resume business at once.

During the week the first Portland cement made in Canada was turned out at Sydney. The tests were highly successful, and the cement is said to be of excellent quality. The test fully demonstrated what the plant is capable of doing. The plant has a capacity of 500 barrels per day of twenty-four hours.

The moulders who went on strike for more pay at J. Hillis & Sons' stove foundry, are still out.

Reports from Amherst say that the industries of the town are booming. The Robb Engineering Co. have received during the week an order for a 150-horse-power boiler for the Good Shepherd Asylum, Quebec, one 80-horse-power engine and boiler for the Electric Light Co., of Golden, B.C., and a 50-horse-

power engine for the Dunlop Tire Co., of Toronto.

The price of turpentine here is fluctuating from 90c. to $1. Other quotations are as follows:

Lead pipe	$ 4 70
Sheet zinc, in casks	7¼c.
" " 5 sheets and over	7¾c.

British Columbia Trade News

Vancouver, B.C., July 20.

LAYING a finger on the weak point in the condition of the Kootenays as to mining development is a difficult thing to do. Perhaps an expert who was one of the party of the American Institute of Mining Engineers, who last week visited the province, came nearer than any one has yet, when he said that too much money spent in machinery and not enough in actual development work was the cause of the backward condition of mining in the Kootenays. He said that he could point out where fully $2,000,000 worth of mining plant lay idle in the Kootenays and had never earned a cent. That sum, he pointed out, could work wonders judiciously spent in development work.

In nearly every section of the Kootenays are mines where the blocking out of ore has been neglected to attend to the immediate profit to be secured from raising what was actually in sight and milling it. The money went in this work, in erecting machinery and in paying dividends, and when the ore in sight was worked out, no money was in hand to develop further. The eminent engineer who expressed this homely view of the situation probably struck the nail squarely on the head, and it remains if those to whom he spoke will take heed of the words of wisdom.

* * *

The lead production of the Kootenays for the year ending June 30 was a little over 27,871 tons, of which 17,000 tons was produced in British Columbia, and the remainder exported. The bounty is less for the lead from exported lead than from that treated locally. It is paid on a sliding scale varying with the price of lead in London. This year the amount to be disbursed will be about $340,000 out of a total of $500,000 set aside for the purpose by the Government. The production of lead this year is the largest but one in any year in the history of the industry in the province. In 1900 it was 31,674. In 1903 the year before the bounty was given, it was but 9,044 tons. Last year it was 18,323 tons.

* * *

Kamloops coal is the latest competitor for notice in the coal areas of the province. A development company has holdings south and west of the town, and shafts sunk 380 feet have cut seams aggregating 40 feet in thickness. A mining company now has options on the property, and as the same company has recently erected a 50-ton smelter for the Iron Mask mine, it will develop the coal for coking purposes if it takes up the option. The coal is of superior quality for coking. The deposit is thought to underlie the whole Town of Kamloops, and one enthusiast predicts that shafts will be sunk some day within a stone's throw of the city hall.

* * *

The coal areas of the Similkameen district are likely to receive further attention this year, by reason of the railway extension now going on to reach that district. There are coal deposits all over the district. That at Princeton is 19,200 acres in extent, with 60 feet of coal in strata varying from 2½ to 18 feet thick. It is of very fine coking quality. Analyses show fixed carbon from 54 to 74 per cent.

* * *

The employes of the building trades, beginning with the carpenters, have demanded that the weekly wage be paid in cash, not in cheques, for several reasons, one being that the men are often compelled to buy something to get the cheque cashed, and also they often get them cashed in saloons. The carpenters receive their demanded currency, and the other trades followed. No trouble is anticipated, as the employers as a rule are willing to accede to the request.

* * *

The British Columbia Electric Railway, which last week took over the Lulu Island branch of the C.P.R., running to Steveston, and is now operating it as an electric tramway, is to build in North Vancouver, the rising community across Burrard Inlet. In that district they are to build five miles of railway, and to extend as needed. The franchise is for fifty years and was voted on by the ratepayers and approved. The same company also gets the lighting franchise and street lighting also.

* * *

Mr. E. Tougas, head of the Montreal house of P. D. Dods & Co., left for home on the 10th, after completing the transfer of the firm's Vancouver business to Mr. H. Darling, who has bought it out. Mrs. Tougas remains here for some time with her son, Mr. Allan Dods, who has been manager in Vancouver. He has been in poor health some months.

* * *

Three thousand tons of cargo for Vancouver wholesalers is being discharged from the Bark Nivelle, from Liverpool to Victoria and Vancouver. One consignment consisted of 4,000 bbls. of British cement, and the rest was mainly heavy metals, and manufactures of steel. A temporary shed had to be built at the C.P.R. wharf to accommodate the cement.

* * *

Fire on Saturday night last destroyed the store and stock of the Manley Hardware Co., Grand Forks, B.C. Mr. A. A. Richardson, appraiser, has been sent to adjust the insurance and appraise the loss.

* * *

The first gold brick from the Cariboo Consolidated Co.'s mines at Bullion, Cariboo, this season, has been received by the Bank of Montreal. It is valued at $25,000 and represents the first partial clean-up of the season.

* * *

A casting weighing five tons and measuring 10 feet long by 6 feet high was turned out by the Albion Iron Works, for the steamer New England. It is a part of the condenser which broke down recently. The successful making of such castings is inducing boats and steamers to have their repairs done in Vancouver.

* * *

Gustave Loeb, of the banking firm of Kuhn, Loeb & Co., New York, has been inspecting the property of the B. C. Copper Co. in the Boundary district, as the company is about to double its capital to $4,000,000, and the New York bankers are to handle the shares. It is possibly the same banking house will finance the Midway-Vernon Railway.

* * *

The British ship Springbank has cleared with a million and a half of B.C. lumber for Melbourne, Australia. She had 400,000 feet of California redwood aboard, which she loaded before coming to this port.

WHITE LEAD SITUATION.

THE change in the tariff which resulted in the advance of the duty on white lead from five to thirty per cent., has caused several meetings of the grinders of Montreal. Although everything on the surface appears to be smooth, nevertheless a fair portion of the opinions which have been offered "on the quiet" have been far from favorable to the recent change.

Two meetings of the leading Montreal lead grinders were held last week, while others were held this week which resulted in two different deputations journeying to Ottawa and interviewing certain members of the Cabinet in the hope that some clauses in the new Tariff Bill might be rectified.

The clause relating to the classification of white lead purchased by Canadian grinders before and after the change came into effect, is rather indefinite, and this is the point to which the Montreal grinders took exception, and which was the cause of the two visits to Ottawa.

The first deputation journeyed to the capital on Monday afternoon, July 17, and was composed of Messrs. R. Munro, of the Canada Paint Co.; Henderson, of Henderson & Potts, both of Montreal. Members of the Cabinet were interviewed, the principals of which were Mr. Fielding, Mr. Fitzpatrick, and Mr. Cartwright, and the chief object sought was to gain, if possible, an extension of time on the Amendment Act. The date named was the fifteenth of September. Due consideration was promised by the members interviewed, but the deputation returned feeling anything but satisfied. At a meeting held almost directly after their return it was decided to send another deputation, and gain if possible something more definite.

The result of this meeting was the sending up of Mr. C. C. Ballantyne, of the Sherwin-Williams Co., of Montreal; Mr. R. Aird, of the Canada Paint Co., and Mr. Kinghorn, of the Montreal Rolling Mills. Another interview was secured, but as far as can be learned nothing definite was arranged, as the Senate was already debating upon the sug-

TELEPHONE, MAIN 3893

gestions put forward by the first deputation.

A strong plea to more closely define the clause relating to the re-selling of the lead was presented by these three gentlemen. This part of the Act was to the effect that all lead purchased on the foreign market and sold by the Canadian grinder before the date of the enforcement of this Act must be admitted into the country at the old rate of duty, namely, five per cent. This in itself is very indefinite and, furthermore, there is nothing to prevent a grinder who will stoop to practice underhand work from re-dating his orders, or adopting some other unfair means of benefitting himself and his customers. Even should the Government keep a strict supervision over each grinder's books, it would be possible to doctor them so as to avoid detection except by those on the "inside."

An instance occurred recently where a retail merchant residing in the country wrote to one of the leading grinders of Montreal and complained of the slowness of the grinder to forward his order for white lead, which he had booked some two months ago. This grinder admitted that no such order had been booked, but that this letter was nothing other than a hint for the grinder to forward the shipment of ground white lead at the old prices, and he—the retail merchant—would co-operate and help the grinder in his underhand work if he chose to follow that manner of transacting business. In all probability this method will be adopted by some, no matter how strict a watch is kept by the officials. On these grounds, then, it is claimed that it would be much better for Mr. Fielding to withdraw the clause respecting the purchasing and selling of the lead before a certain date. Besides being more satisfactory to the Canadian grinders of white lead, it would also save the Government unnecessary labor and worry.

DEATH OF CHAS. GARTH.

MR. CHARLES GARTH, president and managing director of the Garth Company, general steam and gas fitters and plumbers, of Montreal, passed away at 10.30 a.m. on the morning of July 18th.

The late Mr. Garth was born at Rochdale, Lancashire, England, on Aug. 25, 1822, and came to Canada with his parents when he was four years of age. In 1838 he took managing control of his father's business and became its sole proprietor when his father, George Garth, accepted the management of the Montreal Gas Works. On the business becoming a limited company he preserved a controlling interest and was its president and managing director. In 1861 he was made president of the Mechanics' Institute, of which he was a life member. He represented Centre Ward in the City Council, and at the time of his death was a member of the Board of Trade, a governor of the Montreal General Hospital, and a governor of the Montreal Diocesan Theological College.

For some years the late Mr. Garth was treasurer of the Diocesan Synod of Montreal. He was an ex-president of the Montreal Cotton Company, and president of the Windsor Hotel.

PERSONAL MENTION.

Mr. Peter McMichael, manager of the Dominion Radiator Co., Toronto, is in Winnipeg this week.

Kerr & Coombe's Foundry employes, Hamilton, held a successful picnic at Niagara Falls last Saturday.

Mr. Henry Clucas, of the Canada Paint Co., Toronto, is back in harness after a holiday trip up the lakes.

A small explosion took place in works of the Dominion Cartridge Co., at Brownsburg Quebec, on July 14.

Mr. J. E. Seale, hardware merchant, of Morin Flats, Que., was a visitor to the hardware trade in Montreal this week.

Mr. W. R. Ross, of Frothingham & Workman, Limited, Montreal, is spending his vacation at Lac Des Isles, St. Agathe.

Canadian Rubber Co., of Montreal, ran a very successful picnic to St. Ours by the steamer Three Rivers, on Saturday, July 15.

Mr. John T. Sheridan, president of the Pease Foundry Co., Limited, Toronto, is in Winnipeg this week consulting with the management of the Pease-Waldon Co.

The staff of molders employed by the Pease Foundry Co., at Toronto Junction, found it necessary to lay down their tools during the hot weather of the first of the week.

A small fire started in the works of the Canada Paint Co., Montreal, early on July 17. The flames were, however, subdued by the company's own men before any serious damage was done.

McClary Mfg. Co.'s molding shop at London has been shut down temporarily by the company owing to a number of men absenting themselves from duty last week. The shop will re-open in a few days.

Mr. Jas. J. Murphy was a welcome visitor at the Montreal office of Hardware and Metal last week. Mr. Murphy is a resident of Quebec City, and deals extensively in cements, firebrick, fire clay, and contractors' supplies.

The wholesale hardware firm of Frothingham & Workman, Limited, of Montreal, are to open a new branch office and warehouse in Winnipeg. Nothing as yet has been definitely settled regarding the situation of the new warehouse.

The Canadian Fairbanks Co., Limited, expect to occupy their new Toronto premises on Front street, west of Yonge, early next week, and arrangements are now being made to transfer their offices and samples from their temporary offices on King street west, where they have been since the fire of last year. When the new building is occupied Hardware and Metal will give a description of the new premises.

After a long and painful illness, Mr. William Jessop, chairman of William Jessop & Sons, Limited, steel manufacturers, Sheffield, died on July 4, at the age of forty-eight. The deceased was the head of one of the most famous families in the whole metal world, and there are records of Jessops making steel in Sheffield as far back as 1774. Although chairman of one of the world's great steel industries, William Jessop never participated very actively in business life, and avoided public positions.

The hardware firm of Douglas & Prowse, Halifax, has dissolved partner-

ship. The members were Captain Douglas, Halifax, and W. H. Prowse, Murray Harbor. The former has resumed his position as traveler with Stairs, Sons & Morrow.

Mr. John Warren, of the sales department of Frothingham & Workman, Limited, Montreal, is spending his vacation at Port Louis, which is at the head of Lake St. Francis. Mr. Warren is spending an enjovable holiday trip which will end in a few days.

Mr. T. W. Mahon and wife, of Hintonburg, were visitors in Montreal this week. Mr. Mahon is a progressive hardware merchant in that town, and while in the city paid a visit to the office of Hardware and Metal. Mr. Mahon visited the paint trade of Montreal.

The hardware business carried on by J. R. MacPhail on Granville street, Vancouver, will be transferred by him to L. E. P. McAdam, late of Dunedin, New Zealand, on September 1. The business will be extended and enlarged and its capital increased. Mr. J. L. Johnson, an experienced hardware man, will be manager.

The injunction obtained by the Imperial Hardware Co., Toronto, against several of its directors, restraining them from taking possession of the company's property under a bill of sale for $1,500, has been continued. The company claimed that the bill of sale was merely security for a loan. The defendants are G. G. M. Davison, H. A. Coxall, and F. A. Hoar.

Mr. J. H. Ashdown left Winnipeg last week for the east on business in connection with the transportation commission. Accompanied by C. N. Bell he will inspect a number of Georgian Bay ports, and will later proceed to the Maritime Provinces. Sittings of the commission will be held at St. John, N.B.; Halifax, N.S.; Sydney, C.B., and Charlottetown, P.E.I.

Among the visitors to the Montreal paint and oil trade this week, were J. A. Paquin, St. Eustache, Que.; J. P. Brown, hardware merchant, St. Chrysostone, Que.; C. Leblanc, hardware merchant, Joliette, Que.; C. Thoret, hardware merchant, St. Timothy, Que.; E. T. Codere, hardware merchant, Sherbrooke, Que., and R. Logan, hardware merchant, Allan's Corners, Que.

Mr. G. J. S. Morison, of the Metallic Roofing Co., left for Winnipeg this week, to take charge of the company's new plant at that place. Mr. Morison has had ten years' experience in the firm's head office, at Toronto, and he is well qualified to undertake the duties of his new position. Before leaving for the west Mr. Morison was presented with a pair of gold cuff links by the Toronto office staff of the Metallic Roofing Co.

Mr. C. C. Ballantyne, of the Sherwin-Williams Co., of Montreal, returned from his trip to Great Britain with the Canadian Manufacturers' Association on Saturday morning, July 15. Mr. Ballantyne accompanied the touring association on their trip throughout the provinces, but owing to the necessity of returning to business he could not manage to take advantage of the invitation given by the Department of Trade and Commerce in Paris. Mr. Ballantyne reports having enjoyed himself thoroughly, and is high in his praise of the way each member of the association was received by the people across the water.

Profits that go to other tradesmen would come to you if you brought "Eastlake" Metallic Shingles to the attention of intending builders more aggressively. Why not get after these people?

The advantage of "Eastlake" Metallic Shingles over wood shingles is such a simple story of fact that prospective builders have but to listen to be convinced.

Their fireproof qualities, resistance to rust, storms and lightning, and their longer wear appeal direct to the pocketbook.

The free samples which we will gladly send you, make it very easy to get orders, when a prospective builder is once made to realize how much better "Eastlake" Metallic Shingles really are than wood shingles.

There's money in this trade.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto, Canada 304

We also manufacture:
"Metallic" Ceiling and Wall Plates
"Metallic" Cornices, Skylights and Ventilators

"Metallic" Siding (Stone, Brick, Etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetroughs and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 21, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

A VERY successful convention of the Retail Hardware Association is expected on Wednesday and Thursday of next week. Secretary McRobie has sent out notices to the trade inviting them to the convention, but as his mailing list may not be complete he wishes it to be understood that every retail hardware man in the West is welcome to the convention.

* * *

Winnipeg wholesale houses have no reason to complain of "midsummer dulness," and every establishment in town seems to be working at full pressure to turn out orders. The demand for building supplies is enormous—much larger than in any previous year. Next week the exhibition and the Retail Hardware Association's Convention will bring many retailers to the city, and increased activity may be expected in some lines. Prices throughout are steady.

* * *

Screen Wire Cloth—Price is steady at $1.55 per 100 square feet.

86 to 90 "	14.75
91 to 95 "	17.30
6 to 100 "	

COMMERCIAL TRAVELERS' TAX.

THE commercial travelers, that is that section acting for foreign houses having no place of business in the Province of Quebec, continue to wax wroth over the tax of $300 which the Province of Quebec has placed upon them.

The Dominion Commercial Travelers' Association have also taken the matter up and have been in correspondence with the Quebec Government on the subject. Mr. Wadsworth, the secretary of the association, when interviewed by a representative of Hardware and Metal, stated that, as yet, no direct action had been taken. A deputation appointed by the association had, however, interviewed the Government on March 30 of this year. Since then considerable correspondence has passed between the Government and the association.

Mr. Wadsworth went on to say that the association was not endeavoring to assist foreign travelers, but salesmen who, while they represented foreign firms, were members of the association, though residing outside the province.

HEATING CONTRACTS.

Desrosiers & Charette, St. Boniface, Man., have recently secured a contract to instal in the St. Norwood Catholic Church a system of Pease Economy heaters according to plans submitted by the Pease-Waldon Co., of Winnipeg. The system will be similar to that installed last season in the St. Pierre Church.

PAINT, OIL AND BRUSH TRADES

NEW USE FOR GLASS.

A PRACTICAL inventor and scientist, M. Garchey, known all over France, has made a very interesting experiment in Lyons. He has discovered an entirely new method of melting all kinds of old glass and transforming it into material as hard and serviceable as Belgian blocks. In 1898 he obtained permission from the municipal authorities of Lyons to pave a portion of one of their main streets with this new material, and thus prove to the world the value of his discovery. The street selected was a principal thoroughfare, which was under continuous and heavy traffic, and yet the glass is still as sound as when first put down.

M. Garchey claims for "ceramo-crystal," as he calls it, that it can be manufactured at a much more reasonable figure than any other reliable building material now on the market in Europe or America, and that it is practically indestructible. It is also highly attractive and artistic in appearance, and M. Garchey fully expects to see it taking the place of the building materials now in use.

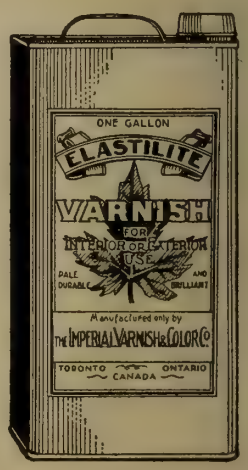
ABOUT LEAD POISONING.

THE lead poisoning of painters, which causes the dreadful condition of colic, weakness of the wrist muscles and paralysis, is now under discussion in the legislatures of Europe; whether to prohibit or not to prohibit the use of white lead paint, on account of its terrible effect on some painters. This leads to the question: Is there any pigment that could be used as a substitute for white lead? No! The question then arises: What causes some painters to be poisoned, while others are immune? Is it turpentine alone, as some painters assert? No! Carriage painters (of whom I am one myself) work in close varnishing rooms, where the air is saturated with the vapor of turpentine from the applied varnish and paint, and suffer nothing like lead poisoning. Neither do others who are exposed to the same fumes.

Is it due to turpentine evaporating from applied lead paint? No! Carriage painters apply white lead with some turpentine, and breathe the vapors from it while at work in closed rooms. They also, after the paint hardens, sandpaper the paint off and breathe the dust without being poisoned.

What, then, causes the white lead colic?

The durable form of white lead is partly basic, being a compound of the carbonate and the hydrate of lead, somewhat soluble in water, the hydrate constituent readily uniting with acids to form salts. This basic white lead in its union with oil (lead paint), and still more readily in its union with turpentine, is to some extent exhaled by evaporation into the air, its presence being readily recognized by the sense of smell, and affects painters generally who indulge in alcoholic drinks during working hours, or who from any other cause have a "sour stomach."



The action is as follows: When liquor is taken into the stomach it is warmed up to about 100 degrees F., and ferments to vinegar. The vinegar in the stomach, as well as the vapors thereof, carried by respiration into the lungs, unites chemically with the lead inhaled with the turpentine vapor, to form that deadly poison acetate (or "sugar") of lead. This passes in very minute quantities into the blood, which deposits the poison in various parts of the system, where it accumulates, to manifest itself finally by laming the muscles and producing painters' colic and local paralysis. During my experience of more than sixty years working with paint, I have observed that painters afflicted with lead colic were invariably drinkers of liquor during working time. This habit should not be indulged in, if one would escape that terrible calamity, lead poisoning, for which there is little or no remedy.—L. Matern, in Drugs, Oils and Paints.

MINERALS USED AS PIGMENTS.

There are a number of mineral substances that are mined and prepared primarily for use as pigment, says Joseph Hyde Pratt in Mineral Resources. These are the iron ores, hematite and limonite, which are ground and used in the manufacture of metallic paint, and which are not included under the production of iron ores; ocher, clay and other earths containing iron which are used for yellow and brown pigments, such as ocher; umber, sienna, etc.; barytes (or heavy spar) used for white pigment; slate or shale; and graphite. Other minerals that are directly used in the manufacture of paints are asbestos and soapstone, which have been utilized principally in the manufacture of fireproof paints and paste. Besides these minerals that are used in the natural state there are a number of other substances included under the head of mineral paints that are manufactured products, such as the various lead pigments, white lead, red lead, litharge and orange mineral.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, July 21, 1905.

SOME of the local wholesale dealers report a usual quietness of trade, which is natural at this time of year, while others maintain that the receipts of this month are just as large, and in some cases larger than those of previous months. The recent increase in the demand for Paris green is nothing short of wonderful, and already some of the leading manufacturers and dealers are reporting an absence of stocks. This is especially noticeable with the Canadian article, and should the present demand continue no doubt the situation will have a dark appearance to the home manufacturers.

The white lead situation still continues to have an unsettled appearance, and nothing definite can be formed regarding the future market. Some local dealers report that their customers are short of stock and are constantly forwarding orders for immediate shipment. No doubt stocks in some quarters are very short, as numerous inquiries have been received on the local market during the last few days inquiring at the delay in forwarding orders. Other wholesale dealers state that their customers are holding off until they see which way the market will move. At any rate no large orders are being booked, and it is estimated that every person is buying small amounts—from hand to mouth, as it were.

Turpentine has a somewhat better appearance, and though prices have been fluctuating during the week the outlook respecting the future market is much better. The handicap caused by the shortage of labor to reap the crop has been partly overcome, and the daily receipts in the South are much larger. Castor oil has been fluctuating considerably on the foreign market of late. The market has assumed a much easier appearance, and a decline has been the result.

Canadian Paris Green — Barrels, 17 1-4c.; arsenic kegs, 17c.; 50 and 100-lb. drums, 18c.; 25-lb. drums, 18 1-2c.; one pound packages, 19c.; half-pound packages, 21c.; one pound tins, 20c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Pure English Paris green, petroleum barrels, 15 1-4c.; arsenic kegs, 15 1-2c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16 1-2c.; one pound paper boxes, 17c., one pound tins, 18c.; one-half pound paper boxes, 19c.; one-half pound tins, 20c. Terms, 2 per cent. off thirty days, or ninety days net from date of shipment.

Turpentine—Single barrels 90c. per gallon; two to four barrels, 89c. per gallon. For smaller quantities than barrels, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Raw, one to four barrels, 51c.; five to nine barrels, 50c.; boiled, one to four barrels, 54c.; five to nine barrels, 53c. f.o.b. Montreal. Net 30 days.

Ground White Lead — Best brands Government standards, $5.50 to $5.70; No. 1, $5.25 to $5.45; No. 2, $5 to $5.20; No. 3, $4.75 1-2 to $4.95; No. 4, $4.50 to $4.70, all f.o.b. Montreal.

Dry White Lead—Barrels, $5.25; 100-lb. packages, $5.50; six or ten-lb. tins, $6.50.

Dry White Zinc—Pure dry in casks, 7c.; in 100 lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb kegs, 6 1-2c.

White Zinc (ground in oil)—Pure, 25 lb. iron, 7 1-2 to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—Pure linseed oil $1.75 to $1.85. Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish — Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil — 8 to 9c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—Trade continues quiet. No change is expected until before the close of navigation. Our quotations are as follows: American prime white 14 1-2c., American water white 16c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 21, 1905.

LOCAL dealers report the biggest business on record. The demand for Paris green continues very strong, and, if it keeps up at the present rate, some of the firms will soon have a shortage. Orders are abnormally large, and are rapidly diminishing the stocks. Paints are selling in great quantities, and the whole trade situation is most satisfactory. The usual "midsummer dullness" has not yet manifested itself.

The glass situation remains the same, and though little is being imported there is every expectation that orders will be met. The settlement of the great glass strike in Belgium will not relieve the Canadian market this season, as it will

THERE IS NO OTHER MIXED PAINT

on the market that will give beauty, durability and general satisfaction like

New Era House Paint

It will cover more surface, last longer, hold its color better than any other paint you can buy. Weather changes do not affect it. This is a good article to stock up. We have a Catalogue.

Painters in Canada use exclusively the painting material made by the

CANADA PAINT COMPANY

It comes as natural for a progressive hardware man to mail his Paint and Varnish orders to the Canada Paint Company, as we go to Church to Pray, to Bed for Sleep or to the Stream to Fish ! !

From start to finish the Canada Paint Company manufacture every item on their list. Colors, Varnishes and Paints suitable for every class of work. Do not look elsewhere for better paints. They are not to be found. The best paint is made by the Canada Paint Company by Canadian Workmen, Canadian Capital and for the Canadian Trade.

THE CANADA PAINT COMPANY LTD

take some months to catch up to orders already on hand.

Turpentine remains at last week's figures. An effort is being made in some quarters to stiffen the price, but for the most part the figures given below will hold.

The linseed oil situation makes it doubtful whether the Canadian makers will crush even this year, as there is still plenty of foreign oil offering, at a price which would give only a very small margin on domestic goods. Dealers who prefer the Canadian oil are closely watching the situation.

We quote prices:

White Lead—Ex Toronto, pure white \$5.50 to \$5.75; No. 1, \$5.12 1-2; No. 2, \$4.75; No. 3, \$4.37 1-2; No. 4, \$4.10 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, \$4.25.

Red Lead—Genuine in casks of 560 lbs., \$5.25; ditto, in kegs of 100 lbs., \$5.50; No. 1, in casks of 500 lbs., \$4.75 to \$5; ditto in kegs of 100 lbs., \$5.25.

White Zinc—Genuine French V. M., in casks, \$6.50 to \$7; Lehigh, in casks, \$6 to \$6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to \$1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, \$2.60 to \$2.80; white. \$2.65 to \$2.90 per barrel; No. 1 (orange), \$2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 54 to 56c.; boiled, 57 to 59c.; 5 to 9 barrels, raw, 55 to 56c.; boiled, 58c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrels, 87 to 90c.; 2 to 4 barrels, open; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. \$1.65 to \$1.75; pure linseed oil, \$2 to \$2.10; bulk in barrels, \$1.50; pure, \$1.95 to \$2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, \$2 per barrel.

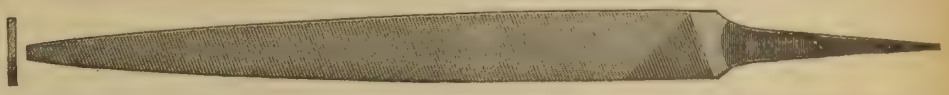
Refined Petroleum—As usual at this season, there is little activity. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass—See current quotations at the end of this issue.

WINDOW GLASS—MONTREAL.

It is now quite evident that the Belgians are far behind in filling orders, and anxiety on the part of the wholesale dealers is much more prevalent. Small amounts are arriving with each ship, but these are not always of the sizes which are most commonly required. In fact much that is being received is of the larger size, which, before it can be sold to the retail merchant, has to be cut and sold at a small loss to the wholesale dealer. Some of the pessimists are inclined to believe that the demand for this Fall will clean everything off the local market, but those who are viewing the situation from a practical standpoint fear no such result and maintain that receipts which will be much larger from now on will supply all that is required this Fall. Prices, although no change has taken place, are very firm. There is a strong tendency for the continuation of these strong conditions. Our quotations are: First break, 50 feet, $2; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 fe et,$4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.



SHORTAGE OF PARIS GREEN.

The last few days has shown an extraordinary demand for Paris green, especially in the district west of Belleville and down to the Maritime Provinces. This marked increase in the demand has resulted in one of the best known manufacturers of the Canadian article, the Canada Paint Co., of Montreal, stating that their stocks are practically exhausted. If any readers of Hardware and Metal have an excess of stock and are not desirous of carrying the same over until next season, the Canada Paint Co. will only be too happy to hear from those merchants so that they may be in a position to indirectly supply those merchants who are in need.

STOVES AND TINWARE.

THE CARE OF GAS STOVES.

IF the asbestos of stoves or fire-places becomes discolored or blackened from the gas smoking, as it frequently does, the thing to do is to sprinkle the feathery fiber with common table salt; then light the gas and let it burn the same as usual, says a recent issue of What to Eat. The sooty appearance of the asbestos departs like magic and the mineral soon resumes its natural whiteness again. It happens, too, that the tiny apertures through which the gas flows become gummed and partially filled in; when such is the case run a hat pin through the holes, or a round toothpick, and it will readily free them.

It is important also to give particular attention to the gas range if the best results are to be obtained, and this is especially true where it is in constant service for cooking. Things inclined to boil over quickly, like milk or coffee, should be watched to prevent it happening, as they clog the burners and corrode the iron and zinc linings, causing them to rust and get a stained, unsightly appearance. About once or twice a week, according to the use of the range, the burners should be lifted out, turned upside down, and lightly tapped to knock out any dust or soot that might have lodged in the circular aperture that supplies the flame. A hat pin is good for picking out any particles that resist tapping. When not using keep the lids on the stove.

A NEW SAFETY KETTLE.

Mr. A. Ellinger, of Harrogate, Eng., has produced a novelty in the shape of the safety kettle. In this invention the lid is mounted on a high dome on one side of the kettle. The inventor's idea is that with this construction there is no danger of scalding the hand with the steam escaping from the lid. Moreover, the kettle can be more easily filled, either when it is on or off the stove. It is impossible also for water to run out of the top of the kettle when it is tilted over to pour from the spout. The lid cannot fall on the back of the hand when using the kettle, nor will the kettle boil over.

ITEMS OF INTEREST.

CONTRACTS have been secured by the James Smart Mfg. Co., Brockville, to heat and ventilate the Y.M.C.A. Building at Brantford and the high and public schools at Aurora. Five Kelsey generators will be used on the latter job.

Belleville will expend $15,000 in extending its gas plant.

Are you pushing stove polish? It's a good line at any season of the year.

Many dealers are making a success of selling stoves on monthly payments. Monthly calls keep them acquainted with their customers.

Frank expects to have an electric light plant shortly, as the Canadian Metal Co. are canvassing the town and find that 2,000 16 c.p. lights will be required to supply the wants of the citizens.

The contract for heating and ventilating the new Separate School at Wallaceburg has been given to the James Smart Mfg. Co., Limited, Brockville, manufacturers of Kelsey warm air generators.

Put out a sign, "Old Stoves Taken in Exchange," and pay enough for the old stove to induce the customer to buy from you. Then fix up the old stove and sell it for what you can get for it. You should get a profit on both transactions.

Every stove salesman should know the line he sells from top to bottom and be able to advise the best fuel to secure the most favorable results. Not a bolt or nut, door or damper, should exist without his being able to explain what it is there for. Such knowledge impresses a customer favorably. Have you the knowledge?

When you get anything really new in the way of a stove, let the people know. Be enthusiastic about it and you will soon communicate your enthusiasm to others. Many people that have not kept pace with the improvements in stove-making the past few years do not know what a difference there is between the stove of to-day and that of ten years ago. Show them.

A feature of the trade this year is the early orders for repairs, it being evident that local dealers are learning to urge their patrons to bring in their stove and furnace repair work during the Summer, so that they can be done satisfactorily before the Fall rush. This is a good thing as it not only assures the owner of the stove that it will be ready when it is needed, but gives the repair man much more time to order the parts needed or make the changes.

Any dealer that expects to sell furnaces should familiarize himself more or less with the principles of heating. He should be able to tell what kind of a furnace is best suited to each sort of a building, whether it should be hot air, hot water, steam or a combination. He need not be an expert in the matter, but he can easily have enough knowledge to talk to the owner of the building intelligently on how to heat it. After he has decided what system is best some good reliable manufacturer will furnish him the plant all ready to install if the specifications are sent in.

Many stove men do not like to do a second-hand business, as they think it hurts the trade in new goods, says the Hardware Trade. It will not if properly managed. The second-hand stoves can be sold to people wanting stoves only for a short time, to those wanting stoves for Summer cottages or for camping out, to people who will not buy new stoves. If anyone wants a new stove and comes in to look at one, he is not likely to switch off and buy an old one. The merchant can make good money by taking the old stoves in exchange, fixing them up and selling at the best price possible. Of course, too much must not be allowed for them in trade.

THE JAMES MORRISON BRASS MFG. CO., LIMITED, TORONTO

HEATING AND PLUMBING

PAST AND PRESENT PLUMBING.

Extract from a paper read before the Toronto Master Plumbers' Association by Mr. George Clapperton.

THE Chinese long before the Christian era used lead and soldered lead and other materials together. To think that the Chinese were the pioneers of our trade may not be pleasant to many of us, but it nevertheless is true. But the Chinese were not the only ones which used lead about this time, for we find Archimedes, a Greek philosopher, who lived 200 years before the Christian era, used lead pipe.

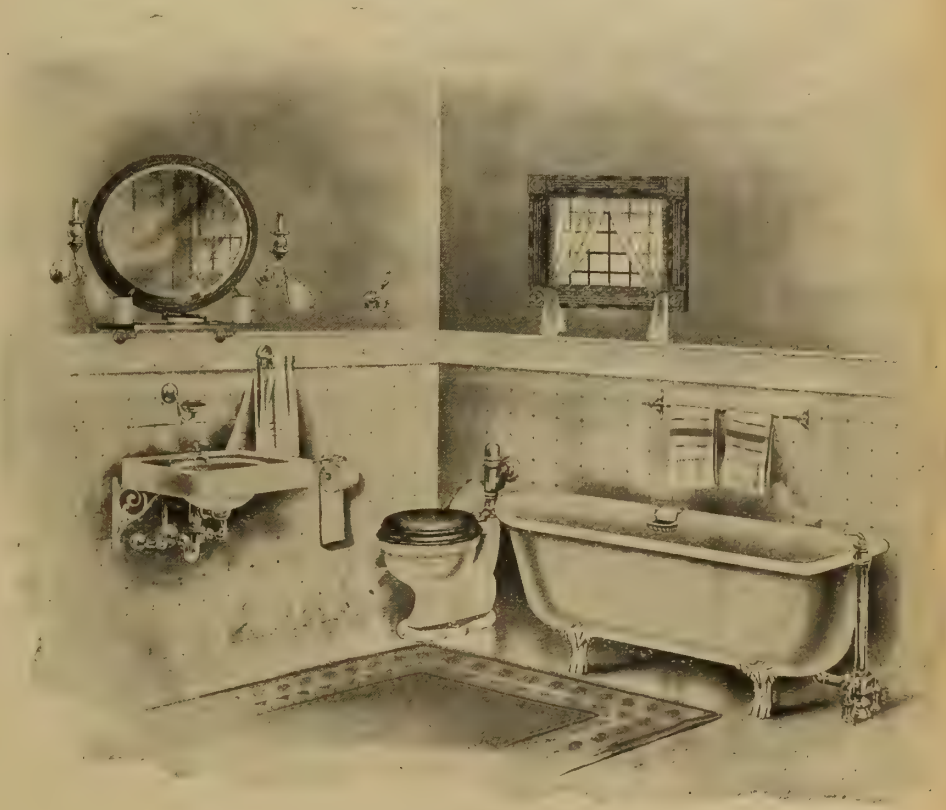
We find it stated in the Bible that lead is a lasting metal for letters, and that David used leaden pipes; that in the ancient cities of Asia, Egypt, Greece and Syria lead pipes were used. Taking Archimedes for the first plumber, we are 2103 years old; quite a respectable age. While this may seem a long time it would fade into insignificance when we compare it with the Chinese, who used lead nearly 5000 years ago.

History tells us that there was such a man as a lead worker, but does not tell us that he had a helper who was to be an apprentice to the trade, so that we will consider his helper as a laborer or handy man. The explanation, no doubt, will account for a lot of the lost art, if I may call it such, for none of us would care to dispute the fact that the ancients knew secrets about which we know nothing. To thoroughly understand this one has only to turn up some of the old masters and see what wonderful wisdom and skill the ancient plumber displayed in the use of metals and hydraulics.

Sheet Lead.

As we have no records of pipe being drawn by the ancients, it will be fair to assume that they first cast their lead into sheets and then formed them into pipe, burning or soldering the seams. This must have been the style of pipe used by Archimedes; besides, we read of lead being used as leaves for books. The Westminster Abbey and St. Paul's Cathedral have cast sheets of lead for roofs. The former was built in the thirteenth century. King's College, Cambridge, built in the fifteenth century, has cast sheets for a flooring between ceiling and roof.

The first records we have of sheet lead being rolled was in the year 1670, when a patent was issued to Howard & Watson, and known as an engine and rollers for drawing lead into sheets. This machine did its work with cold rollers. Afterwards, in 1804, Dodds patented a machine which worked with hot rollers. Burr followed him, using rollers heated by hot water. Since this time lead has been rolled in a very similar way and I am told is rolled in much the same way to the present day, only substituting steam for hot water. Rolled sheet lead was first used for sheathing ships.



Lead Soil Pipes.

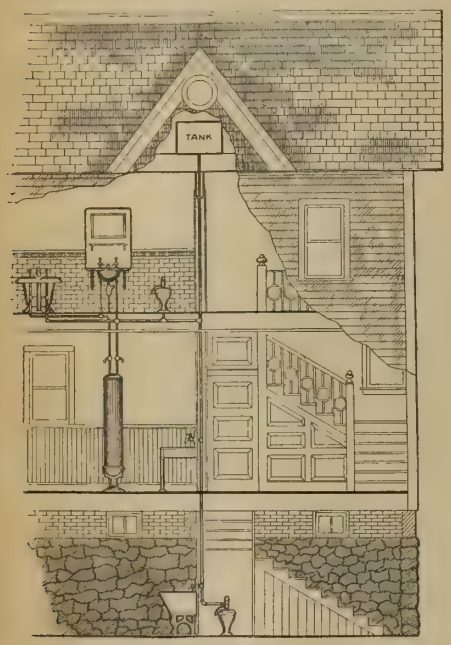
This kind of soil pipe has been used in the eastern cities, especially in Rome, almost from the earliest recorded time. They were used in France long before they became known in England. Sir John Harrington was the great advocate of lead soil pipes in England, and he lived during the reign of Queen Elizabeth, which was from 1558 to 1603. A. D. So his advocacy must have been prior to 1603, or 300 years ago; but lead soil pipes must have been used long before this, as we find one Robert Brocke obtained an English patent for casting lead soil pipe in the year 1539. These were made in short lengths of 18 inches and 3 feet long, slightly tapered, and then joined together by burning. By this means they had a pipe resembling our present pipe, but not as good.

After this they cast the lead pipe very thick, and then drew it through a die. This enables them to make it any required thickness. This way came into use about 1800. I have no doubt but Brocke copied this idea from Braham's patent, for he invented a machine for pressing a pipe through a die, thereby getting a pipe which very much resembles the drawn pipe of to-day. His machine was worked by hand and he worked or used the lead while it was in its molten state. In 1820, or about 20 years after Braham's patent, we find a man by the name of Burr patented an improvement on Braham's machine by applying the hydraulic press to it, thus enabling him to do his work easier. He worked his lead while it was hot, but in a solid state.

Then came Hague, who patented a press, one driven by a powerful screw and compound cog wheel. Since these there appear to have been no improvements of note for making drawn pipe, for the machine of to-day appears to be worked similarly to Burr's machine.

While these machines appear to have been doing good work, it took a number of years to displace the old soil pipe made from sheet lead and seamed lengthwise, but the start having been made, nothing appears to have impeded the steady progress and we passed from hand made pipe to machine pressed pipe, then to cast iron, copper and, now, wrought iron soil pipes, which brings us up to the present day with soil pipe.

"Walrous" Perfection Bathroom.



Solder.

Next let us see about the metal used to mix solder—namely, tin. This metal is contained in nearly everything the plumber has to do with. Here we can go a long way further back than we did with sheet lead, for we find that the Chinese have records of its use as far back as 2200 B.C., which is nearly 5000 years ago. Besides, we know the Egyptians used it. In Malacca tin was found in very remote ages; also soldering lead pipes is mentioned by Vitruvius.

The ancient plumber not only knew

how to do his work, but, unlike the plumber of to-day, took advantage in soldering of the capillary action of the solder, for we read that their soldering was so neat that it could not be seen. They were in the habit of tapping the lead and letting the solder sweat underneath, more especially in cistern work, where the water was liable to eat away the tin, as they called it, in some isolated cases. This way is still used for chemical work.

Solder is one of the materials which has changed but little during the last 5000 years, and before passing away from it it is but fair to say that the ancient plumber not only mixed tin and lead together to form his solder, but it often contained lead, tin, bismuth, mercury and cadmium. By adding or combining the first four of these together in proper proportions the combined metals will melt with 122 degrees of heat, or only 22 degrees more than your blood heat, or 90 degrees less than would boil water. When you consider the finest solder we use—that is, half and half—re-

Installation in Private Residence.

quires 370 degrees of heat to melt, you will not wonder how the ancients did such fine work.

The Earliest Trap.

Let us look back to the all important article—namely, the trap. We find that the earliest trap which has been located was taken out of the Lothbury Old Church, built by the famous architect, Sir Christopher Wren. This trap bears the date of 1678 A.D., 225 years ago. It was for a water closet and made of a "four-square" shape, of the style commonly called "D" traps. While this would not be copied by our modern plumber, still this one was well made, and by means unknown to the writer the bottom was increased over one-half in thickness, which is more than could be said of all the hand-made traps of more recent date.

Some of you no doubt will be skeptical about this date, but when you remember that sheet lead was rolled in 1670, or eight years before this trap was made, it will no doubt remove that doubt. But the ancients did not call everything placed under a fixture by the word "trap." They called our present "S" trap a siphon and used it for siphon purposes only. As far as I can find out a trap was used first to keep back gases in chemical work, so they have not changed their use in all these years as far as keeping back gases is concerned.

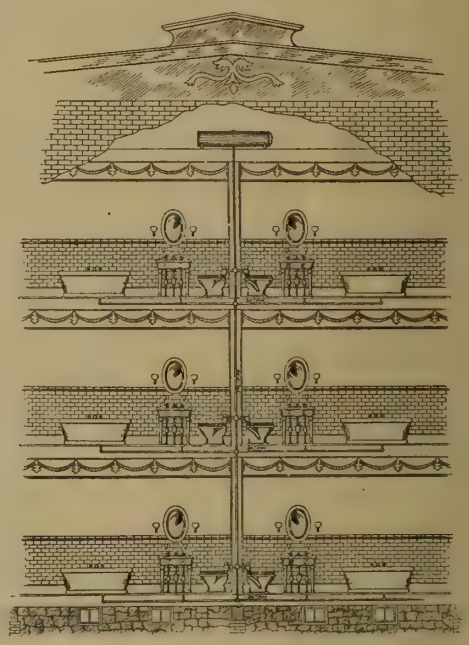
AIR-CLEANING SYSTEM.

An apparatus has been installed in an office building, recently erected in Pittsburgh, whereby, in connection with the heating and ventilating plant, the air is washed and all dust and soot removed before it is put into circulation. In ordinary heating and ventilating systems, a fan is usually employed to draw in the outside air. This air, after being warmed by a steam coil or other heater, is then circulated throughout the building. In a laboratory at Washington the air is first filtered through a fine cloth, but in the Pittsburgh building, the washing device consists of a metal supporting frame, filled with broken coke, over which the water trickles. As the air is passed through the coke, the water washes out the small particles of coal, soot and dust, carrying them to the bottom of the apparatus, where it is possible to remove them from time to time. A constant supply of air for the building is obtained through the ventilating flues, owing to a small pressure which produces a leakage outward. The plant has proved most successful.

DESIGNING OF FIXTURES.

In no line of useful wares entering into the furnishing and decorating of a house or building of any kind has greater or more rapid strides been made than in the designing and making of fixtures for gas and electric illumination.

It is not many years since the introduction of quality, appropriateness of design and finish, rather than bulk or massiveness, became a feature of fixtures for illumination, and there has been a steady advance and development, so that to-day the gas and electric fixtures are as correct features in appropriateness and harmony of design as are the other interior fittings and furnishings.



Not only the fixtures must possess these truly artistic features and excellence of design and finish; but even in glassware accessories that are used with them, such as the globes, shades and imitation candles, must also possess the high qualities of harmonious design as do the fixtures on which they are to be used.

But a few years ago the highest example of a globe for a gas fixture, no matter what design it was an example of or how costly, was that known among dealers as a "Cut Crown," this being the highest type of a gas globe at that time. What a changed condition (and for the better) exists at the present time. Now the glassware used with lighting fixtures must possess character and appropriateness both as to the shape of the globe itself as well as the decoration placed upon it, and be in harmony with the fixtures—just as the fixtures must partake of the architectural and decorative features of the interior where they are to be placed and used.

American manufacturers engaged in these two lines can well feel a pride in their achievement, and the high class of goods produced by them; and also be congratulated for their continued effort in the application of real art (a much abused word) to their productions; thus keeping in close touch with and catering to the rapidly growing taste for and development of all that is "true art," as applied to the articles they manufacture—true allies of other lines devoted to the furnishing and decoration of interiors—each of which, in its line, makes possible "The House Beautiful."

WATROUS FIXTURES.

ILLUSTRATIONS showing suggested methods of installing fixtures in private residences and in apartment houses are given this week, together with a view of a "Watrous" Perfection Bathroom, manufactured by the Watrous Co., Chicago, Ill. The strong feature of this company's water closets is the aquameter, which is an automatic,

Installation in Apartment Building.

slow-closing valve for flushing and, as its name implies, is a water measure.

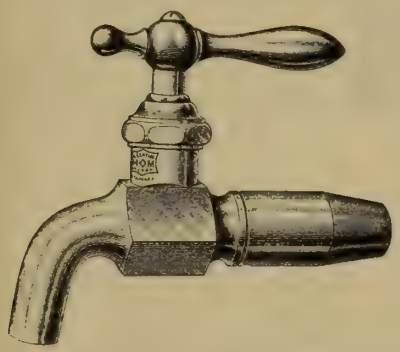
In construction the aquameter is based on entirely new principles, which are illustrated and described in a neat booklet which will be sent on request to any reader who mentions this paper. It can be attached direct to service pipe from the city main or storage tank and works equally well under high or low pressure. Owing to its construction it is largely used on cars and steamships, but it is also adapted for use in residences, office and public buildings.

The illustration showing the installation in a residence is suitable for a supply from the city main or from a service tank. Direct pressure connection is recommended for new work, or in old buildings where the supply pipe from the main is large enough to discharge sufficient water to flush a closet direct, in which case the tank and piping above the highest closet will be dispensed with.

In apartment buildings or flats a storage tank is recommended where the supply from the street main is not large enough to flush a closet direct, and is also very desirable in high-pressure

TRADE PENBERTHY MARK.

A QUARTER OF A CENTURY ON THE MARKET.



AUTOMATIC INJECTOR

Penberthy Injectors have enjoyed the confidence of the public for the past twenty years; due to the fact that they have been found to do all that is claimed for by the manufacturers. Every dealer handling these goods feels that he has something strictly reliable.

MUELLER FULLER WORK

STANDARD GRADE BIBB

Fuller balls last longer in some bibbs than others because the seat is better shaped and there isn't the tendency to drag and become rough.

The seat in Mueller Fuller Bibbs is so shaped that when the ball is drawn up it slides over an evenly bevelled surface until it comes to the full stop. It goes into the seat without friction or unnecessary wear.

Mueller Fuller Bibbs are made in plain and hose patterns and with tail pieces for all styles of type connection. The bibb illustrated is the plain pattern with lead pipe tail piece.

Each bibb bears the Mueller trade mark and is *unconditionally guaranteed.*

H. MUELLER MFG. CO.

Decatur, Ill., U.S.A. *New York, N.Y., U.S.A.*

Good Goods Create Good Trade

This is so well established a fact that none will attempt to gainsay it.

The tradesman who adheres resolutely to the policy of handling the best of everything, soon finds out that he has gained an enviable reputation and that the same is bringing business to his doors.

This is why we so persistently advise you to adopt

The NATURO CLOSET

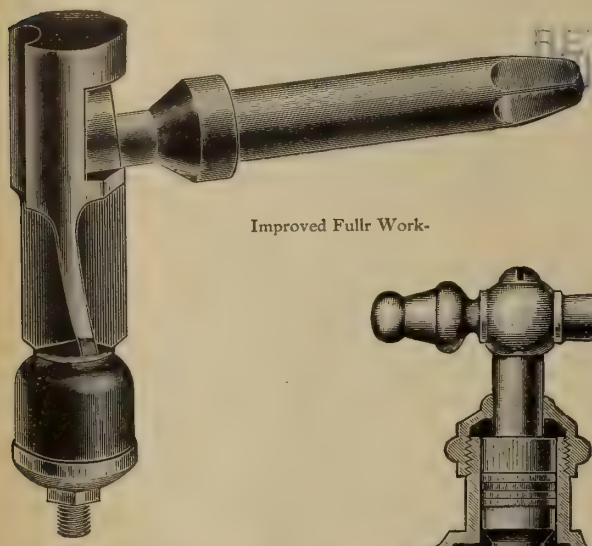
in your business. Perhaps you are doing a fair amount of business? What of it? Don't you want to do more?

There is no closet sold to-day that can compare with the NATURO for convenience, cleanliness and general sanitariness. It alone will tend to keep the users in good physical condition. No other closet has so "selling" a feature.

Let us send you our illustrated Catalogue. You'll see for yourself why it is the very best.

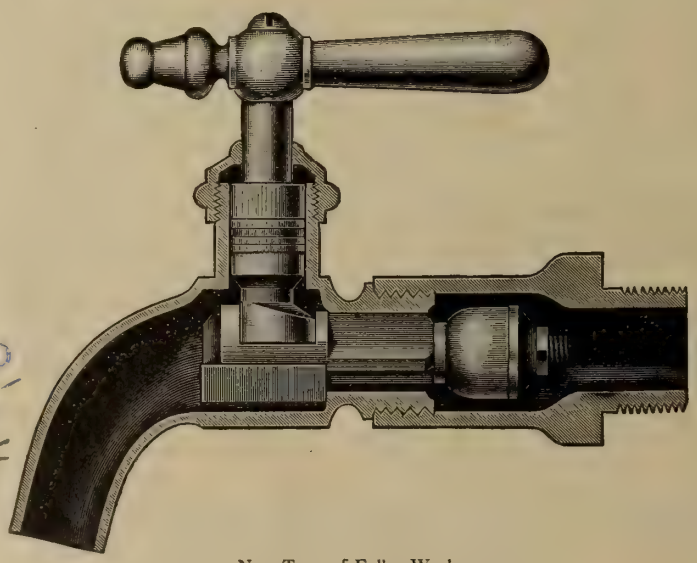
THE NATURO COMPANY

C. H. MUCKENHIRN, President.



Salem, N.J.

towns; all the fixtures being supplied from this tank, the pressure is reduced and repairs incident to high-pressure connection avoided. The certainty of always having a supply of water on hand during the temporary shutting off of the usual street suply is also an important consideration.



OBJECTIONS TO FULLER WORK OVERCOME.

The cuts below furnish a dissected view of a new line of Fuller work presented by the United Brass Mfg. Co., of Cleveland. Owing to the many annoyances the trade has had with Fuller work, the new line will be welcomed.

Having a heavy, solid eccentric made of hard metal, an easier action is assured, which in turn minimizes the friction and distributes what friction remains over a large surface, thus making

Improved Fullr Work-

New Type of Fuller Work.

RETURNED AUG 2 1905 To Owner Cut Book 38 Page 54

itself less felt. The stem and ball travel in a grove, which accurately guides it to a direct centre, thereby overcoming all hammering and rattling. By virtue of this absolutely accurate action, the use of a hard hot water ball is permitted, thus overcoming swelling and the many tedious jobs of packing.

The absence of a trap in the bibb assures the perfect drainage of all water, and in this manner eliminates the odious breakage of eccentric caused by the contents of bibb trap freezing. The pressure of water against eccentric is uniform at all stages of use, which prevents self closing. Basin cocks also contain these workings.

Traveling representatives of the above firm report having turned many compression towns into Fuller, which is most logical, as all plumbers prefer the simplicity of Fuller action, and doubtless would have adopted same long ago, had it not been for the many trying annoyances hereby overcome. This firm will be glad to furnish catalogue and discounts on request if Hardware and Metal is mentioned as the paper in which the offer was made.

COOKING BY ELECTRICITY.

THERE is, perhaps, no better illustration of the great flexibility of the electric current for commercial and domestic purposes than its use after it has been transformed into heat. The numerous advantages of electrically equipped heating and cooking apparatus, such as the riddance of smoke and soot, no vitiation of the atmosphere, instant heat at the exact place where it is wanted, no fuel or large cooking range, no labor in making or maintaining the fire, no waste of heat, perfect regulation of temperature, no danger from fires or explosions, cleanliness, have all been recognized by those interested in the introduction of electricity into home and workshop for a number of years, but well-grounded causes are responsible for the somewhat limited but nevertheless growing use of electrically equipped cooking and heating apparatus.

Primarily, the rate charged for current has been almost prohibitive, but it is being constantly reduced on account of the improvements in general machinery, the extension of the central station system of distribution, the increase in the number of water power and isolated plants and because central station managers are beginning to realize the fact that electric heating apparatus are current consumers during those hours of the day when their station load is light.

The householder also has become accustomed and attached to things electrical and is more willing to supplant his gas stove by an electric stove or electrically heated pot, similarly to his willingness some years past to substitute the gas stove for the coal range. To do the requisite work with such utensils, excepting, perhaps, the iron, current costing in most cases less than one cent is consumed.

In the "Prometheus" system no wires are used. The heating device itself consists of a strip of mica on which a layer of metal has been deposited, or, more properly speaking, fired. This conducting strip is protected by another piece of mica, and the whole is enclosed in a metallic casing. This unit of "heating

Complete Electric Kitchen Equipment.

element" can be painted to any desired resistance. The paint is an alloy composed of non-oxidizable metals, ensuring the element's life. The element may be either straight or circular according to its usage, and may be inserted into or removed from a piece of apparatus with the greatest ease by an unskilled person in case of a breakdown; an advantage heretofore denied by any other known method.

The utensils themselves are equipped with the heater, thus dispensing with a stove, which means not alone the purchase of one piece of apparatus, say, a pot or chafing-dish, instead of a pot or chafing-dish and stove on which to place it, and by actual test it has been shown that eighty-seven per cent. of the heat sent into a utensil is utilized therein for the heating of the food. This may be illustrated by the fact that a pot in which water is boiling may be held in the palm of the hand, showing that the heat does not escape, but is retained in the pot, the only place where it is wanted. This in turn means not alone a saving of time, for the greater heat ensures quicker action, but if a gain is no object, less current is required to do the same work as that done by any other method in which a stove is used. The latter, as is well known, is a very inefficient piece of apparatus, which only transmits about thirty per cent. of the heat generated in it to the food in the cooking utensils. The remainder of it escapes into the surrounding atmosphere, goes up the chimney and heats up the stove itself and the air space between it and the utensils.

The system was first developed in Europe, and has been in exclusive and successful use in Germany for ten years. In Austria, the well-known Siemens & Halske Co. have introduced the system, and in Switzerland, England and France it is extensively used for domestic and commercial purposes, being exploited by separate corporations in each country. In the United States, the Prometheus Electric Co., 41 Cortlandt street, New York, has developed during the past three years a line of apparatus suitable for this market, and a number of these are shown by the accompanying illustration.

Plumbing Markets

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 24, 1905.

GENERAL quietness of other markets has not as yet affected the plumbing trade. In fact, the demand continues to be as active as ever. Possibly there may be a small decrease in the local demand, owing to the carpenters' strike, but the increase in the demand throughout the provinces more than balances the whole demand to the good. Iron pipe fittings are much firmer, and an advance may take place shortly. American manufacturers have supplied the local dealers with these fittings at a very low figure, but as the trade in that country is much better this year they find selling at the old prices. Canadian Rolling Mills are keping up well with the demand for iron pipe. All the local supply houses report that they have a good supply on hand.

The demand originating from all parts of the lower provinces for all manner of goods is remarkable, and it is easily seen that the amount of business transacted this year will surpass anything accomplished in former years.

Range Boilers—Demand continues to be steady. Prices continue unchanged. Our quotations are as follows: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The recent advance in pig lead will probably have some material effect upon the price of lead pipe if the demand continues to be as strong as it is at present. Demand is active and conditions very firm. Our quotations are as follows: Discount 30 and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—There is some talk of American manufacturers advancing the price. If this takes place it will mean an advance on this market. Prices are firm. Our quotations are as follows: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—The demand remains as active as ever, and local jobbers are finding it somewhat difficult to fill all orders on time. Not that the pipe is scarce, but the sudden increase in the demand has taken them unawares, and as a result they have not prepared themselves to meet these conditions. The demand is general, originating from the country as well as from the cities and towns. Prices are firm, but no advance is anticipated. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 1-2 per cent.; 3-8 inch, 62 1-2 per cent.; 1-2 inch, 72 1-2 per cent.; 3-4 inch, and upwards, 74 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—In active demand, and steady prices are the most notable features on this market. Our quotations are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, July 21, 1905.

PRICES generally in the plumbing trade have had no fluctuations during the past week. Business, however, has ben most satisfactory, and the brisk demand gives promise of a better July than last year. Orders coming in indicate that building operations now under way are approaching completion, and the finishing is now being done by the plumbers. Many old residences are having their plumbing renovated, and are installing modern sanitation. Lead pipe is in brisk demand, while business in soil pipe and fittings is so strong that the foundries are short on car lots, though able to ship small orders. There is also a good demand for iron pipe, but the supply is quite equal to it, and no shortage is expected.

Lead Pipe—Demand is brisk, and large orders are being filled by all the jobbers. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—The orders for these goods are so large that foundries are finding difficulty in shipping car-lot orders from the west. Prices are unchanged. We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Though the demand is brisk, the supply is quite adequate, and all orders will be filled. Our quotations are as follows: Cast iron elbows tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—No fluctuation in price is reported. The discount of 15 per cent. continues.

Galvanized Iron Range Boilers—Business is quite satisfactory, with prices stationary. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Sales continue heavy, but are being met by a good supply in all quarters. Our quotations are as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—A good demand is reported at last week's price. We quote: Bar solder, half and half, guaranteed, 18c.; wiping solder at 16 1-2 to 17c., and refined 17c.

Enameled Ware—Large sales are being made. It is said that many old buildings are adopting newer methods in plumbing, thus creating an active demand for these goods. Our quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50, special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

BUFFING ROOM PRACTICE.

THE buffing room in the brass department at the new Angus shops of the Canadian Pacific Railway, Montreal, presents an interesting illustration of recent advance in the removal of dust from buffing and grinding wheels. Here a Sturtevant exhaust fan with a special form of Sturtevant hood enclosing the wheels insures the withdrawal af all of the dust and fine chips. This system maintains a perfectly clear atmosphere within the room, separates the chips from the dust and prevents the discharge to the outer atmosphere of dust-laden air with the attendant disagreeable results.

RAMSAYS BARN PAINTS

Make money in Barn Paints. Put it to your farmers. Put it strongly; it will mean money and friendship for you.

Ramsays Outside Paints, or Barn Paints, protects the barn, gives it a touch of color, and at little cost. Don't talk house paints for the barn. It will lose you the order. Talk Ramsays Barn Paints, at 10c. a gal. It will bring orders and profit.

Brazing (very soft)	1	2	—	—	—	350°

ITEMS OF INTEREST.

It is said that there are at the present time 330 towns lit by acetylene, of which 121 are in the United States, 80 in France, and 54 in Germany.

In the Kingdom of Hungary there are four villages provided with complete acetylene installations, while the number of private plants is estimated at over 3,000.

Harvesting by electric light has been introduced into Australia, we are told. The companies have been harvesting over here for a good many years!

A Brussels paper announces that the General Electric Co., of New York, has amalgamated with a Japanese lamp manufacturing firm to form a new company with headquarters in Tokio for the manufacture of electric lamps. The company employs about 20,000 hands in America, and does a large business in Japan, China, and the Philippines.

The large number of applicants refused plumbing licenses in New York City is shown by the president of the examining board of plumbers in his report to the mayor, in which he states that during the quarter ending March 31st, 1905, out of 122 applicants examined 29 were granted certificates, 47 were rejected and 46 had the results of their examination pending.

There are many more bathroom fixtures than there were a few years ago, little useful things are constantly being added to this line. There are towel racks of various kinds, sponge holders, tooth brush holders, tumbler holders, soap holders, bath tub seats, mats for putting in the tub to prevent slipping, shower baths to be attached to the faucet, soiled towel holders, etc., etc. These are the little things in which there is a good profit.

AUGUST 3 THE DATE.

Buffalo plumbers are to pay a return visit to the fraternity in Toronto on Thursday, Aug. 3. The place has not been chosen as yet, but Toronto ball grounds are being considered, as a game of ball and other sports are on the bill of fare. A jolly time is looked for.

PLUMBING GOSSIP.

Good progress is being made in the renovating of the plumbing showrooms of Amiot, Lecours and Larioiere, at No. 520 Craig street, Montreal. All partitions have been torn down and the building has been extended some forty feet to the rear. The showroom is being decorated in pretty colors, and when everything is placed in order it is expected that it will be one of the nicest

IDEAL Woven Wire Fencing

MAKES MONEY FOR YOU

Your customer, the farmer, wants a fence that can be put up quickly and easily just when he wants it. Hand made fences cost too much when you figure the time it takes to build them, to say nothing of the hard work.

Why not sell "The Ideal," the best woven wire fence made? You can build up a permanent trade that will pay you as much as any line you are handling. Other hardware merchants are doing it. Why not you? The Ideal will give satisfaction to your customer and make him your friend.

Have you seen the Ideal? Let us send you a sample and catalogue showing why Ideal fence made from No. 9 hard steel wire throughout is the strongest and the best value.

Ask us about the Ideal all metal farm gate.

showrooms of its kind in Eastern Canada. Much work, however, is yet to be accomplished before everything will be in shape to admit the public, and probably the first of August will have passed before this company has realized its ideas respecting a model plumbing showroon.

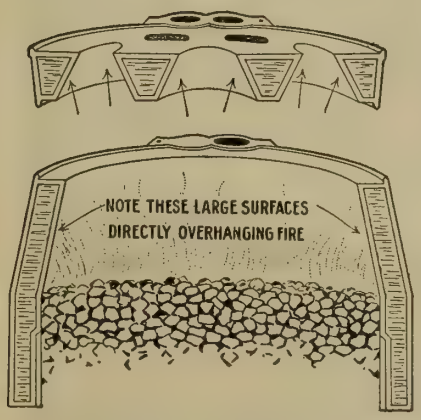
* * *

Mr. R. J. Cluff, Toronto, visited Hamilton on Thursday.

* * *

Toronto master plumbers enjoyed themselves at Lorne Park on Friday.

* * *



The new water curtain for protection from fire, which has been installed by Gurth & Co., of Craig street, Montreal, was tested this week and found to be satisfactory.

* * *

The recent strike of the carpenters' union has proved detrimental to the master plumbers of Montreal. Those who have large contracts for outside work are suffering, especially from the inactivity in the building trade. Although the contractors are pushing ahead and are obtaining men, yet the number of men employed now is not as large as the number employed before the strike began. Hence, under these conditions, the buildings are not progressing as rapidly, and therefore the master plumber is kept waiting until the buildings advance to such a stage, allowing the plumber to instal the pipe, baths, and other articles necessary for the comforts and sanitation of the future inmates of the building.

Heat in a boiler must be quickly transmitted to the water or it gets away altogether—goes up the chimney.

The Oxford Boiler lets very little heat get away. Slanting firepot walls over the fire and

bell-shaped flues in the large lower water section retard the heat as it impinges on them in its upward rush, transmit it to the water within and utilize it more fully than any other boiler made. Steel Push Nipples make metal to metal joints that never leak and our hollow grate bar assures perfect combustion and easy separation of dead ashes from live coals.

The Oxford Boiler is the perfection of household heating apparatus. Your trade wants the best. ***Send for Catalogue.***

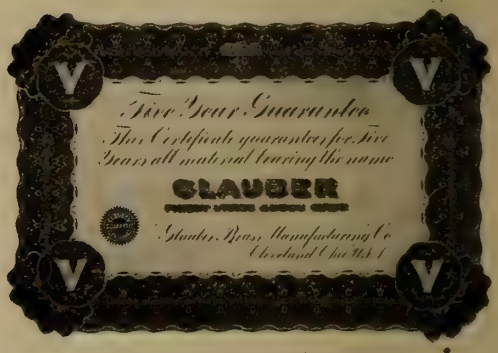
FINE PIECE OF WORK.

JOHN ROUND & SON, LIMITED, of the Tudor Works, Sheffield, have had on exhibition at their London showrooms a beautiful and unique silver trophy recently designed and executed to the order of Muratti, Sons & Co., Limited, of Manchester and London, who offer same for competition amongst the Motor Cycle Unions of Ireland. The artist responsible for the design and modelling is Mr. R. Strachan Douglas, and a glance at the photograph, which we produce herewith, shows that the idea represented is a winged figure of victory seated on a motor cycle. With one hand she steers and controls the machine, while with the other she holds forth the laurel wreath to the victor. The figure is modelled with fine artistic and aerial feeling, and a very happy touch is given by the happy features of the female motorist. The technical construction of the machine is ideal, for it is a correct model in every detail. It demanded the most cunning silversmithing in its production. A splendid impression of speed is given by the rolling cloud of dust and the fluttering ribbon on the laurel wreath. The silver part of the trophy rests on a well proportioned and tastefully moulded abony plinth with winged shields around it for the names of the winners. On the obverse of the plinth is a very well executed panel in raised lettering bearing the words "The Muratti Trophy." The whole thing stands 36 inches high, weighs 375 ounces, and is valued at about £200 sterling. It has taken over three months to complete the trophy. The intention of the donors to make this the finest motor trophy in Great Britain is now an accomplished fact, and it certainly reflects the greatest credit on the manufacturers and all concerned in its production.



"A Fine Piece of Work."

While on view the trophy was surrounded with many other choice objects in sterling silver and electro-plate. The house of John Round & Son dates back to 1847, and many of their designs are of the old Georgian and early Victorian period, now so much in favor amongst those who appreciate that simplicity and dignity of design which characterizes the old pieces of Sheffield plate that are now becoming scarce. All the work in connection with the production of their many different lines is done by their own workmen from the manufacture of the metal to the finished article. The working and polishing of ebony, and the designing and carving of ivory handles for carvers, dessert knives, etc., might almost be regarded as a business in itself.

A VALUABLE GUARANTEE.

The half-tone cut herewith illustrated is a copy of a most beautiful and attractive lithographed certificate of a five-year guarantee of their goods, which is being sent out by the Glauber Brass Mfg. Co., Cleveland, Ohio. It is quite a novelty to so strongly indemnify purchasers and users of their goods against any defects for five years, and shows the greatest and utmost moral confidence the Glauber Co. must have in their product. Master plumbers who have had trouble and constant annoyance with defective brass goods should look upon this five-year guarantee as an end to the constant perplexing and distressing annoyance given them by defective brass goods. A five-year unreserved guarantee should strongly appeal to the public, and all master plumbers will do well to write Glauber Brass Manufacturing Co. for further data and particulars, mentioning Hardware and Metal.

Glauber's Five Year Guarantee.

BOOK REVIEWS.

"**The Modern Ironmonger.**"—A guide to the management of the business of a Twentieth Century hardware dealer, being the second of the Ironmonger series of handbooks, published by the Ironmonger, 42 Cannon street, London, England. Price, five shillings net.

While the English books on modern merchandising are not so useful to Canadian hardwaremen as the works published on this side of the Atlantic, the volume under review is certainly a valuable one for anyone in touch with English methods as well as for any who can assimilate information and use it to suit local purposes.

The book is tastily bound in art cloth and its 340 pages are replete with illustrations, diagrams and tables suggesting methods of storing and displaying goods, filing accounts, keeping sets of books suitable for the hardware trade, etc. The first section deals with the shop and fittings, the third with general suggestions as to details, the fourth with tables and formulae, and the fifth with special departments and side lines. Each section is thoroughly covered and the whole comprises a work which is probably the best yet written in the Mother Country.

Specimen Copies Free on Application.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

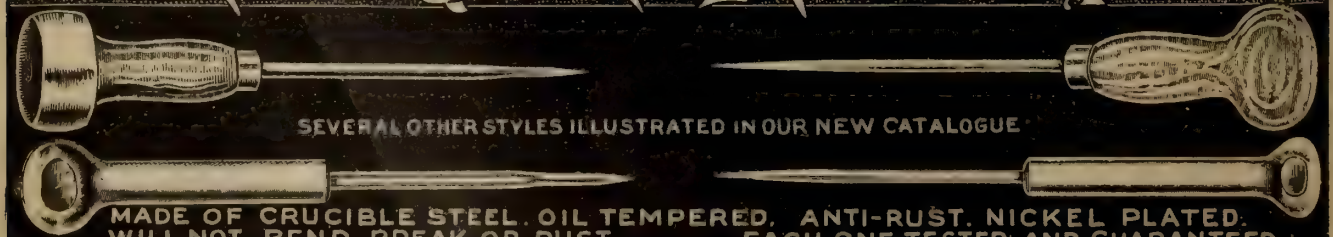
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.



Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

The Fisk
Detachable Motor Tire

Better than any "air pressure" tire because of its safety. It can't creep or roll or come off, no matter what happens.

Better than any other "fastened" tire, because of its simple and easy adjustment, its circular air chamber which keeps the inner tube from injury, and because of its flat and solid base which adds to its comfort and safety.

THE PATTERN —AND— THE PRICE

The Hudson Pattern OF APPLE PARERS

is unbeatable, either as to being the most satisfactory model or as to selling at the most satisfactory price. You have the ***model*** and the ***price***—and something more: a big field to sell to. Business this season will be especially brisk. You know that American Parers cannot compete with our goods, and that there are no other Parers made in Canada to compete with them. Conclusion: Order a goodly stock of ***The Hudson Pattern*** right away. If your jobber cannot supply you, we can—any quantity, on shortest notice.

Davidson's Cereal Steam Cooker and Vegetable Boiler

Stew Pan with Enamel Cover

Wire Egg and Vegetable Boiler

White Cereal Dish

Using the well known application of Steam in a novel and convenient manner.

The inside Cereal Dish being suspended in the Stew Pan by means of a useful wire basket; is always surrounded by steam, ensuring the perfect and hygienic cooking of the contents.

The Wire Basket has many additional advantages, as it can be used for either boiling Eggs or Vegetables, and having wire handles at the sides it is very easy to handle.

The inside Cereal Dish is readily removed, and can be used on the dining table in a plated receptacle, or without, as this dish is always supplied in White Enamel only.

SIZES AND DESCRIPTION

No. 13—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; One 3 quart Cereal Dish.
No. 15—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; One 5 quart Cereal Dish.
No. 35—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; Two Cereal Dishes, one each 3 and 5 qt.

Made in "Premier" and "Colonial" Enamelled Steel Ware.

GAS AS A FUEL FOR HOT-AIR HEATING

By R. S. THOMPSON, New York.

FOR cleanliness, convenience of management and economy of labor, gas is the ideal fuel. I believe the day is not far distant when the householder would no more think of fitting his cellar with coal in order to supply his house with heat than he would of putting a slaughter house in his cellar in order to supply his family with meat.

So obvious are the advantages of gas as fuel that on the introduction of natural gas, most people in the gas regions who had hot-air furnaces made haste to have the grates taken out and gas-burners put in. They had their cellars cleaned up and their coal-bins taken away.

First Experimen's Unsatisfactory.

In a large proportion of cases, after a trial for a single season, they made equal haste in having the gas-burners taken out, the grates put back and their coal-bins fitted up again.

So generally unsatisfactory was the result of the attempt to use natural gas in hot-air furnaces, that it became a generally accepted idea throughout the gas regions that gas was adapted only for use in stoves and was entirely unsuited to hot-air furnaces.

And yet there is no scientific reason why gas cannot be as successfully used in hot-air furnaces as in any other form of heating apparatus.

The difficulty arose from lack of proper consideration of the conditions requisite in using a new fuel. Furnace men were putting new wine into old bottles. The result was that the old bottles (funaces) were spoiled and the new wine (natural gas) was wasted.

Gas and Coal.

There is a wide difference between a gas fire and a coal fire, each developing the same number of heat units per minute.

With coal, there is a bulk of intensely heated carbon throwing off radiant heat in great quantity, consequently the firebox and combustion-chamber of the furnace become intensely heated by that radiant heat and a comparatively small amount of this highly heated surface will heat a large amount of air.

There is comparatively little radiation of heat from the pure blue flame produced by the perfect combustion of natural gas. The heat produced is principally contained in the gaseous products of combustion. Owing to the dilution of these products with the nitrogen from the air and with the excess air usually admitted, this temperature is not very high. One of the principal products of the combustion of gas is water in the form of steam, and this contains in latent form a large amount of heat.

In the combustion of one thousand cubic feet of natural gas there will be produced from eighty to one hundred pounds of water in the form of steam. This steam will contain from eighty to one hundred thousand B. T. U. as latent heat which cannot be utilized until the steam is condensed into water by lowering its temperature below 212 degrees.

The attempts to heat a building with steam, allowing the live steam to escape uncondensed into a chimney, would be no more extravagant or unscientific than the attempt to heat with gas while allowing the live steam produced by the combustion of the gas to escape uncondensed into the chimney.

Economical Hot-Air Heating by Gas.

In order to use gas successfully and economically in hot-air heating, the following points are necessary:

1. A burner which will secure combustion of all the gas which passes through it and will not permit the production of carbon monoxide, or as it is commonly called, "carbonic oxide gas."

2. A sufficient amount of surface exposed to the products of combustion on one side and to air at a temperature very considerably below 212 degrees on the other, and so arranged that the products of combustion will be reduced to a temperature below 212 degrees before leaving the furnace.

3. A sufficient quantity of air passing through the furnace to take the heat from the products of combustion without itself becoming sufficiently heated to impair its power in extracting heat.

4. Provision for getting rid of the water of condensation.

We will consider these points in order.

The Burner.

There has been much unscientific talk on this subject. The heat is in the gas, not in the burner. If a burner secures the combustion of all the gas which passes through it without the production of carbon monoxide, it has done all that can be done. Talk about burners which burn large quantities of air is all nonsense. A cubic foot of gas in complete combustion combines with a fixed quantity of exygen. This quantity can be neither increased nor decreased. If the quantity of air supplied is insufficient, part of the gas will be unburned. If the air is supplied in excess of requirement, the excess of air will not be used. If more air is mixed with the gas than required, combustion will be imperfect and part of the gas will be unburned.

A Perfect Gas Flame.

A perfect gas flame is a clear blue and perfectly transparent. A white or yellow flame, or a milky-blue flame indicates imperfect combustion. Sometimes a gas flame seems blue, but by holding an object on the other side it will be found it is not transparent. This indicates imperfect combustion.

If the flame "blows" or "lifts" away from the burner it shows too much air and consequently imperfect combustion.

If the fire "streaks up" in long, ragged flames, there is imperfect combustion.

If any portion of the burned gas mixes

Maritime Wholesalers Automobiling at Digby, N. S.

Maritime Wholesale Hardware Association at "The Pines," Digby, N. S.

with the fresh gas, it poisons the latter and there is imperfect combustion, for a small amount of carbon dioxide mixed with gas renders the whole mixture incombustible.

The best gas fire is obtained by a large number of small jets so arranged that each jet will be fed with pure air and that the burned gas from one jet cannot become mixed with the fresh gas issuing from another.

A gas fire should have a supply of air in addition to that which is supplied through the mixer. It is impossible to supply enough air through the mixer to secure complete combustion, and one of the most common errors in setting gas-burners is the attempt to exclude all other air.

Should Not Be Excess of Air.

On the other hand, if an excess of air is supplied it will unduly reduce the temperature of the products of combustion.

It is a mistake to attempt to "hold the heat back," by tightly closing the damper in the smoke-pipe. When this is too tightly closed the poisonous products of combustion are retarded too long in the furnace and poison the fresh gas issuing from the burner. The way to avoid loss of heat to the chimney is to take the heat out of the products of combustion and then let them escape freely. When the heat has been extracted the sooner they are carried away the better. By actual test, with careful measurement of the heat units utilized in the air, I have found that more heat units were utilized with a free outlet to the chimney than with the damper tightly closed. In the latter case the smoke-pipe was cooler, but the total number of heat units developed per thousand feet of gas was less, showing that much of the gas was unburned.

Size of Mixer.

Considerable scientific knowledge, skill and common sense are required to properly adjust a burner and mixer so as to secure the proper mixture of gas and air and the proper pressure in the burner. A three-quarter inch mixer will, in some burners, carry in more air than an inch and a half mixer in others. No rule can be given. I have secured a perfect fire with a three-quarter inch mixer, using one hundred feet of gas an hour, and I have had other cases where not more than fifty feet of gas an hour could be burned with an inch and a quarter mixer. A burner adjusted for one locality may not work properly in another, as the composition of the gas and the pressure in the mains differ. The supply pipes should be of liberal dimensions, especially if long, as the friction in the pipes will reduce the pressure, and a low pressure at the mixer means an imperfect mixture of gas and air, and, in consequence, imperfect combustion.

The Surface.

It is impossible to give any hard and fast rule in regard to the amount of heating surface required, as there is much difference in the efficiency of surfaces, and so much depends on the quantity and temperature of the air carried over these surfaces. The problem is to extract the heat from the products of combustion, and no amount of surface will do this unless that surface is exposed to a constant current of air at a temperature considerably below 212 degrees. In general I have found that, with a liberal air supply, there should be about one square foot of surface for each cubic foot of gas burned per hour.

Air Supply.

This is not so difficult to estimate. Natural gas is a product of uncertain chemical composition, and this statement is even more true in regard to most artificial gas, but a good quality of natural gas should contain about one thousand B.T.U. to the cubic foot. This would heat about five hundred and fifty cubic feet of air one hundred degrees. It would therefore appear that the amount of air passed over the heated surfaces should be from three hundred to five hundred cubic feet for each cubic foot of gas consumed. The greater the amount of air and the lower its temperature when passing over the heated surfaces, the more complete will be the exhaustion of the heat.

This raises an interesting question as to what disposition should be made of this air after it is delivered to the room which I will consider later.

Disposing of Water of Condensation.

This is one of the most difficult problems in connection with the use of gas as fuel. A thousand cubic feet of gas weighs about thirty-seven pounds, and if of high quality contains from nine to eleven pounds of hydrogen, but as each pound of hydrogen in the gas combines during combustion with eight pounds of oxygen from the air, there is a production of nine pounds of water for each pound of hydrogen contained in the gas, and a thousand cubic feet of good gas will produce from eighty to one hundred pounds of water when burned. To allow this water to escape in the form of steam at a high temperature, involves, as already shown, a great waste of heat. To utilize this heat by cooling the products of combustion to the point where the steam will be condensed, involves the problem of disposing of the water of condensation.

Water Mechanically Carried Off.

By proper construction of the burner and regulation of the air supplied to the fire, a large portion of this water can be mechanically carried off through the chimney in the form of mist which is suspended in the air after the latent heat has been removed, but some of it will, under some conditions, form into drops, run down the inside of the chimney and drop from the furnace.

Therefore, every chimney used for a gas fire should be perfectly straight and lined with tile, and provided with an opening at the bottom for the escape of the water.

In several cases I have provided for a gas furnace a special chimney made of gas pipe from three to six inches in diameter, according to the size of the furnace, with an inch and a quarter pipe at the bottom connected with a drain.

Sick Furnaces.

The furnace itself should be provided with some small openings to drain off the water, though, of course, the arrangement of these will depend on the construction of the furnace. I have been called to "sick furnaces" where the trouble was that the lower flues had become completely filled with water. I was called to one case where the furnace was connected with the chimney by means of a smoke-pipe thirty-five feet long. This pipe near the chimney was close to a window. I found the trouble was due to a careless janitor who had left this window open and the pipe at this joint had become completely closed with ice.

Corrosive Water of Condensation.

Most natural gas contains sulphur, and this when burned in connection with hydrogen produces sulphuric acid. The water of condensation is, therefore, usually quite corrosive. It will eat the mortar out of chimneys, hence the necessity for lining them with tile. It will corrode iron, so the smoke-pipe should be of heavy iron and coated inside and out with some acid-resisting paint. It should be kept in mind that the products of combustion of natural gas are not corrosive while hot. Corrosion begins only when these are sufficiently cooled to cause condensation of the steam. The more perfect the operation of your furnace, the more trouble you will have with condensation. Complete absence of trouble from this source is usually an indication that the furnace is ineffective.

Much Air Needed.

I referred to the problem of disposing of the large amount of air which, in using gas, is required to extract properly the heat from the products of combustion. With a furnace burning one hundred cubic feet of gas per hour this would require from thirty to fifty thousand cubic feet of air per hour. The large amount is preferable.

But a family of six persons would require for the most perfect ventilation but ten thousand eight hundred cubic feet of fresh air per hour, so if all this air that is poured into the house is allowed to escape at a temperature of 70 degrees through the windows or drawn off by a ventilating stack, there will be an enormous waste of heat.

To my mind, there is but one proper solution of this problem. Return to the furnace all the air supplied in excess of the amount required for thorough ventilation.

This would require additional expense in the installation of the system. But any system of hot-air heating is defective which does not provide means for the exhaust of the waste air as well as means for the supply of warm air. A perfect system of hot-air heating should include double piping; that is to say, one set of pipes for the supply and another set of pipes for the exhaust.

The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

AN ALL-STEEL REFRIGERATOR.

THE refrigerator shown herewith is made by the Metal Stamping Co., Jackson, Mich. The refrigerator is made throughout of galvanized and cold rolled steel. It is cylindrical in form and has two metal shelves, shown in Fig. 2. The shelves revolve on a central post, making access to any article on them most convenient by revolving the shelf. The shelves may also be quickly raised, lowered or removed. When they are removed or are cleared of contents the interior can be readily cleaned by a stream from a hose, or by the use of a cloth. Claim is made that the circulation of air from the ice chamber above to the provision chamber below is so scientifically planned that the provision chamber is kept so free from moisture that matches may be stored in it without injuring their igniting quality. The round form of refrigerator is commended by its maker, not only because a cylinder embodies the maximum storage space in a given size, but because it has no corners in which unsanitary matter can find lodgement.

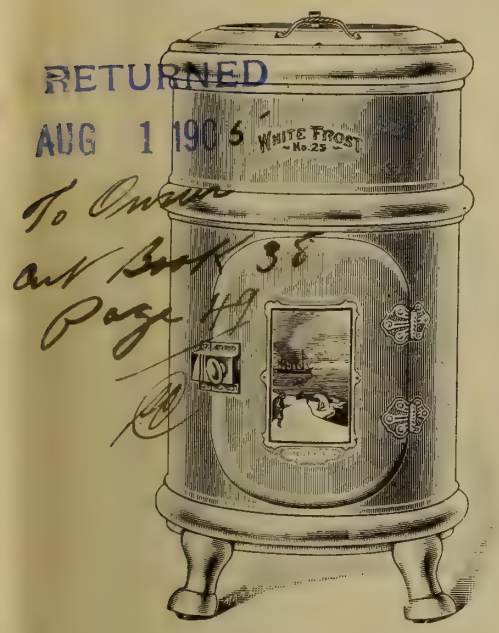

Fig. 1.—The Refrigerator Closed.

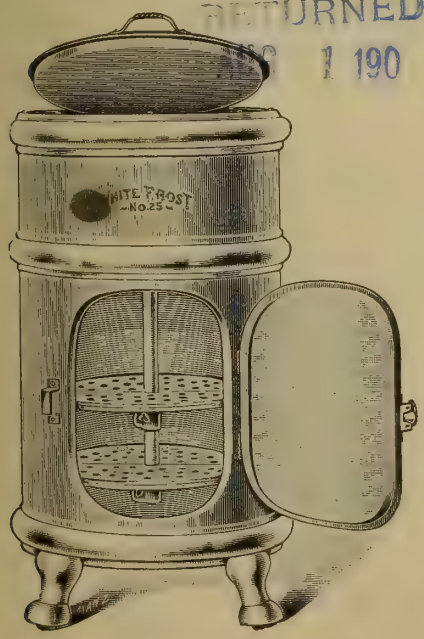

Fig. 2.—Interior of All-Steel Refrigerator.

The space between the outer and inner walls of the refrigerator is filled with maltha and asbestos insulation. The absence of any wood or other absorbent material in the interior or exterior of the refrigerator eliminates warping or shrinking and prevents molding or decay, making this refrigerator practically everlasting. Claim is also made that a material saving in ice is effected. Externally the refrigerator is attractive, being finished in white enamel, richly decorated.

The Successful Paint Dealer

aims to get the best results in the easiest and quickest way, to please his customers and make a good profit for himself. This can be accomplished by selling the

SHERWIN-WILLIAMS ALUMNIUM PAINT

for engines, radiators, boilers, steam pipes, and all metal surfaces where a bright, lasting silver finish is desired. This paint will always give the most satisfactory results—to painter and customer.

Sherwin-Williams Aluminum Paint has all the economical qualities of a good aluminum paint. It covers most surface, flows smoothly and evenly under the brush and gives a beautiful silvery appearance.

Sherwin-Williams Aluminum Paint has no offensive bananna-like odor, which is so objectionable in other paints of this kind.

ELECTRIC CO. REORGANIZING.

PLANS for the reorganization of the Sayer Electric Co., of Montreal, are under way, and the firm will be known in future as the Sayer Electric Limited, with a capital of $100,000. Arrangements are being made to secure the building on the northwest corner of Beaver Hall Hill and Craig streets facing Victoria square. The securing of this building will allow Mr. Sayer to go into the manufacture of electrical specialties and supplies much more extensively. He also purposes going into general electrical contracting for all classes of work.

Mr. Sayer has been connected with this line of business for some time, having started as messenger boy with T. W. Ness in 1890. After four years he accepted a position with the Montreal Electric Co. In 1896 he started in business for himself at No. 60 Victoria square, where he remained until 1899. In 1900 he again started for himself under the name of the Sayer Electric Co., which has continued until the present reorganization. The old company was recognized as one of the largest electrical contractors in eastern Canada, and although this particular branch of the business enjoyed a marked increase last year, Mr. Sayer is looking forward to transacting business of a volume such as has never been attained in the history of the firm.

SEASONABLE SUGGESTIONS.

Push your Summer goods now. Dress your window with them.

Keep your name before the public.

Yes, it's warm, but keep at it just the same.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

857. A South African importer desires quotations per lb. c.i.f. Cape Town for Manila binder twine, in 4-lb. balls.

859. A Birmingham manufacturer of locks and brassfounders' goods wishes to do business with Canada.

865. A Welsh firm manufacturing enamelled slate mantelpieces and slabs make inquiry respecting the demand for these goods in Canada.

867. A Japanese importing firm wishes to be put in communication with the manufacturers of wire nails, wood screws and galvanized iron wire, with a view of importing same into Japan.

PROFITS IN SMALLWARES.

In dull periods the right goods to advertise which are always a matter of importance become your most pressing need. Not only is it then especially difficult to tempt first purchasers, but also is it difficult to keep old customers regular in their buying.

Aside from the direct profits low priced goods are known to yield, it is among them that merchants find the most desirable leaders for use in creating Summer trade.

There are several reasons for this fact. In almost every line there are 5 and 10-cent items. With no other class of goods, therefore, can more wants be appealed to than with them.

The very smallness of the price makes the goods alluring not only to those who are forced to spend dimes carefully, but also to those who are willing to be convinced that worth can be had for less than they are able to pay.

By arranging the smallwares on tables, by displaying them in the windows and other points of advantage, and by advertising them judiciously, it is surprising how large the total sales will amount to.

IMPLEMENT DEALERS' TROUBLES.

AN implement dealer, probably more than any other retailer, has an opportunity to realize how much in the way of a guarantee the average buyer expects for his money. One of the difficulties encountered by the dealer in agricultural implements, says Hardware, is the fact that the machinery he handles is much of it of a rather complicated nature, and it goes into the hands of men who are not machinists. Most dealers try to overcome this by sending out a competent man to set up and start the machine. Of course, it works all right while he is there to keep everything in first-class order. After he goes away, and the farmer is thrown upon his own resources, the trouble begins.

Nine out of ten farmers will agree with the statement that the very point at which they have their most serious trouble is one the book of directions skips entirely or describes under names confusing to one who is totally unfamiliar with that particular machine. It is so very simple to the manufacturer that he overlooks a lot of things the user wants to know. Usually it is the little things that make the trouble, and they are always hardest to locate. More than once the writer has sat on the questioner's bench and figured on mechanical equations containing twice as many unknown quantities as a well regulated algebra will permit, while inwardly cussing the fellow who ought to have said less and told more.

It seems to be a different problem for the man on the roof to see things from the standpoint of the fellow just starting up the ladder. There is no question, however, but that a large proportion of the machines sent out on trial, and which have been condemned, are less at fault than are the men who give instructions as to their use. The fact that the expert can run the machine does not count with the farmer so long as he cannot run it himself; also he wants instructions covering the difficulties he himself encounters; in other words, he wants them written from the user's rather than the manufacturer's viewpoint.

One big general agent for agricultural machinery has undertaken to solve the problem for himself in a unique way and get next the troubles of his customers. With each machine sent out goes a card which, when properly filled out by a purchaser, is good for payment on repairs up to a certain amount (depending upon machine purchased.) Before the card is honored it must be filled out with a statement of the customer's troubles, if any, in getting satisfaction out of the machine before accustomed to it; what point of the instructions seemed most incomplete; in short, a brief history of the buyer's trouble equation. By comparing these cards the dealer is frequently able to locate points wherein, under the directions sent out by the manufacturers, there is particular danger of dissatisfaction, and to guard against that point accordingly.

In the case of a number of machines he has found enough complaints regarding some minor and overlooked part to warrant him in issuing supplemental directions of his own. Then, too, these cards are a wonderful help to the expert starter in showing him at just what points of management he should be specially careful to instruct the buyer. Often the point seems trivial and unimportant, but when these incoming cards from the frequency of their complaints show that there is a general demand for instruction at this point, the lesson gathered from the cards is counted more to be relied on than the pre-conceived opinions of the seller.

I am not at all sure but there would be less friction between buyer and seller, less frequent complaints, and fewer returned goods, if dealers would generally adopt this conscientious effort to see things from the buyer's standpoint in other lines of the trade as well as in agricultural machinery.

With the increase of the use of electric lighting the hardwareman in the smaller cities is becoming something of an electrician. Whenever a plant is put in he certainly should be the first to carry the supplies and do wiring as it is strictly in his line of business. Electric bells and short distance telephones come under the same line and can be worked where there is no electric plant.

There are **HAMMERS** *that "Knock," and there are* **HAMMERS** *that convince. We employ the convincing kind; for instance, we say contact with the Hammer will not discharge an*

BUILDING AND CONSTRUCTION

THIS YEAR'S BUILDING BOOM.

ALL signs have favored the expectation that the present year will witness great, if not record-breaking, activity in building construction. Of course, it is hard—in fact, well-nigh impossible—to set definite limits to the total expenditure in this line in the country as a whole. The reasons for this are obvious. Municipal statistics, except in a comparatively few exceptions, are naturally vague. Even where, as in the case of the larger cities, there is a registry of the building permits and estimated cost of construction, there is the doubt, first, as to the statistical accuracy of the detailed estimates and, second, as to the ultimate carrying out of the entire volume of the work planned. There is the highest authority, for instance, for the statement that in some wide areas only two-thirds of the work projected for one year is actually carried out in that period. Then, again, there is the possibility always that widespread labor troubles may not only discourage possible building, but may actually check or hold up work upon which more than the initial steps have been taken.

Despite these drawbacks, however, there is a natural desire to set some measure to the probable scope of building activity in this country during the ensuing year. Bradstreet's has, therefore, endeavored to take steps to this end, and, while making the fullest allowances for all these diverse influences and drawbacks, a conscientious effort has been made to get a line on the proportions of 1905 building. The results obtained indicate an expenditure of $445,000,000 in 108 cities and towns in the United States, the returns being necessarily partial and not entirely conclusive of possible later special development, but are, nevertheless, indicative of a decided drift toward activity in all kinds of construction during the present calendar year. It is estimated that these figures cover only about three-fourths of the buildings being erected, the total being figured at $600,000,000 for the entire States.

A fair estimate of the cost of an average building is probably 40 per cent. for material and 60 per cent. for labor; but if half is allowed to each of these items, a total of $300,000,000 for material, such as lumber, brick, stone, iron, hardware and paint is possible, and a like sum must be credited to labor.

Canada's building development is even greater than that of the United States, the development in the larger cities and the western districts being marvelous. The putting into circulation of the vast amount of money as a result of this activity is bound to be felt by all sections of the community, but by none so much as the hardware trade, which now supplies the major portion of the articles called for in the construction of modern buildings.

Ten thousand dollars have been appropriated by the M.C.R. to be expended on a new building in St. Thomas.

BUILDING NOTES.

The new Winnipeg Normal School building is now under way.

An extensive cement plant is to be located at St. Peters, N.S.

A. B. Holly is building a fine new brick residence at St. John, N.B.

R. Thompson and R. Martin are erecting new residences at Fort Frances, Ont.

Within ten days, building permits to a total pf $47,725 have been issued in Edmonton.

New business buildings to the value of $130,000 have been contracted for in Brandon.

The Grand Valley Railway Co. will erect a station at Glenmorris in the near future.

A large new store and office building is being erected for Joseph Maw on Main street, Winnipeg.

R. Beyers will build a brick house at the corner of Minto avenue and Huron street, Hamilton.

Mr. Wm. Grayson has commenced the erection of a $12,000 one-storey brick block at Moose Jaw.

The Merchants Bank have purchased a fine site at Arcola, Man., and will erect a three-storey brick block there.

The contracts have been awarded for building two more storeys to G. F. Stephens & Co.'s warehouse, Winnipeg.

Moncton, N.B., is enjoying the greatest building boom in the history of the city. New structures and improvements now under way make a total expenditure of $200,000.

L. Bazin will construct a $4,000 building on Hermine street, Quebec, and Lieut.-Col. Boulanger will erect one to cost $3,500 on Champlain street of the same city.

Fraser Bros., Strathcona, have received the contract to build a 30,000-bushel elevator at Ponoka, and a flour mill and elevator for the Alberta Flour Mills Co. at Edmonton.

A large addition is being built to Gordon, Ironsides & Fares' abattoir, Winnipeg, and it is the intention of the firm to double the capacity of their establishment this year.

An apartment house is about to be erected at St. John, N.B. Mr. D. R. Jack, who is pushing the scheme, has secured subscriptions for nearly all the capital stock, which has been fixed at $100,000.

Contracts for the factory building of the Cone Power and Gas Machine Co., Limited, have been let at Galt, and work has been begun on the building, which is 80x40 feet. The work will be put through with the utmost despatch.

Cement from the new cement works at Sydney is being used in the construction of the post office at Antigonish, N.S. It is much whiter in appearance than the ordinary cement, sets very quickly, but does not get so hard as the foreign cement.

The manufacturing of cement by the

Sydney Cement Company began on July 10th. This is the first cement (Portland) to be manufactured east of Montreal in Canada. The new plant has a capacity for five hundred barrels per day of twenty- four hours.

The Merchants Bank will open up a branch at Napinka, Man., about the first of August. The citizens and farmers of that district have decided to erect a $5,000 building, the lower storey of which will be used by the bank, and the upper storey as a town hall.

Messrs. Alloway & Champion, Winnipeg, are erecting a two-storey bank building near the new C.P.R. depot, Winnipeg. The ground floor will be used for the purpose of the firm's banking business, while the second storey is being fitted up for general offices.

John Hanbury, of Brandon, Man., has started up the largest planing mill in British Columbia at Elks, and will handle lumber from the saw mills along the Crow's Nest road. Mr. Hanbury will make a specialty of getting out material for ready-made houses for settlers in the Northwest.

A twelve thousand dollar building is to be erected at the corner of St. James and Fulford streets, Montreal, by Mr. George Lanouette. The building is to be three stories in height, 60 feet square of brick and stone. The first floors will be occupied as stores and the upper flats will be used as dwellings.

Building operations in Montreal have now reached an almost terrible pace. The recent strike of the carpenters has not affected the trade in any way, a number of men having returned to work, and these in conjunction with the non-union men are able to keep the operations on all new buildings well under way. A few days ago the plasterers went out on strike also, but this strike, like many others of late, shows a disheartening spirit on the part of the men who were called out with the result that over half are yet at work. On Sherbrooke street alone, buildings, three million dollars in value, are being erected. Club houses, religious buildings, and hospitals are the most prominent on the list. These three classes alone amount to over two million, five hundred thousand dollars.

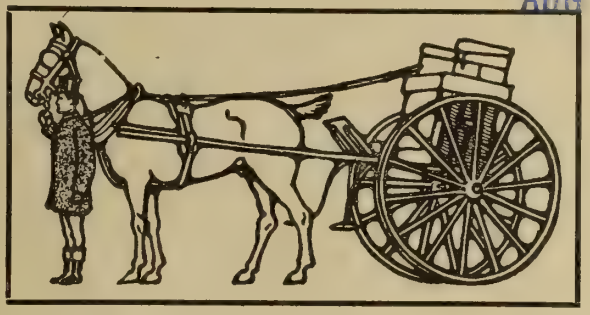
.LEWIS BROS.' NEW QUARTERS.

Raising the flag signalized the occupation last week of the new home of Lewis Bros., Limited, by this enterprising company, the event marking a new era in the history of the business. So systematically was the removal from the old to the new quarters conducted that business was not interrupted in the slightest, there being a place for everything and little time being found necessary to put everything in its place. An attractive circular, giving some information respecting the new building, has been mailed to the trade by the company.

TIN PLATE COMBINATION.

The chief tin plate bar makers of South Wales, finding that owing to the undercutting which has been going on for the past year or so, it was impossable to run their works with a sufficient margin of profit, met at Swansea recently to draw up articles for the formation of a combination to fix a satisfactory price-scale. In the future the prices agreed upon at this meeting will be adhered to by all parties to the agreement. Some of the largest buyers on hearing of this transaction declared that prices would either fall to a lower point than they are at present, or else "dumping" on the part of American manufacturers would take place upon the coast of Wales.

SATISFACTION



to the Consumer means profit to the Dealer.

Trade goes where it is served best. If you have what the consumer wants, you get his business.

Profit in it for you and satisfaction for him.

We believe in the same principles.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE Toronto Shipbuilding Co. are expected to have three new steamers ready for the Toronto harbor fleet by May 1, 1906. One is for the Niagara Navigation Co., and the other two for the Toronto Ferry Co. It has not yet been decided whether the two latter will be side-wheelers or screw steamers, but they will have a carrying capacity of about 2,000.

The Cincinnati Typewriter Co. are looking for a Canadian location.

An effort is being made to boom Stocton, Maine, and make it a rival of St. John, N.B.

The Edison Portland Cement Co. have increased their capital stock from $11,000,000 to $12,000,000.

It is announced that the G.T.R. will officially take over the Canada Atlantic Railway on September 1.

The Marconi Co. are investigating the possibilities of operating between Fort William, Winnipeg, St. Paul, Duluth and Owen Sound.

The newly-organized Standard Wire Fence Co., Limited, of Woodstock, will be ready to commence operations some time in September.

Fowler's Canadian Co., Limited, Hamilton, a branch of the Swift Co., of Chicago, will enlarge their plant at a cost of about $70,000.

Advices from the west state that the Kootenay district is now producing copper on a large scale, cheaper than anywhere else on the continent.

The big Eddy saw mill at Revelstoke, B.C., was burned to the ground last week. The loss will be heavy but the company intend rebuilding at once.

A contract for the construction of two breakwaters at Rondeau harbor has been given to the Pacific Construction Co. The price is in the vicinity of $110,000.

S. P. Hodgson, of Swan Lake, Man., has let the contract for a 100-barrel flour mill and 30,000-bushel elevator, to the Willford Manufacturing Co., Minneapolis.

The James Warnock Co., Galt, Ont., will devote all their factory space to the manufacture of tools, and will replace their spring plant with a modern tool plant.

A recent addition to the industries of the west is the Moose Jaw Show Case Co., of which Mr. A. Radley, formerly of the Dominion Show Case Co., Toronto, is the head.

The Electrical Development Co. of Ontario have decided to extend their line westward to London, touching at Brantford, Paris, Ingersoll, Woodstock and intermediate points.

Steel rails for the Guelph-Goderich extension of the C.P.R. are being sent out from the Soo works. They are of the 85-pound class, which insures a good roadbed for the new line.

Messrs. Mayhew and Gladstone, at the head of English capitalists, have obtained a free site from the Sydney, N. S., City Council for the $12,000,000 shipbuilding enterprise which they are promoting.

Messrs. Stetson & Cutter, a leading lumber firm of St. John, N.B., have taken a lease of the Mispec pulp mill at that place and will shortly instal new machinery to increase the capacity from 7,000 to 10,000 tons.

Frederick Doty, of the Goderich Engine Works, has purchased the hull of the recently burned steamer City of Collingwood, and will rebuild it. The steamer Lincoln, burned at Sandwich two months ago, is also being rebuilt at the same place.

A company, backed mostly by American capital, and with headquarters in Cleveland, Ohio, are looking for a local factory in which to manufacture a special line of brushes. It is likely that Brantford, Ont., will secure the factory, which will employ a large number of hands.

The Montreal Suspender and Umbrella Co. have asked the town of Arnprior, Ont., for a factory building and exemption from taxation for ten years, in consideration of which the company will commence the manufacture of their goods and will employ a large number of hands.

The first annual report of the Lake Superior Corporation (the Soo industries) is a very satisfactory one, but this result has been achieved largely on account of the very favorable conditions under which the subsidiary companies have been working. A good deal has yet to be accomplished at the Soo.

Messrs. Fleming, of the Phoenix Foundry, St. John, N.B., have been awarded the contract by the Department of Public Works, Ottawa, for the construction of two steel scows for the dredge Geo. McKenzie. These scows will be one hundred feet long, twenty-two feet wide and eight feet deep, and will have a carrying capacity of two hundred cubic yards. They will be the first steel scows built in St. John.

Companies Incorporated.

The surrender of the charter of the Perth Electric Light Co., Limited, has been accepted.

The Horse Shoe Quarry Co., Limited, have been granted the right to increase their share capital from $40,000 to $100,000.

Concretes, Limited, of Toronto, have been incorporated with a share capital of $40,000, for the purpose of constructing roadways, sidewalks, buildings, etc. The directors are C. Curtis, W. H. Peppin, and J. A. Milne, all of Toronto.

The Guelph Stove Co., Limited, of Guelph, share capital $200,000, purpose to manufacture and deal in stoves, furnaces, boilers, heaters and metals of all kinds. The directors are J. Brown, M. Kelly, F. Nunan, C. Kloepfer, and F. T. Coghlan, all of Guelph.

ed, Niagara Falls, Ont., have been incorporated with a share capital of $1,000,000, for the purpose of developing water power, etc. The directors are J. S. Lovell, W. Bain, E. W. McNeill, S. G. Crowell, W. F. Ralph, all of Toronto.

The Bond Hardware Co., Limited, of Guelph, have been incorporated with a share capital of $100,000, for the purpose of carrying on the business of hardware merchants. The directors are: J. M. Bond, W. G. Bond, T. A. Keating, J. S. Millar, and F. R. Bond, all of Guelph.

The Toronto Sand Lime Brick Co., Toronto Junction, have been incorporated with a share capital of $40,000, for the purpose of manufacturing brick and doing a general business in sand, lime, gravel, cement, etc. The directors are G. H. Large, J. Schultz, and J. S. Proctor.

The Steel Concrete Co., Limited, of Montreal, have been incorporated with a share capital of $200,000, for the purpose of carrying on a business as engineers, contractors, etc. The directors are: J. L. Harrington, E. A. Wallberg, and W. F. Boggis, of Montreal, and H. Fisher and J. Murphy, of Ottawa.

Eastern Coal Co., Limited, of Toronto, have been incorporated with a share capital of $500,000, for the purpose of carrying on the business of a mining, milling, reduction and development company. The directors are: J. S. Lovell, E. W. McNeill, R. Gowans, S. G. Crowell and W. H. Blake, all of Toronto.

Ogden Oil Co., Limited, of Windsor, have been incorporated with a share capital of $50,000, for the purpose of mining and boring for oil, gas and other mineral products, etc. The directors are: W. W. Taberner, of Chicago, Ill.; F. Rehm, of Detroit, Mich.; J. W. Hanna, J. Wigle, and J. R. Dixon, of Windsor.

The Spider Lake Mining Co., Limited, of Windsor, have been incorporated with a share capital of $1,000,000, for the purpose of carrying on the business of a mining, milling, reduction and development company. The directors are: H. D. Keller, A. H. Rochey, J. E. Burgess, C. L. Brumme, all of Detroit, and A. R. Bartlet, of Windsor.

Wallingford Bros., Limited, of Ottawa, have been incorporated with a share capital of $45,000, for the purpose of carrying on the business of a mining, milling, reduction and developing company. The directors are: F. Cornu, of L'Ange Gardien, Quebec; E. Wallingford, F. S. Shirley, the Hon. Napoleon Antoine Belcourt, and M. I. Hickson, all of Ottawa.

The Ontario Transmission Co., Limited, of Niagara Falls, Ont., have been incorporated with a share capital of $1,000,000, for the purpose of developing water and other powers for the production of electric, steam, pneumatic, hydraulic or other power or force. The directors are: J. S. Lovell, W. Bain, E. W. McNeill, S. G. Crowell, W. F. Ralph, all of Toronto.

The Beaver Mica & Mining Co., Limited, of Sundridge, have been incorporated with a share capital of $50,000, for the purpose of carrying on the operations of a mining, milling and development company. The directors are Joseph Pinkerton and J. J. Jackson, of Township of Strong District of Parry Sound; J. Herrgott, of Sundridge, and J. H. McCurr of North Bay.

No. 14. OSHAWA, ONT. JULY 29, 1905

A STORY

Pedlar's **"Perfect" Metal Lath** sustains the same relationship to the plastered wall or ceiling as does the keystone to the arch; that is, it holds the whole thing together. A hundred years ago, the "split-board" lath was the article used in the construction of the most pretentious buildings of the time. Later on came the sawed wood lath, which, while a vast improvement upon the "split-board," has always been objectionable because of the staining and cracking of plaster which are inseparable from the use of wood lath.

Within comparatively few years, the fire hazard incident to the closely-built sections of our large cities, necessitated improved methods in construction and set thinking men to work out the problem of fire-proof buildings, which resulted in the production of woven wire fabric for lathing purposes. This was followed, later on, by the expanded metal process, that is, the slitting and expanding of large sheets of steel, forming a diamond-shaped mesh. Other and less desirable sheet steel products of various forms have more recently been put on the market, many of which have proved more or less a failure. Then, the cost of manufacturing these products necessitated their being marketed at prices which rendered their general use almost prohibitive.

OF "PERFECT"

It remained for the Pedlar People to solve the problem, less than a year ago, by placing their **"Perfect" Metal Lath** on the market. The improved and rapid-working machinery in use at their factory in Oshawa has revolutionized the expanded metal lath business of the country and this valuable product is now available to the builder of the humble cottage home or the modern skyscraper. The mesh, like the price of Pedlar's "Perfect," is the smallest on the market, and where modern, quick-drying patent plasters are being used, "Perfect" lath is necessary to the securing of satisfactory results. Wide-awake hardwaremen from the Atlantic to the Pacific, are carrying the "Perfect" in stock, and their sales are increasing.

SUCCESS

How about it, Mr. Hardwareman? Do you belong to the wide-awakes? If not, you should get initiated. A postcard will bring you the secret. A sample order will do the rest. We make many other desirable lines which the hardwareman should, and very many do, carry—**Steel Ceiling and Wall Covering, Metal Shingles, Tile, Siding, Cornices, Store Fronts, Ornamental Zinc and Copper Work, Eavetrough, Conductor Pipe and all accessories.**

The Pedlar People

FAIRBANKS' MONTREAL HOME.

Canadian Fairbanks Co., Limited, of which Mr. Henry J. Fuller is president, has finished moving from its old premises at 747-749 Craig street, to its new building at 444 St. James street. This new warehouse has been entirely renovated inside and as it contains double the floor space of the old building, which was 18,500 feet, it gives the company a better chance to display its goods and carry a larger stock than heretofore.

The basement is devoted to valves and fittings of all kinds, neatly arranged in bins. The front part of the ground floor

New Home of the Canadian Fairbanks Company, Ltd., at Montreal.

is used as a show room, where the company has on exhibition samples of the different lines of its manufacture and agencies, including a new Fairbanks-Morse line of gas and gasoline engines, steam pumps and railway equipment, for which it has recently taken the Canadian sales agency.

The offices of the manager, Mr. Rudel, and the sales offices, are also located on the ground floor, other departments located on this floor being the railway supply department, transmission department, steam specialty department, scale department and the company's private telephone exchange. The company has installed a trolley with travelling chain block which enables them to handle the heaviest pieces of machinery with comparative ease.

The first floor is devoted to the offices of the president, secretary and treasurer, also to the advertising and publicity department and the engine and steam pump department, while in the rear of these offices the company's large stock of trucks is kept.

On the third floor is the stock of power transmission appliances such as shafting, hangers, belting, pulleys, clutches, etc., etc. This floor is also devoted to the steam specialty department, such as packings, engineer's supplies, boiler fittings, etc. The top floor is used entirely for scales as all these have to be inspected by the government inspector before being shipped.

The company still retain their warehouses on Oak street, and repair shop at Murray street, and the increased staff and space which they now have is certainly an evidence of the enormous growth of their business in Canada

A hearty invitation is extended by the company to all their friends and customers to call and inspect their new premises at any time, when they will be glad to show the immense stock they are carrying and their facilities for billing orders promptly.

CANADIAN TARIFF CHANGES.

The following memorandum of Canadian tariff changes has been issued by the Department of Customs, to take effect on and after July 7 last :

1. That it is expedient to amend the customs tariff, 1897, as amended by subsequent Acts, to the following effect :

Schedule "A" is amended as follows :

Item 158—strike out the words "dry white and."

The following items to be inserted :

158. (a) Dry white lead, thirty per cent. ad valorem.

158. (b) White lead ground in oil, thirty-five per cent. ad valorem.

Item 187 is repealed, and the following substituted :

187. Cement, Portland and hydraulic or water lime, in barrels or casks, the weight of the package to be included in the weight for duty, twelve and one-half cents per one hundred pounds; in bags, twelve and one-half cents per one hundred pounds, together with twenty-five per cent ad valorem on the bag.

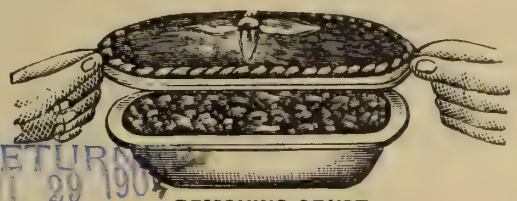
Schedule "B" is amended by repealing item 455, and substituting the following :

455. Settlers' effects, viz.: Wearing apparel, books, usual and reasonable household furniture and other household effects; instruments and tools of trade, occupation or employment, guns, musical instruments, domestic sewing machines, typewriters, bicycles, carts, wagons and other highway vehicles, agricultural implements and live stock for the farm, not to include live stock or articles for sale, or for use as a contractor's outfit, nor vehicles nor implements moved by mechanical power, nor machinery for use in any manufacturing establishment; all the foregoing if actually owned abroad by the settler for at least six months before his removal to Canada and subject to regulations by the Minister of Customs : Provided that any dutiable articles entered as settlers' effects may not be so entered unless brought by the settler on his first arrival, and shall not be sold or otherwise disposed of without payment of duty until after twelve months' actual use in Canada.

2. The exemption from duty of machinery and structural iron and steel for the construction and equipment of factories for the manufacture of sugar from beet root, authorized by section 11 of chapter 11 of the Acts of 1904, is extended from April 1, 1905, to June 30, 1906.

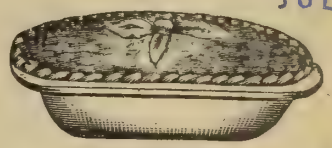
3. The exemption from duty of machinery and appliances of a kind not made in Canada for use exclusively in alluvial gold mining, authorized by section 12 of the said chapter, is extended from July 1, 1905, to June 30, 1906.

4. Section 18 of the said chapter is amended by inserting after the word "production" in the fourth line, the words "or from any British country."



Carelessness is another word for extravagance.

A hardwareman with a repair shop is in a better position to satisfy customers than a mail-order house.



THE M. B. PATENT PIE DISH

COMPLETE WITH RIM

REMOVING CRUST

A PERFECT PIE

RETURNED JUL 29 1905

The M. B. Patent Pie Dish solves a real domestic problem. No more burnt crust or partially cooked fruit or meat. Every cook, amateur or professional, realizes the difficulty of ascertaining under hitherto existing conditions whether the contents of a pie are fully or only partially cooked. The M.B. Patent Pie Dish **Solves the Problem**

ITS ADVANTAGES ARE AS UNDER:

1st. **A perfectly cooked crust.**

2nd. **Perfectly cooked Fruit or Meat.**

3rd. **The Patent Rim acts as a paste cutter.**

4th. **The Patent Rim acts as a Pie Vent and dispenses with the clumsy contrivance hitherto used for that purpose.**

5th **The Patent Rim being made with rolled edge and Enamelled White adds to the appearance of the Pie Dish and makes unnecessary the serviette hitherto used for table decoration. Thus an Enamelled Pie Dish is much superior to a China or Stoneware Dish, since Enamelled Steel heats much quicker and thus causes the paste to rise better.**

NEW ADVERTISEMENTS:

Gagnier, H., Limited, Toronto.

PLUMBERS' CONVENTION.

WINNIPEG will be the Mecca for plumbers and steamfitters from all parts of Canada on August 8, 9, and 10, and if previous conventions are any criterion to draw a forecast by, a goodly number of supply men will be along to give the delegates the benefit of their judgment in all matters pertaining to the trade and in how to get the greatest possible enjoyment out of the least possible time.

Delegates are expected from the salt water regions on both sides of the continent, while the fresh water lakes district will send a fair representation to fraternize with the progressive westerners who are preparing a good time for all comers in the metropolis of the Canadian West. Winnipeg hospitality, as well as Winnipeg water, will be kept on tap in unlimited quantity.

There is much important work to be done during the session and the delegation present should be large and representative. In those districts where organization is strong trade conditions are very satisfactory. A live campaign should be inaugurated to enroll every plumber in Canada into the association, so that the good results of a compact organization will be felt in all parts of the Dominion.

Mr. J. A. Gordon, Montreal, secretary of the National Association, reports that preparations for the gathering are completed, although the programme drafted by the Winnipeg committee has not been sent east as yet. Mr. Gordon expects a good representation from the Maritime Provinces, including Mr. Watson, of Moncton, and Mr. Farquhar, of Halifax. Among these who attend from Montreal will be Messrs. W. R. J. Hughes, J. Laurier, F. Moll, G. C. Denman, Walter Ryan, John Watson, J. A. Gordon and J. Thibeault. The party will travel on the Grand Trunk, via Chicago and St. Paul. Representatives from the Lower Provinces are expected in Montreal about the third or fourth of the month. All of the representatives, including the Montrealers, will leave on the fourth of August, picking up the Ontario men at Toronto and proceeding on together. At Chicago, the fraternal delegates representing the American National Association, are expected to join the party.

Some of the party, including Mr. Gordon, are intending to go on to the coast after the convention is concluded.

ON SPECIAL BRANDS.

FOR some time past the trade journals in the United States have been devoting considerable space to a discussion of the rights of jobbers to adopt special brands for the goods they handle. The question has been taken up at conventions representing the three interests involved—the manufacturers, jobbers and retailers,—and the views of each have been very strongly presented.

From the manufacturers' standpoint, the jobbers' special brand is decidedly a disadvantage, for it completely buries the identity of the firm really responsible for the goods. It is claimed that, as the manufacturer is, in the final count, alone responsible for the quality of his products, it is altogether unfair to him for the jobber, who is simply a distributor, to put a brand on the goods and claim them as his own. As the business success of a firm largely depends upon the reputation of their products, and the manufacturer is altogether unknown to the consumer unless his name appear upon the customer's purchase, it is certainly to the interest of the manufacturer that the jobber's special brand be eliminated.

But the jobber looks at the question from a different standpoint. He claims that, in simply distributing the manufacturers' products, he is investing his capital in building up a reputation for the producing firm. If, however, he can get hold of a good article and distinguish it by his own private brand, he is bringing himself to the notice of the public, and increasing his chance of success. If the consumers ask for a certain line of goods the sales of such goods will grow rapidly, and, if the jobber's name is on them the growth will be to his interest rather than to the manufacturer's.

The retailer considers the matter in a more or less impersonal light. He knows that the dispute over special brands is largely a selfish one, involving only the manufacturer and jobber. The manufacturer wishes his individuality to descend through the jobber and retailer to the consumer, and, in the same way, the jobber wishes the maker and retailer to combine in forwarding the interests of his brand. The objection to special brands, from a retailer's standpoint, is that, owing to the jobber's methods of buying, it will be difficult and, in the case of small firms, almost impossible to maintain a uniform quality in their goods. It is claimed that few, if any, manufacturers will put first quality material into goods other than those which bear the brand of the maker. Furthermore, the branding of goods with the jobber's private mark increases the cost of production and will, consequently, either increase the price to the retailer or lower the quality.

The question at present is undecided. The manufacturers are dead against special brands for the jobbers, and will do their utmost, by combinations and agreements of producing firms, to do away with what they consider an evil. The jobbers will stick to their brands through thick and thin, and threaten, if they are prevented from securing them by the manufacturers, to band together and themselves produce articles for their own distribution bearing their respective brands.

Complications are bound to result if this course is followed, and the situation is being watched with keen interest by the retailers.

INTERNATIONAL STEEL POOL.

STEEL rails are not now a subject for keen competition, as the leading producers in America and Europe have been working together quite closely. It is understood that an arrangement has been arrived at giving to American manufacturers the steel rail trade of the American continent, and that the European manufacturers are to be free from American competition in all other parts of the world except South Africa. The English and French works have the prior right of furnishing rails to their colonies, while the German works are to have prior rights in Norway, Sweden and Denmark. Other international trade is divided among English, German, Belgian and French works.

This arrangement probably means the maintenance of the present prices in countries where rails are produced and higher prices in other countries, while the success of this pool will probably result in a similar arrangement governing other branches of the steel trade.

THE HOLIDAY SEASON.

DURING July and August nature extends an invitation to business men to break away from the strenuous life of modern commercialism and fraternize with the birds and plant life of farm and forest. Nature is at its best at this season, and the influence of the fresh air and Summer warmth, free from the cares of business life, is what is most needed by the man who has been giving his best energies for months or years in developing the business he is engaged in.

It is a good investment to exchange a few dollars for health and happiness, and every man owes it to himself, as well as to those dependent upon him, to take a brief respite from business activity during the warm Summer season. And if this reasoning is correct it applies to the clerk as well as the merchant. A holiday will do the clerk as much good as the employer, and recognition of faithful services by the granting of a week or fortnight's holidays at the employer's expense will do much in encouraging the employe to do his utmost to further the interests of the appreciative merchant.

A fresh, vigorous brain will give better service than a fagged one. The saving of a few dollars now by economizing on a vacation will not pay if it means a break down next season and a heavy doctor's bill to pay then. The Summer is the time of gladness, and it is a paying investment to partake liberally of the opportunities provided for communing with nature. Take a holiday this month and encourage those associated with you in business to do likewise.

COPYING CANADA.

ONCE again the Mother Country has followed the lead of her "Premier Colony" in matters of trade; this time in the formation of an association, representative of British manufacturers and trades interested in export business, to be known as the Manufacturers' Association of Great Britain. The object of the new institution will be similar to that of the Canadian Manufacturers' Association, namely, co-ordinating the various industrial forces and co-operating among the leading manufacturers and merchants, chambers of commerce, etc., to promote and expand British trade in foreign and colonial markets.

The working machinery provides for commercial agents in all parts of the world, similar to the Canadian commercial agency system. These agents will report on openings for trade and local changes and conditions within their respective spheres, and disseminate such information among firms whom it will most benefit. A trade index of British manufacturers will also be compiled in the chief commercial languages of the world, and distributed free to chambers of commerce, mercantile houses, and other business interests at home and abroad. Information regarding the commercial standing of business firms or mercantile houses, railway rates and shipping freights all over the world, will be collected and supplied, and a staff organized capable of corresponding on technical and commercial subjects in any language, and of translating commercial catalogues and similar documents. One of the main objects of the association will be the dissemination of knowledge of British goods in all possible over-sea markets.

MONTREAL JOBBERS PROTEST.

AT a meeting of the Montreal Metal and Hardware Association, held in the Board of Trade on July 20, it was decided to interview the Provincial Government and try and have the law respecting the Quebec tax rescinded.

When the Quebec Cabinet met in Montreal on July 25, they were interviewed by Messrs. G. A. Kohl, of B. & S. H. Thompson & Co., Montreal; J. B. Learmont, of Caverhill, Learmont & Co., and T. H. Newman, of the same company, as a delegation representing the above association.

They protested against the new license tax of $300 on commercial travelers representing foreign firms, which had no quarters in the province. The tax, they argued, would seriously interfere with the wholesale hardware trade of the province, which was largely centred at Montreal, and drive the trade to other centres, such as Toronto. Several foreign travelers had come here, and on finding the new tax in force, had refused to pay it and returned, or gone to Toronto, and declared that any business they did with Montreal merchants must be conducted by mail, so as to avoid the tax.

The effect of the new tax would be to drive trade to other provinces, and in proof of this assertion the delegates produced letters from several English manufacturing firms, stating that no more travelers would be sent to Quebec Province, and if the Montreal merchants wished to do business with them it must be through their agents at Toronto.

Although the Government promised due consideration to the proposals of the delegation, it is felt that the Government will not repeal the Act or change it in any way. Hon. Mr. McCorkill is very firm on the question, and regardless of the harm it will do to the province it will be enforced.

IRON MINING IN NOVA SCOTIA.

COMMENTING on the article reproduced in Hardware and Metal recently from the Halifax Chronicle discussing the conditions of iron mining in Nova Scotia, the editor of the Nova Scotia Mining Record writes:

"In my opinion the result of the policy has been more beneficial than harmful, even though it may have resulted in a lessened production of Nova Scotia ore, which is a debateable point. Under the old poficy which favored Canadian ores and also their products, iron ore mining in Nova Scotia did not increase, but remained in an unsatisfactory condition. For instance, in 1884 the quantity mined was 54,000 tons, in 1896 the quantity raised was only 2,000 greater. The preference given to Canadian ores and their products did not seem to have any appreciable effects as a stimulus to ore mining. Not since iron mining began in Nova Scotia, no matter how favorable the conditions, has the output reached 85,000 tons. Had the old policy been continued is there any likelihood that the output to-day would have been larger than twenty years ago? Not likely. For the reason that outside of Nictaux it was not known where to point to a spot containing a sufficient quantity of ore to warrant the installation of mining machinery. The Government policy complained of may not have benefitted iron ore mining, but it most assuredly promoted iron and steel making, and of the two it is unnecessary to say that the manufacture of the products of iron ore contribute far more, in the number of men employed, in the amount of money paid out, in the capital invested, to the prosperity of the province at large, than the mere mining of the ore. When the Chronicle says that the Government could not have foreseen the effect of its altered policy on the use of native ores, it fails to grasp the fact that not only the Federal but the Local Governments were quite aware that the Dominion Steel Co. was started not with the intention of using the ores of Nova Scotia, but those from its property at Wabana. Had the Government not altered its policy we would not have to-day the large steel works at Sydney, nor a large plant at Sydney Mines. The altered policy must get the credit of being the means of starting the steel industry. When saying all this I still deplore the fact that iron ore mining is at a standstill. While it is well to have steel works using Newfoundland ore, it would be much better if we had works using native ores. And it may be that we may yet mine ore extensively if both Governments alter their policy, if the Local Government will do something to assist in finding the ores, and if when found the Federal Government will make it worth while to develop them."

THE WINNIPEG EXHIBITION.

WHILE it could scarcely be expected that the Winnipeg Exhibition would this year equal the Dominion Exhibition of a year ago, Western Canada's greatest Industrial has scored another success. Winnipeg's Fair occupies the same relative position in the west as the Toronto Exhibition in Ontario, and Fair week is the annual outing of the western farmers, thousands of whom visit the city every year at this time. As it is impracticable to hold the exhibition in the Fall, when the western farmers are busy harvesting and threshing the wheat crop, the Winnipeg Exhibition can not do full justice to the agricultural resources of the country, but, nevertheless, the exhibits of grains and live stock were very creditable, and the prominence of the exhibits of threshing outfits showed the importance of the agricultural interests which are the backbone of the west.

It is to be regretted that the manufacturing and industrial exhibits were not so numerous as in previous years. A number of firms apparently came to an agreement not to exhibit this year, and owing to this shortsighted policy the exhibition was not in some departments so representative as it should have been. This policy is undoubtedly shortsighted, for the benefits derived from attractive exhibits at a big fair, which attracts thousands of visitors, can scarcely be overestimated. The exhibition affords a simple way of obtaining profitable publicity, and all considerations of profit aside, it is an institution deserving the hearty support of all business men.

The exhibition opened on Thursday, July 20, but it was not until Monday that the majority of the industrial exhibits were in place, and even then many of them lacked those finishing touches which were added later.

Dominion Cartridge Co.

The Dominion Cartridge Co. had a tastefully arranged exhibit of cartridges and shells, which did not fail to attract the attention of passers by. The display was arranged in attractive glass cases, and was often pointed out as one of the handsomest exhibits.

Record Foundry & Machine Co.

Although this firm had no separate exhibit, the display of their stoves and ranges constituted the principal feature of the big exhibit of the House Furnishing Co., a new firm about to commence business in a big seven storey building on Portage avenue. R. R. Kinread, the local manager of the Record Foundry & Machine Co., has sold this firm a big order of "Record" stoves and ranges, and a part of the sale was on exhibition at the fair.

Hudson Electrical Supply Co.

This Winnipeg electrical supply firm had a small but tastefully arranged exhibit of electric fixtures and general supplies. It was in charge of Chas. Shipman, the assistant manager of the company.

Pease-Waldon Co., Limited.

The Pease Waldon Co., Limited, secured generous space in the manufacturers' section and made a big display of "Pease Economy" furnaces and "Florence" boilers. The man in charge distributed handsomely printed literature among the crowd illustrating the good points of the Pease line of heating goods. The exhibit was made particularly attractive by the use of palms and the "Made in Canada" sign was prominent.

Jas. Smart Mfg. Co., Limited.

The James Smart Mfg. Co. had a big exhibit of their "Kelsey" warm air generators and furnaces, and literature descriptive of these goods was distributed profusely. But the exhibit was not confined to heating goods—to jump to the opposite extreme, a feature of the display was a fine line of refrigerators. Tools, such as axes and hatchets and lawn mowers, of this firm's manufacture, were prominently displayed.

Clare & Brockest.

Clare & Brockest, the local representatives of Clare Bros. & Co., Preston, Ont., displayed the Clare line of stoves and ranges in attractive style. A big "Born" steel range, which was part of the exhibit, was marked "Sold to R. Adams, Wolseley, Assa." It was a mammoth range which attracted considerable attention.

SUCCESSFUL CONVENTION.

Winnipeg, Man., July 27, 1905.

Although the attendance at the annual meeting of the Western Retail Hardware and Stove Dealers' Association was not so large as at the Winter meeting the convention was nevertheless a pronounced success. Owing to the illness of President Lindsay the chair was taken on Wednesday by A. J. Falconer, and on Thursday by Robert Wyatt. Secretary McRobie's report showed a membership of about 175, although his canvas has only commenced. After a long discussion of the credit evil a resolution was passed recommending the closing of all accounts on November 1st, and the strict maintenance of a cash system until May 1st.

Wm. Gordon, of Winnipeg, gave notice of motion for next meeting that the Manitoba and Western Associations be combined.

After some discussion it was decided to make the Winnipeg retail price list the basis for the association dealers in different localities to add their freight charges after consulting with Secretary McRobie.

The association will meet again in February.

F. R. MUNRO.

Christie Bros. & Co.

Christie Bros. & Co. had a large and very striking exhibit of the stoves, ranges, heaters and furnaces made by the Canadian Heating and Ventilating Co., of Owen Sound, Ont. A big floor space was entirely occupied by this line of heating goods, and the attendant in charge was kept busy distributing literature and explaining the features of the different stoves and ranges. The "Empire King" furnace was a strong feature of the exhibit.

Coltart & Cameron.

Coltart & Cameron, of Winnipeg, had one of the largest exhibits at the fair, and their enterprise was rewarded by the attention which it attracted. A full line of Findlay Bros.' and Copp Bros.' stoves and ranges was on exhibition, and the goods were in charge of those well able to explain their good points. Nickel plated hollow ware, made by the Rome Mfg. Co., and granite ware, made by the Columbian Enameling and Stamping Co., were prominently displayed. The "Paroid" roofing shown by this firm attracted attention among builders, contractors, and hardwaremen. H. E. Kohl, of the Malleable Steel Range Co., South Bend, Ind., was in charge of the exhibit of the malleable steel ranges sold by this firm.

Owen Sound Wire Fence Co.

The Owen Sound Wire Fence Co. made a big display of their Dillon Hinge Stay Fence, and distributed literature referring those interested to their local agents, Caverhill, Learmont & Co.

Winnipeg Paint & Glass Co., Limited.

The Winnipeg Paint & Glass Co., Limited, went to considerable trouble preparing a large and handsome exhibit of the various line which they carry. Ramsay's paints, and Malthoid roofing, manufactured by the Paraffine Paint Co., San Francisco, Cal., were prominent features of the exhibit. Building supplies, sashes and doors were also on exhibition.

Anchor Fence Co.

A small but handsomely arranged exhibit was that of the Anchor Fence Co., showing their various ornamental wire and iron fences and gates.

Merrick, Anderson & Co.

Merrick, Anderson & Co. had a large exhibit devoted exclusively to their "Torrid Zone" steel furnaces, made in Marshalltown, Iowa, and the "Monarch" malleable iron ranges made in Beaver Dam, Wisconsin, by the Malleable Iron Range Co. The exhibit was in charge of P. J. Schwie, who was quite at home explaining the merits of these heaters. Large space was taken in the Manufacturers' Building, and a very attractive display was made.

Munro Wire Works.

The Munro Wire Works made a big exhibit of their various lines, which are now manufactured in their Winnipeg factory. The exhibit was principally confined to the bed springs made by this firm, and the following sign was prominently shown—"The spring that springs and does not sag." Other lines of wire goods were also shown.

Moffatt Stove Co.

This firm made a big display of their stoves, ranges and heaters, on all of which the nickel platings were very prominent, making a particularly attractive exhibit. The Moffatt Stove Co. own the patent in Canada for a new nickeling process, and the superior results of the process were evident in the exhibit. They are paying special attention to the Northwest trade now, and very prominent in their exhibit were a line of "Alberta" heaters specially adapted for the soft coal of Western Canada. Many visitors stopped to admire the handsome "Canada" ranges which, with their bright nickel platings, made a pleasing picture.

Shurly & Dietrich.

In many respects the most attractive exhibit in the Manufacturers' Building was that of Shurly & Dietrich, showing their big line of saws. These were at one end of the building and they were tastefully arranged against a dark background. Signs were neatly painted informing the visitors that "Canada leads

the world in the manufacture of high-class saws."

Stuart Machinery Co.

The Stuart Machinery Co. had a very prominent display of general lines of machinery, machine tools, and power transmission appliances. The Dodge split pulleys occupied a prominent place in the exhibit.

Canadian Iron Wool Co.

The Canadian Iron Wool Co. made an attractive display of pipe and boiler coverings, and heat and cold insulators. A big card bore the device—"The only pipe covering made in Winnipeg."

F. J. C. Fox.

F. J. C. Cox had a display of Alex. McArthur & Co.'s roofing, and also featured prominently the "Induroid" roofing.

Spramotor Co.

The Spramotor Co., of London, Ont., endeavored by means of an exhibit of their goods to persuade the farmers that their use would prevent potato rot. The exhibit attracted considerable attention on Farmers' Day.

Canadian Steel & Wire Co., Limited.

The Canadian Steel & Wire Co., Limited, of Hamilton and Winnipeg, made good use of their opportunity to show the farmers the advantages of their field and hog fences and their farm gates. No pains were spared to make the exhibit attractive and educative.

Winnipeg Ceiling & Roofing Co.

The Winnipeg Ceiling & Roofing Co. made a big display of their ceilings and roofings of their own manufacture. Many visitors were surprised to learn that such high grade ceilings and roofings are "made in Winnipeg."

Gurney Foundry Co.

As usual, the Gurney Foundry Co. had a large and well arranged exhibit of their "Oxford" stoves and ranges. and prominence was also given to their hot air furnaces and radiators. Literature was distributed giving the arguments in favor of the Gurney line of heating goods.

Manitoba Gypsum Co.

The Manitoba Gypsum Co. had an unique exhibit consisting of a miniature house made of their hard wall plaster. It did not fail to excite attention.

A. E. Delins Co.

This firm had a good display of general builders' supplies, asbestos roofing and Monolith sanitary flooring, made by the American Monolith Co., of Milwaukee Wis.

Imperial Oil Co.

A handsome exhibit of lubricating oils was made by the Imperial Oil Co.

BOILER MANUFACTURERS MEET.

ABOUT one hundred and fifty representative boiler manufacturers of Canada and the United States have been in attendance at the 17th annual convention of the American Boiler Manufacturers' Association in Toronto during the past week, the ladies accompanying the delegates being royally entertained by a committee of Toronto ladies, while the delegates transacted the business of the convention. Millions of dollars' worth of plants are represented by those present and the technical subjects discussed have been of the utmost importance to the trade.

One of the association's objects is to secure higher standards of material and workmanship, and thus insure greater safety to the public and to secure the passage of laws making the use of inferior materials a criminal offence.

The associated trades supplying materials to the boiler-making plants also send representatives to the convention and supply a large fund to defray the pleasure features of the gathering. John J. Main, of the Canadian Heine Safety Boiler Co., Toronto, acted as chairman of the local committee having charge of the arrangements, other members being Joseph Wright, W. P. Bull, Wm. J. Guy, Wm. Inglis and T. H. Hamilton.

One really important result of the convention will be the getting together of the American steel manufacturers and the boiler manufacturers, who for some years have been at variance over the quality of steel plates. The A.B.M.A. uniform boiler specifications call for the proportion of sulphur in steel plates exposed to the direct heat of fire or the gases of the combustion not over .025 per cent., but the manufacturers objected to being bound to furnish this grade and thought the boilermen should be satisfied with .035. The boilermakers were willing to recede to .030, but the steel manufacturers have still held out to make it .035. The outcome will likely be a conference between the bodies interested. A committee was appointed to bring this about and have a closer agreement as to the chemical elements of steel and the quality to be furnished by the plate makers. But for the combination, individual plate makers would concede to produce the .025 quality. The quality of steel differs under the conditions of fuel and the places where it is manufactured, and the boilermen do not want the lowest quality to grade the steel. If a plate gives way the boiler manufacturers are held responsible, so they want to maintain the quality of the steel and think if they insist on it they will get it. Although it was argued that the steel men would not sacrifice quality to quantity, it was thought that the cheaper trade was catered to.

Gen. E. D. Meier presented the report of the committee on uniform boiler inspections, reviewing several years' hard work at Washington, endeavoring to get a commission appointed to straighten out the tangle of inspection laws. The Slocum disaster has been a weapon in the committee's hands. The federal laws apply to marine boilers, but the same legislation is reflected in the acts of states and municipalities with regard to land boilers.

John J. Main, of Toronto, told the convention that Canadian manufacturers were affected by the United States laws, and that conditions in Canada itself with regard to boiler inspection might be improved.

Officers were elected as follows: R. Munroe, jr., Pittsburg, Pa., president; J. D. Farasey, Cleveland, O., secretary; Joseph Wangler, St. Louis, Mo., treasurer; M. F. Cole, Newman, Ga., first vice-president; John J. Main, Toronto, second vice-president; John Rourke, of Savannah, third; J. Don Smith, of Charleston, fourth, and G. H. Kittoe, of Aurora, Ill., fifth. The association meets next year in Pittsburg.

The convention closed on Thursday, a banquet being held at the King Edward Hotel in the evening, at which Messrs. W. P. Bull and J. J. Main, of the Canadian delegation, made interesting addresses.

PERSONAL MENTION.

A new hardware store is being opened at Frank, Alta., by Cribbs & Randell.

S. J. Frame, of Jenkins & Hardy, Toronto, is holidaying at Atlantic City.

S. P. Gourlay, plumber, St. Catharines, called on Toronto jobbers this week.

Mr. A. H. Campbell, of A. C. Leslie & Co., of Montreal, spent a few days in Ottawa this week.

Mr. W. Kirkland, of the Kennedy Hardware Co., Toronto, is spending his holidays in New York.

Mr. T. H. Newman, of Caverhill, Learmont & Co., was in Ottawa one day this week on business.

Mr. J. H. Meikle, member of the staff of Caverhill, Learmont & Co., is visiting friends at Rose Point, Ont.

Mr. S. R. Brewer, of the Thos. Robertson & Co., of Montreal, is spending his vacation at Point Au Chene.

Mr. G. A. Kohl, of B. & S. H. Thompson & Co., Montreal, spent a day in the old capital this week on business.

Mr. W. B. Dalton, hardware merchant, of Kingston, Ont., called on the paint and oil trade of Montreal this week.

Mr. Allan Munro, of the Canada Paint Co., of Montreal, is intending to spend his vacation by taking a trip to Glasgow, Scotland.

Mr. Franklin S. Saunders, of the Franklin Saunders Co., of London, England, was a visitor at their Montreal office last week.

Mr. W. G. Jones, treasurer of the Pease Foundry Co., Toronto, who has been in Winnipeg for the last fortnight, returned east on Tuesday night.

Mr. W. A. Woods, of the staff of Caverhill, Learmont & Co., of Montreal, is spending his vacation up in the mountains surrounding St. Agathe, Que.

Mr. W. J. Thompson, the Toronto representative of Caverhill, Learmont & Co., of Montreal, was a visitor to the last named city for a few days this week.

Mr. John McKay, Chatsworth, has purchased the hardware stock of the late George W. Little from Mr. M. McGill, who purchased it from Mr. George McFarlane.

Mr. Geo. R. Munro, of the Canada Paint Co., was in Montreal for a few days this week. Mr. Munro was preparing his samples for another trip on the road.

Mr. E. H. Smith, of the financial department of Lewis Bros., Limited, Montreal, is spending his vacation on a paddling trip up the Rideau Canal and the Ottawa River, returning by the St. Lawrence.

Mr. J. B. Reade, of H. S. Howland, Sons & Co., is spending his vacation at Cleveland, Ohio, while Mr. C. B. Bartlam, of the staff of the same company, is gathering fresh vigor at the Muskoka Lakes.

Mr. H. V. Lawlor, traveling representative in the west for Henderson & Potts Co., Limited, returned to Winnipeg last week from an extended trip on the C.P.R. main line west and as far north as Edmonton. The trip was highly successful as the orders obtained show. This week he has been entertaining the firm's customers at the Exhibition in his own popular style.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 62.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 28, 1905.

MAJORITY of local wholesale hardware houses have withdrawn their travellers from the road and as these people are not cultivating the outside trade, conditions with them are quiet. One or two houses, however, who have not as yet taken their travellers off of the road, report trade as being good, in fact, much better than at this time last year. One wholesale jobber went so far as to say that trade of last week was as good and as brisk as at the busiest season of last year. This speaks well for the trade and no doubt Fall trade will be very active when it once gets under full headway. General builders' hardware has a fair demand. Hand saws, which were unsteady last week, have become much firmer. This change has inspired more confidence in the trade and better and larger orders are the result.

Canadian cement has advanced a little on previous figures. Prices have become firm since the recent change and another advance would not surprise the local dealers. Blacksmith's supplies are beginning to sell better and orders have been received in large numbers.

As this is what is generally termed "the between season," orders are not as large as they might be and it is easily seen that retail merchants are not purchasing anything more than is absolutely necessary, until they find if any changes are likely to occur.

Axes—Orders, for Fall shipment, are being received more freely. As a good season is now approaching the demand is expected to increase. Prices although firm continue unchanged. We quote: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Like axes the trade in handles is improving and better things are expected shortly. Our quotations are as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—A great competition has been in progress for some time and this has kept trade wonderfully active. Good prices are being realized on all sales. We quote: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—Jobbers report a quiet trade. No attempt is being made to cultivate or strengthen the trade. Our quotations are as follows: Cold blast, $4.50; No. 0 Safety, $3.50.

Barb Wire—Orders have nearly all gone forward and trade will be quiet until the beginning of next season. Prices are steady and continue unchanged. Our quotations are as follows: $2.75 for 100 lbs. f. o. b. Montreal; $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—The forwarding of all orders has concluded on this market also. Trade has become much quieter. This is only natural as the season has drawn to a close. Our quotations are as follows: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—A steady trade and a fair demand are the principal features on this market. We quote as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Well assorted orders calling for small quantities of each size are arriving very freely. Trade is expected to remain like this during the rest of the season. We quote: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts— Local dealers in these goods report a good trade. A brisk demand is in progress and some large orders have been booked. Trade has a decided tendency to be steady with firm prices. Our quotations are: Three-eighths and smaller, 60 to 10; seven-sixteenths and larger 55 to 5. Activity rules.

Wire Nails—Prices have become steady and the demand has become more active. The outlook is good, especially for trade in the western part of the Dominion. We quote as follows: $2.10 to $2.20 a keg f.o.b. Montreal.

Cut Nails—No change has taken place. Prices of last week hold firm and steady. Our quotations are as follows: $2.20 a keg f.o.b. Montreal.

Horseshoes—Blacksmiths throughout the country are beginning to stock up their Fall and Winter supplies, so that orders have increased materially during the week. Prices are very firm, but no change is anticipated. Our quotations are as follows: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all sizes 0 to 4, $5.50; toe weight, all sizes 1 to 4. $6.75. Packing—Up to three sizes in a keg ten cents per hundred pounds. More than three sizes twenty-five cents.

Horse Nails—Trade has become more active and is expected to brighten up still more within the next few days.

Sporting Goods—Few orders are arriving, although local jobbers are busily engaged forwarding shipments. Prices are firm and steady. No change is anticipated. We quote as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax

Building Paper—Manufacturers report a steady trade. Prices are unchanged.

Cordage—This market has become somewhat quieter. Binder twine, which has been the special feature, has deadened owing to the close of the season.

Cement and Firebrick—Very few large orders have been booked this year. Small jobbing orders are plentiful, but these are all local. Dealers are storing up large quantities of imported firebricks in view of a good trade this Fall. During the week Canadian Portland cement advanced 5c. per barrel. Prices on this cement are very firm and another advance may occur. Other prices continue unchanged. Our quotations are as follows: English cement, $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—No change is prevalent. Prices are steady. Our quotations are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Green Wire Cloth— The season has now closed and with the exception of a few assorting up orders, trade is quiet.

Poultry Netting—Jobbers report a quiet trade. A few small orders have been received for certain sizes, which are hard to obtain. Our quotations are as follows: Discounts for two inch nineteen gauge standard, and sixteen

gauge extras, at 60 per cent.; finer meshes, 55 per cent.

Spring Hinges—Orders have become scarce. Retail merchants are well stocked and trade will be quiet until next spring. We quote: No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—Orders continue to arrive very freely. Local wholesale hardware houses report the volume of business this year much better than in previous years. Figures quoted below are firm. No change is anticipated, the market being steady. We quote the following prices: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Cherry Seeders—A good demand has sprung up for cherry seeders. Prices range from $7.50 to $12.00.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, July 28, 1905.

A SLIGHT slackening off is reported owing to the Mid-summer holiday season, the travelers being off the road, and farmers being too busy to place much business. The jobbers, however, are receiving a large volume of letter orders, and shipments being made are larger than usual at this season. Business from the west is very heavy and from all points optimistic reports are being received of a bountiful harvest.

Despite the lateness of the season, the demand for haying tools has kept up briskly, other goods being in marked demand being cherry stoners, preserving kettles, fruit slicers, and other articles used in the kitchen during the fruit season. Last week's prices remain unchanged.

Sporting Goods—Business is increasing and there is a good demand for guns and ammunition. A good season is expected.

Washing Machines—Trade is satisfactory for this season.

Chain—No change is reported in trade conditions. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Dealers are well satisfied with their sales. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Business is good at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demand continues active and more goods are moving than expected during the Summer season. The same prices rule.

Barb Wire—Demand is reported good and country merchants are ordering in fair quantity.

Wire Nails—Business remains firm. Nominal quotations are $2.25 f.o.b. Toronto.

Cut Nails—Trade continues satisfactory. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Trade is particularly good for this season. We quote as follows: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—A seasonable trade is noted. Prices are the same.

Screws—Business being done is reported large, but stocks are satisfactory. The strong demand keeps prices firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—Trade continues brisk and the warm weather has not decreased the demand materially. Prices continue steady.

Cordage—Sorting up orders are being received in fair quantity. We quote: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—Present quotations are firm with a further advance looked for next month. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Business is brisk, demand being strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper—The general activity in building circles has resulted in a good business being done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool.

Trade in hides and wool is light as usual at this season and there are very few changes to record in the market. Sheep skins have been crossed from our list and rejections added, which are bringing 20c. Unwashed and wool washed fleece are each up 1c. this week. We quote as follows:

Hides, No. 1 green steers, per lb	0 10	
" " 2 " " "	0 09	
" No. 1 green, per lb	0 09½	
" " 2 " "	0 08½	
Country hides, flats, per lb	0 08½	0 08¾
Calf skins, No. 1, selected	0 10	
" " No. 2	0 08	
Lamb skins, each	0 55	
Shorn pelts "	0 45	
Rendered tallow, per lb	0 04	0 04½
Unwashed wool, new clip, per lb	0 16	
Wool-washed fleece	0 26	
Rejections	0 20	
Pulled wools, super, per lb	0 21	0 23
" " extra	0 22	0 24

For Manitoba, British Columbia and Maritime Province markets see following pages.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 28, 1905.

WITHIN the past week or ten days the market has assumed a much better appearance. Indeed, orders are being booked which, judging from the appearance of the market at the opening of the season, one would have thought almost impossible. The most favorable report is the heavy bookings of foreign pig iron in the west, especially in the centre and western part of Ontario. Scotch pig iron is in strong demand, the talk this Spring respecting the poor value of imported iron as compared with our own production, being considered street gossip. The largest orders which have been booked this week are those secured from large founders who purpose using the imported article with the home product for welding purposes.

The market in raw metals has attained a very firm appearance, much firmer than in any recent years. Reasons for the continued advance are numerous, but the most likely is the heavy demand. In one or two cases, such as copper, it may be a manipulation of the market, but this is the only case known where these conditions are supposed to exist. The many ways in which galvanized iron and Canada plates may be used to-day has caused a demand which, in volume, is greater than in any previous year.

Pig Iron—Larger orders are being booked and trade, especially in the foreign product, has a much better appearance. Prices are firm, but no change is expected. Our quotations are:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18.00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.50 to 19.00	delivered	Montreal.
Clarence No. 1	17.50	"	"
" No. 3	17.00	"	"
No. Cleveland	17.50	"	"

Bar Iron—Blacksmiths throughout the country districts are now beginning to stock up for Fall and Winter use, so that orders received this week are much larger and more numerous. We quote: Merchant bar, $1.80; horse-shoe iron, $2.02 1-2; forged iron, $2.05; best refined iron, $2.20 net cash thirty days.

Tool Steel—Trade shows a slight improvement, and with the passing of a few weeks larger orders are expected to be booked. Prices are firm and steady. We quote: Colonial and Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—No change has as yet taken place on this market. Prices are steady and the demand remains nominal. We quote: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.10; reeled machinery steel, $2.75; mild, $2

Direct Importers of:

Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc., etc

and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—The demand is showing no let up, and dealers are looking forward to a record breaking business before the closing of navigation. Prices show a decided tendency to remain steady. Our quotations are as follows: Cold-rolled shafting, 3-4 inch to 17-16, $3.85 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Canada Plates—Orders booked this year show a large increase over previous years. Jobbers find they have to hustle in order to fill all orders on time. Prices are firm but no change is expected. We quote: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized, 52's, $3.90 to $4; 60's, $4.15 to $4.25.

Galvanized Iron—An active demand is still in progress. The demand is increasing, which will make prices much firmer. Our quotations are as follows: Queen's Head, 28 gauge, $4.15; 26 gauge $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra

Black Sheets—Trade remains steady and unchanged. Our quotations are: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—The firmness of the market and the scarcity of the article has resulted in many prices being quoted. The figures quoted below, however, seem to be the most accurate. We quote: 13½ to 14½c.

Sheet Zinc—Prices have become firm at the advanced price owing to the scarcity of the spelter. Another advance may occur if conditions do not change. Our quotations are: Cask lots, $7.25; small lots, $7.50.

Tin Plates—The demand has become more active and a good trade is in progress. We quote the following: Cokes, $3.75; charcoal, $4.

Ingot Tin—Owing to the limited output of this metal conditions have become much firmer. A scarcity of labor at the mines is another reason for the change. An advance is said to have taken place at the mines, but as yet no change has occurred on this market. Prices are very firm, and this advance may take place any time. We quote: 34 to 34½c. per lb.

Ingot Copper—Copper still continues to be firm, and although no change has occurred on the price list, prices have become much firmer. We quote the following: 16 to 16¼c.

Ingot Zinc—It is reported that there is a scarcity of the spelter. Such a report as this will doubtless have some effect on the prices. Prices are very firm, and the slightest change may mean an advance. Our quotations are: 6¼ to 6½c.

Pig Lead—Pig lead continues very firm. Orders are being booked but the market shows an absence of confidence which may affect it at a later date. We quote the following: $3.75 to $4 per 100 lbs.

Boiler Tubes—Demand continues to be steady. Prices are firm and unchanged. Our quotations are as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12 1-4; 3 1-2 inch, 16c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Scrap Metal—Warm weather still continues to affect the market and orders from the foundries have fallen off to a noticeable extent. No change is expected until the cooler weather sets in, when larger orders are expected. Our quotations are as follows: Heavy copper and wire, 12 3-4c.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to 9c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove-plate scrap, $9; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-2 to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, July 28, 1905.

ADVANCING prices continue to be reported this week, showing a rise of 1 cent on tin, a slight increase on pig lead, and another half cent jump on antimony. Although the Summer season tends to a slackening off there is a general activity noted, buying being heavy on account of the advancing prices. The foreign tin plate markets are strong, and this has a strong influence on the local market. Lead is very scarce and it is difficult to secure it in any quantity. Iron is fairly active with copper unchanged.

Pig Iron—A good business is reported as being done, prices being steady.

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "		18 50
" No. 2, "		18 00
Radnor, at furnace		30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Orders are being booked in fair quantity, the trade for this season being very satisfactory. Our quotations are as follows: $1.85 f.o.b. Toronto, with discount of 2 per cent.; for extras as cut to length, while rolling, 2 feet and over, 10c. per 100 lbs., 1 foot and under 2 feet, 15c.; under 1 foot, 20c.; over 20 feet, by special agreement according to length and size.

Tin—Prices have advanced in sympathy with the rise in foreign markets. We quote: 35c. to 36c. per lb.

Tin Plates — Outside markets are strong and local conditions are a reflex.

Galvanized Plates—Trade is a trifle quieter.

Brass—Conditions are unchanged, business being fairly active. Discounts continue at 10 per cent.

Lead—The market is bare of stock and demand very active. Prices have advanced slightly and are very firm. We quote: Pig lead, $4.00 per 100 lb., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—An average trade is being done. Prices are steady. We quote as follows:, 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—A large trade is doing and quotations are unchanged. Our quotations are as follows: Ingot copper, 15 3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—Trade is active and prices have advanced another half cent. A large volume of business reported. Our quotation is 14 1-2c.

Old Material—Lead, copper and brass are all active, but business generally is quiet. Dealers' buying prices are: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Dealers' stocks are well in hand, preparatory to the Fall rush of business. We quote: Anthracite in cars at bridges: Grate, $5.05 per gross ton; egg, stove and nut, $5.30 per gross ton; pea, $3.70 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, July 26, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 47s., and Scotch warrants at 49s. 4d., making prices as compared with last week 1s. 7 1-2d. higher for Middleboro and unchanged for Scotch warrants.

Tin—Spot tin opened strong at £150 10s., futures at £149 17s. 6d., and after sales of 180 tons of spot and 370 tons of futures closed strong at £150 15s. for spot and £149 17s. 6d. for futures, making price as compared with last week £6 7s. 7d. higher on spot and £6 10s. higher on futures.

Copper—Spot copper opened easy at £67 12s. 6d., futures £67 17s. 6d., and after sales of 200 tons of spot and 400 tons of futures closed firm at £67 15s. for spot and £68 for futures, making price as compared with last week 15s. higher on spot and 12s. 6d. higher on futures.

Lead—The market closed at £14, making price as compared with last week 5s. higher.

Spelter—The market closed at £23 15s. making price as compared with last week 5s. lower.

UNITED STATES METAL MARKET.

Advance proofs furnished HARDWARE AND METAL by The Iron Age, July 27, 1905.

THERE has been an active movement in many branches of the iron and steel trades, and manufacturers are facing the future with increasing confidence.

Apparently the buying in pig iron is over for the present. It stopped rather abruptly in the east with the end of last week, and there is a breathing spell in the Cincinnati market. It is estimated that the total sales during the two weeks of lively purchasing will aggregate about 500,000 tons for the whole country, the great bulk of the business having been for delivery during the next 60 and 90 days. It has led southern makers who had sold between the range of $10.50 and $11.25 to advance their prices to $11.75 to $12 for No. 2 at Birmingham, some of them holding for more. This has given the northern and eastern producers the chance to book considerable business at their old asking prices, at which they were marketing very little. In other words, the market is steady and firm after the rush of buying instead of being weak and nominal, as it was before it.

Relatively very little has been done in Bessemer pig in the valleys and the hope has been expressed that the leading interest might enter the market. This is not likely for the next few months, and it should be observed also that a large outside steel company in the central west is carrying quite a stock of Bessemer pig.

A somewhat curious phenomenon is the appearance as buyers of steel billets of a number of large steel works, the tonnage wanted in the open market running close to 30,000 tons. The explanation may be that what is wanted is open hearth steel, of which the steel works in question make relatively small quantities.

A number of railroads have bought steel rails during the last ten days, the total figuring up close to 100,000 tons. Included in the purchases is from 25,000 to 30,000 tons of the Missouri Pacific system, 17,000 tons for the Spokane International, 12,000 tons for the Kansas City Southern, 6,000 tons for the St. Louis & Southwestern, and 5,000 tons for the Somerset Railway. The fact that the mills have a heavy tonnage makes them indifferent to business in light rails unless prices are better, and the market in this branch is firmer at $23 to $25.

An interesting inquiry is that which has come to the coast shipyards for two large boats for the Pacific. The Atlantic Coast yards have been so hungry for so long a time that this indication of a flow of work is very encouraging. The boats will need 8,000 tons of steel, but there will be some difficulty in getting the shapes in time.

In the structural trade the question of deliveries is the all absorbing topic. A tidewater fabrication shop has just placed an order for upward of 15,000 tons of shapes, about 5,000 tons of which is to be applied to export requirements. Bids for the new bridge across the East River are to be opened on August 10. The tonnage involved is a little short of 42,000 net tons.

During the past ten days there has been some heavy selling of steel bars. One interest has booked 70,000 tons, largely for makers of agricultural machinery. It has been noted, however,

that a somewhat unusual quantity of spring steel bars has been called for, thus reflecting the activity in the car building industry.

The wire trade is stirring a little. The usual time for the replenishing of requirements by the jobbing and other interests is August 15. The buying spell may set in as early as August 1 this year.

MINES AND MINERALS.

Three men were killed in a explosion of dynamite in the Bank Head mine at Banff last week.

* * *

The C.P.R. is to extend its trackage at the coal towns of Frank, Blairmore and Coleman, Alberta.

* * *

A new mining district near Lake St. John, in Northern Quebec, is reported to be rich in gold, copper, asbestos and iron ore.

* * *

A rich strike of copper ore, said to run from $60 to $90 per ton, has been made in the Britannia mine workings near Vancouver.

* * *

Two new furnaces will be in operation at the Granby Smelter after August 1, and the output of ore for the Boundary District for 1905 is certain to exceed 1,000,000 tons. Up to June 30 the tonnage was 450,000.

The Dominion Coal Co., according to a Halifax dispatch, is to re-open operations on the Emery seam of the reserve colliery which produced 800,000 tons last year, the largest of any single colliery in the world. The output will be increased to 1,000,000 tons per year.

* * *

The development of the LeTete copper mine at LeTete, N.B., continues to show very promising conditions. At the 200 foot level porphyry took the place of quartz, and a level driven 155 feet at that point has both hanging and foot walls of the former rock. It may be mentioned that porphyry is the gangue rock of many of the large copper mines of the United States. The LeTete ore is rich and easy smelting.

* * *

The rail mill of the Dominion Iron & Steel Co., at Sydney, has been put on double shift for the first time since it began operations. In consequence of this its output now will be about doubled. The rod and blooming mills are also on double shift, and the entire plant is a scene of activity. There are more men employed on the plant now than at any time since it was started. Shipments of rails and rods are made daily to Quebec and Ontario markets.

* * *

A hydraulic system of coal mining is to be tried by the Dominion Coal Co. At present demonstrations are being carried on at Dominion No. 2 with a hydraulic cartridge machine containing a row of telescopic pistons at one end and a small pump at the other. After the coal is cut out underneath the machine is operated parallel with and near the top of the roof. The action of the pump forces the water along a tube where it comes in contact with the pistons. There it penetrates the coal in a downward direction, and as the pressure increases the coal begins to fall to the floor. The use of the machine does away with explosives, and produces the coal in the best possible condition, with equal speed and greater economy than under the old system. By the use of this apparatus and with the safety lamps which will replace the "clanny" in the mine, the probability of an explosion will be reduced to a minimum.

News from the Capital.

Ottawa, July 26, 1905.

THE bill prohibiting the use of trading stamps passed both houses of parliament and becomes law on November 1 next. It will be a criminal offence to issue them, punishable by heavy fines.

There was considerable opposition to the measure in the Commons. In the Senate also the bill was strenuously opposed. One Senator spoke against the bill for several hours. It is said that it was the intention of those favoring the trading stamp interests to "talk" the bill out of the Senate. The House of Commons had adjourned and the members were beginning to leave for their homes. The Senate was not ready for prorogation, on account of the prolonged criticism of the bill. For a time it looked somewhat as if, in order to facilitate prorogation, the bill would be laid aside for the present session. But the Government flatly refused to go on with prorogation till the bill was disposed of in the Upper House, and also refused to grant the Senators any pay—with their increased allowances for the present session.

LAST MINUTE PAINT MARKETS

Office of
HARDWARE AND METAL
Montreal, July 27, 1905.

Turpentine has declined 2 cents per gallon, making the price now at 88c. per single barrel, and 87 cents for two and four barrel lots.

Furthermore, a Senator supporting the bill suggested that an amendment be brought in making the measure even more severe than it was. The opponents of the bill took the hint, and it was scon given its third reading in the Senate in practically the same form as when presented to the House of Commons several days ago. The new law is an amendment to the criminal code.

The trading stamp people, it is understood, are making active preparations to fight the measure in the law courts. They claim that the legislation is an "illegal restraint of trade." They will demand $200,000 damages. It will be remembered that the Minister of Justice said the legislation was of a novel character. The bill was opposed by several members in the House, and a number of those who did not oppose it regarded it as unworkable in some respects. The legal fight will consequently be watched with a good deal of interest

Business in Ottawa during the past month has been exceedingly quiet, but prospects at present point to a very brisk Fall trade, especially in builders' hardware. Stoves and ranges will also have a heavy call ranges will also have a heavy call.

The strike of the plumbers and steamfitters in the city has been settled. The men went out about three or four weeks ago. They were receiving 28c. per hour, and demanded 32c., with Saturday afternoons off. This was not acceded to by the master plumbers. Before going out on strike the men offered to settle the matter by reducing their demand to 30c. per hour. This also the master plumbers at first refused, but last week they signed, giving 30c. per hour. Everything is now running smoothly, there being lots of work in the plumbing line. The strike throughout was conducted in a very gentlemanly manner.

GUELPH COMPANY INCORPORATED

THE business that has been conducted so successfully for the past forty years under the name of J. M. Bond & Co., Guelph, will henceforth be known as the Bond Hardware Co., Limited. This well-known firm have attained a reputation that extends not only throughout Canada, but is well and favorably known to the leading manufacturers of Great Britain and the United States.

Mr. J. M. Bond, the founder of the business, came to Guelph in 1866 with a thorough knowledge of his chosen occupation and a splendid adaptability for it. He established and has since conducted the business under his own name and through his own integrity and business application has developed it into one of the most substantial concerns in Canada.

Mr. Bond has decided to retire from active business, allowing those who have been identified with him in the growth of the house to carry it on. His decision to take matters easier in the future will be gratifying to his many friends. He has indeed earned a respite from active labor. Through the years that have witnessed the development of his business he has given unremitting attention to its every detail, and he quits his desk with the satisfaction that success, honorably won, always affords to those who achieve it, and carrying with him the confidence and high esteem of his fellow citizens.

Those particularly interested in this change are well known, being Mr. W. G. Bond, brother of Mr. John M. Bond, and who has been connected with the business almost since its establishment, and who is to-day one of the best-posted hardwaremen in Canada; Mr. T. A. Keating, for the past 18 years chief of the traveling staff for John M. Bond & Co., after a number of years spent in both the wholesale and retail departments of the hardware business; Mr. J. S. Millar, who has been connected with Mr. Bond's office department for the past 15 years, since 1898 as accountant and confidential clerk with Mr. Bond, in the management of his business.

The new firm enters upon its career under the brightest circumstances, and its success is practically assured. Mr. J. M. Bond will be president.

The Labelle Chemical Products Co., of Labelle, Que., have secured from the Provincial Government 6,500 acres of timber lands on the shores of Lake Labelle, and they will now commence the erection of their extensive works for the production of wood alcohol, acetic acid, tar, etc.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

YEARLY CONTRACT RATES.

100 words	each insertion,	1 year	$30 00
"	"	6 months	17 00
"	"	3 months	10 00
50	"	1 year	17 00
"	"	6 months	10 00
25	"	1 year	10 00

WANTED.

GOOD hardware clerk, one who has a knowledge of book-keeping and stock-keeping. Address Box 269, North Bay. (31)

WANTED a steam shovel cranesman; accustomed to both friction and all-steam machines. M. A. Pigott & Co., Goderich. (f)

TINSMITH wanted at once; first-class man; work the year round; must be temperate. Apply Jacob Eyer & Son, Richmond Hill. (f)

WANTED first-class shingle sawyer for swing machine; steady work. Apply to Lock Box 95, Owen Sound. (f)

WANTED foreman for planers and stickers; sticker hand, also sash and door men. Gold Medal Furniture Mfg. Co., Toronto. (f)

WANTED by traveler who is expert on gasoline engines; position in the east; engaged until Sept. 1. Apply Box 16, Sun, Brandon, Man. (f)

BUSINESS CHANCES.

IF you wish to buy or sell a business anywhere in Western Canada, it will pay you to communicate with us. We have some good legitimate propositions on our list; handle nothing else. Address The Business Brokers, 611 McIntyre Block, Winnipeg, Man. (tf)

MANUFACTURERS' AGENT WANTED.

A LARGE firm of bedstead manufacturers in Birmingham, Eng., are open to engage an agent in Canada for the sale of their goods. Address Box 254, HARDWARE AND METAL, Toronto. (tf)

TRAVELERS WANTED.

AN experienced hardware traveler; state experience and with whom employed. Address Box 216, Montreal. (30)

A MIDDLE-AGED gentleman of good address is wanted to call on the trade in Ontario. No samples to carry. A very good opening for a retired or retiring general merchant who desires a light, healthy occupation with good remuneration if successful. Give references. Box 260 HARDWARE AND METAL, Toronto. (25tf)

HARDWARE travelers wanted for Maritime Provinces, Quebec, Ontario and Manitoba; must be able to invest from $500 to $1,000 each; old, reliable house; connection well established. Box 265, HARDWARE AND METAL. (32)

Nova Scotia Trade News

Halifax, N.S., July 25, 1905.

TRADE continues fairly active for the season of the year. Jobbers say that business is up to expectations. This is looked upon as the dull season in the hardware business, but dealers are not complaining. Collections are considered to be pretty good, and are improving. Prices, generally speaking, are steady, and no change of special note has occurred since last report. At the present time jobbers do not care to quote prices on turpentine and oils, as the market is fluctuating so. Contractors' and mill supplies are selling freely, and large sales of haying tools have been made during the week. The hay crop throughout the whole province is reported to be the best for years, and consequently the demand for scythes, rakes, forks, etc., is good.

The hardware association has not yet completed the revision of its price list and will not likely do so for some days. An effort is being made to have glass, bar iron, and sheet iron listed, and it is likely that these articles will be affixed on the list. Heretofore these articles were sold at varying prices, and the effort now put forth is to bring about some uniformity. The suggestion, however, has not met with universal favor, but the hope is held out that all will fall into line.

The appraisement of the loss on the hardware building of George E. Smith has been fixed at $999.30. The appraisers are still at work on the stock.

Rail laying on the Victoria Beach Railway in the western part of the province is held up for the want of material, which was ordered months ago.

The Nova Scotia Steel Co. are making large shipments daily from Sydney to points in Upper Canada. On Thursday last eighteen carloads were sent forward, and on the following day twenty-two carloads were sent out. The shipments are principally steel billets, although there is quite a lot of pig iron, steel rails and wire rods. The steel rails are consigned to the G.T.R., Montreal, but nearly all the rest are for Ontario points.

British Columbia Trade News

Vancouver, July 20, 1905.

VERY keen interest is being displayed among lumbermen in this province over the announcement of the probability that the United States Government may remove the duty on lumber, admitting it free into the republic. While the action might have the effect of bringing a number of American millmen to this province to build mills, it is felt by the local millmen that the greatest benefit would arise from the stimulation to the lumber trade, as there would then be opened the great markets of the middle west and even of the eastern states, now closed because of the tariff. Were this to happen, the millmen would feel so well satisfied that it is doubtful if they would longer demand that a duty be placed on lumber imported into Canada. That some such move is possible, is indicated by the fact that so many Americans have been investing in timber lands in this province during the past two years. This season there is even greater activity among the Cousin Jonathans to come over and share in the forest wealth of the province by the Pacific.

* * *

The tie-up of the Nanaimo coal mines is now complete. The machine shops, blacksmith shops, etc., have been closed down by order of the management. It is said that the work on the bunkers and conveyors at Brechin, the company's other mine, will cease at the end of the month. The men have accepted the offer of Deputy Minister of Labor Mackenzie King to arbitrate the matter, but the owners have not yet made any decision; but from the latest move it would look as if they did not intend to fall in line, as it would mean recognition of the United Mine Workers, which is the bone of contention now. Meanwhile the effects on Nanaimo City and the business interests centred there are simply disastrous. It spells ruin to many of those now in business there.

* * *

Following the electrification of the Lulu Island branch of the C.P.R. and its operation under lease by the B. C Electric Railway Co., comes the lighting of Steveston, the salmon town at the mouth of the Fraser, by electricity. The "juice" was turned on for the first time a week ago, and was very satisfactory. All the forty-odd canneries along the river at Steveston will install lights, and some of them will put in motors, discarding steam power for operating the plant. Private houses, hotels, etc., are all being wired for the light, its use promising to become general at once.

* * *

Another project outlined by Managing Director Buntzen on the occasion of his departure to take up his residence in London, is that of putting a road along the Fraser, possibly connecting New Westminster with Steveston. Already residents of the rural municipality of Richmond, through which the Vancouver-Steveston line runs, are asking for a branch from Eburne, so that would be a beginning of the larger project.

* * *

Up in the Okanagan, D. R. Young is out with a plan to utilize the power from Shuswap Falls for an electric tramway to Vernon from Lumby, serving an important and growing rural district. He also plans to supply power and light service. There has been considerable capital stock subscribed for, and engineers are to go into details of the plans within a fortnight.

* * *

Not content with tapping the Similkameen district via Spence's Bridge and Nicola, the C.P.R. projects a line from Grand Forks, up Kettle River valley and across by way of Fire valley, on the east side of the Okanagan Lake, to Nicola. Work on the Spence's Bridge-Nicola branch is being vigorously pushed. The contractors are picking up all the men round the coast cities, who are willing to work, and sending them up to Spence's Bridge, which is the base of operations. The little town on the C.P.R., which has hitherto been famed as the best spot to grow tomatoes in the open air in the lower mainland, is now a booming construction town, and is growing fast. Every business man is doing a rushing business, and not only are crowds of railway men there, but

the construction of the line is attracting many who wish to get into the country to settle.

* * *

The Great Northern are pushing their branch into the Similkameen, and expectations are that the line will reach Princeton early this Fall. The company have a survey party out, under the direction of Engineer A. E. Baldwin, an eminent engineer, who has had experience in seeking passes through the Sierras of South America, to find a pass or route across the Hope mountains, hitherto an unsolved problem to railway men seeking the shortest route from southern interior of British Columbia to the coast. A party under Engineer Tracy will follow Mr. Baldwin up the Tulameen River, making a preliminary survey for the line. This would indicate that the Great Northern plans do not stop with the extension of their boundary branch into the Similkameen.

* * *

Mining in the interior of British Columbia is becoming satisfactorily active. Many properties are now being worked at a profit, and a number of very important transactions have been completed in mining transfers recently. The Slocan is beginning to waken up again, and hopes of the restoration of that famous silver-lead district to its former prosperity are beginning to loom up. The Hewitt mine near Silverton, on Slocan Lake was sold the other day for a large sum, and the purchase price is said to have been paid in cash. In the boundary camps progress is shown all along. One mine, the Sally, on the west fork of Kettle River, above Greenwood, received over $200 per ton returns from a 20-ton shipment. Fifty tons more, equally as good, are ready for shipment.

* * *

In the Kaslo section of the Kootenays the zinc ores of many mines are turning out well. The lessees of the Bell mine, in White water, are taking out ore rich in silver values and carrying well over 50 per cent. of zinc. The reduction plant at Rosbery on Slocan Lake is working, and the zinc smelter of the Canadian Metals Co., at Frank, on the Crow's Nest Pass Railway, is rapidly approaching completion.

* * *

On the coast, the Britannia Mine at Howe Sound, near Vancouver, is being developed rapidly, the machinery, tramway, and concentrator all being in working shape. Mr. Geo. H. Robinson, the eminent mining engineer, who is chief owner and to whom is due the credit of going ahead with a proposition which lay dormant for years, is expected to arrive in a day or so. Then the shipments of ore will begin and regularly there will be a stated tonnage sent to the Crofton smelter on Vancouver Island. Mr. Robinson has purchased this smelter as a private enterprise, and will handle the ore from the Britannia. The bunkers of the mine are now being filled with crushed ore, in readiness for shipping to begin.

* * *

The parties holding oil licenses in Southeast Kootenay must renew on Aug. 2, if they wish to hold their oil lands. The Flathead country in Alberta, just across the line, is being developed somewhat, though transportation is still extremely difficult.

New trade and added profits await dealers who handle "Empire" Metallic Shingles and go out among their townsmen who contemplate building, determined to have their orders.

Many people keep right on using old fashioned wood shingles from sheer force of habit, no one having taken the trouble to show them the advantages of "Metallic" Shingles over wood. Don't you think you can convince some of them of the fireproof, lightning proof, storm proof and rust resisting qualities of "Empire Shingles and put some profits into your pocket that now go to competitors? The facts are so self evident that it requires a minimum selling effort to get many good orders for "Metallic" building materials.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto, Canada 305

We also manufacture:
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, Etc.)
"Impervia" Fireproof Windows
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Eastlake" Metallic Shingles
"Metallic" Eavetroughs and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 28, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

EXHIBITION week has brought thousands of visitors to Winnipeg and as it is the occasion of two Retail Conventions, an unusually large number of merchants are visiting the city. All bring reports of exceptionally good crop prospects in their districts, and it is plainly seen that the western trade are in optimistic mood.

Wholesale houses are busy welcoming their customers and the city is en fete in honor of the visitors. Business is not very active as this is practically a holiday week. There are no price changes of importance.

Screen Wire Cioth—Price is still quoted at $1.55 per 100 square feet. The season's trade is almost over.

Poultry Netting—Prices are as follows for the 2-inch mesh in No. 19 gauge:

24-inch roll, perroll			$1 20
30	"	"	1 50
36	"	"	1 80
48	"	"	2 40
60	"	"	3 00
72	"	"	3 60

Wire—Prices are steady and trade is of normal proportions. We quote:

Barbed wire, 100 lb.		$2 85
Plain galvanized	6 to 8	3 39
"	9	2 50 2 90
Plain galvanized	10	3 50
"	12	3 10
"	13	3 20
"	14	3 90
"	15	4 45
"	16	4 60
Plain twist		2 85
Staples		3 35
Oiled annealed wire	10	2 96
"	11	3 02
"	12	3 10
"	13	3 20
"	14	3 30
"	15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—There is the usual light Summer demand. We quote:

Horseshoes, iron, No. 0 to No 1	$4 55
No. 2 and larger	4 30
Snow shoes, No. 0 to No. 1	4 80
No. 2 and larger	4 55
Steel, No. 0 to No. 1	4 75
No. 2 and larger	4 50

Horsenails—Discounts are as follows: "C" brand 40. 10 and 7 1-2 per cent.. "M" brand and other brands 55 and 60 per cent. Add 15c. per box.

Wire Nails—Moving in very large quantities. Base price: $2.85 per keg.

Cut Nails—Base price $3 per keg. Very few selling.

Screws—In good demand at unchanged discounts. We quote:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

WALL COVERINGS

We always have a large and well assorted stock of

BURLAPS

on hand, and are agents for the celebrated

FAB-RI-KO-NA

Dyed Tapestry Burlaps.

Write for samples and prices.

Orders filled same day as received.

G.F. STEPHENS & CO., Limited

PAINT AND COLOR MAKERS

WINNIPEG, - CANADA

Coil Chain—We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.25
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discount 60 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—We quote:

Axes, chopping	$ 6 75 to 12 00
" double bitts	12 00 to 18 00

Files—We again quote as follows:

" Arcade "	70 and 10 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—The heavy demand which has been experienced all season, shows very little slackening. Prices are quoted as follows:

Anchor, plain	55c.
" tarred	70c.
Pure fibre, plain	60c.
" " tarred	80c.

Ammunition, Etc.—All lines of ammunition are in brisk demand now for the Fall trade. Discounts are quoted as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	15 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Eley's and Kynoch's soft, 12 gauge black	15 00
chilled, 12 gauge	16 00
soft, 10 gauge	18 00
chilled, 10 gauge	19 00
Shot, Ordinary, per 100 lb	6 25
Chilled	6 75
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—Business is fairly active. Prices are quoted as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 25
Lathyarn	11 25

Solder—For small quantities the price is 20 cents per lb. Concessions are obtainable for large quantities.

Iron and Steel—The market is steady and fairly active. We quote:

Bar iron (basis)	2 50
Swedish iron (basis)	4 75
Sleigh shoe steel	2 65
Spring steel	3 00
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

Black Sheets—Business continues very active at firmly maintained prices. We quote:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Sheets—All the leading brands are in active demand. Prices are steady and are quoted as follows:

Apollo, 16 gauge	4 00
18 and 20 gauge	4 00
22 and 24 gauge,	4 25
26 gauge	4 25
28 gauge	4 50
30 gauge or 10¾ oz	4 75
Queen's Head, 24 gauge	4 25
26 gauge	4 50
28 "	4 75

Corrugated Roofing and Siding—Selling briskly at prices quoted last week:

PAINT, OIL AND BRUSH TRADES

ROCKEFELLER AND LINSEED.

A BUFFALO dispatch early this week stated that John D. Rockefeller, through the American Linseed Oil Co., had cornered the flaxseed market and compelled the three big independent mills there to close. The price of linseed oil would be advanced 40 cents a gallon, and in getting control of the linseed oil industry Mr. Rockefeller would make a profit of about $20,000,000 on an investment of between $8,000,000 and $10,000,000.

The dispatch went on to state that the price of seed had been run up from about $1.25 to $1.48 for flaxseed and the market would be in the hands of the Rockefeller interests until the new seed is received in September and October.

Seemingly this would have a marked effect on the Canadian market if the facts are as outlined. It is not probable, however, that the predictions made in the dispatch are correct, it having emanated from some source desiring to "bull" the market. As a result of Rockefeller's corner, the price of oil may jump up ten or even twenty cents, but a rise of 40 cents in August is extremely unlikely, the month being by no means a heavy buying season. The profit of $20,000,000, therefore, is not likely to materialize other than on paper.

The Canadian market will not be affected in any event, other than to slightly strengthen local prices. The heavy duty on oil will prevent importations from England, and the supply there being fairly large, prices in Canada will not increase much during August. Seed being higher in Calcutta and the Argentine being off the market until December or January, English producers will find oil cake marketing at a higher figure and can, therefore, sell oil at a cheaper rate.

The continuance of firm prices in Canada being assured, there is every likelihood of Canadian mills crushing this season, the heavy crop in North Dakota being expected to be sufficient to meet the American demand for flaxseed, while the duty of 25 cents per bushel is a heavy obstacle for American importers to overcome. An uncertain quantity is the amount of acreage of flaxseed sown by farmers in the Northwest, prices last season having been at their lowest. This year has been a favorable one for a heavy crop, but it is too early to estimate the probable harvest.

A CORNER IN GLASS.

A REMARKABLE agreement has recently been made between British and Belgian glass manufacturers, which will have an important effect on the trade in Britain and the British colonies.

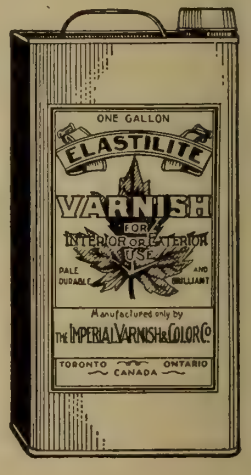
The Belgian firms (who are the only serious rivals of the British glass manufacturers in Europe) have agreed not to send into Great Britain or British colonies any rolled plate glass, muranese tinted and embossed glass, except to the order of the British firms signing the agreement. These latter, it is understood, have undertaken to accept the delivery of a certain proportion of the Belgian output. The return made by the British manufacturers for this concession is that they undertake not to send any of these particular lines of glass to the continent.

This agreement puts the British firms involved in entire control of these lines imported from Belgium, and a jump in prices will no doubt be the result, as competition will have been removed.

The quantity of Belgian rolled plate and muranese and cathedral glass imported into Britain equals, if it does not exceed, the domestic output, being a department to which the Belgians have paid particular attention. Further developments are looked for in the sheet glass trade, as a result of this compact.

GROWTH OF STEPHENS CO.

The contract has been let for the addition of two storeys to the warehouse of the G. F. Stephens Paint and Glass Company at Winnipeg. The growth of this warehouse and of the business housed with it keeps pace very well with the growth of the city in general. The building was just erected something like nine years ago, and was—for that time—a block of which the city might be proud, 90 x 90 feet and three storeys high. Two years ago the building was more than doubled, being increased by an addition 154 x 50 feet, three storeys hgh. Now, nine years since the building was first erected, its original size will be more than trebled by an addition of two storeys. The completed warehouse will be 154 x 110 feet in dimensions, and five storeys hgh.



ENLARGING PAINT FACTORY.

Operations have already begun on the new addition to the manufacturing plant which is being erected by P. D. Dods & Co., of Montreal, manufacturers of ready mixed paints. The present plant is too small for the output which is required during this coming season, and to meet the trade on an equal footing it was decided to double the capacity of the plant. The new addition will be the same height as the building now in use, three storeys and basement, and will be constructed of brick and stone. It will measure fifty-two feet by fifty feet and will cost about $10,000.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 28, 1905.

IN some quarters the demand for Paris green has fallen flat and the season for 1905 may be said to be practically over. This change in conditions, although sudden, is only natural on account of the shortness of the season and the limited amount sold. The recent advance in white lead shows a marked falling off of the orders. This is a quiet season in the white lead trade and it is not likely that the retailers will buy until the demand strengthens some weeks hence. It is then expected that the market will be much steadier and if any change in price is to occur it will likely have taken place by then. business from the retail merchant's point business from the retail merchants point of view is much better than in previous years, and local wholesale dealers and manufacturers are looking forward to an early opening of all business. Within this past few days trade has become much quieter and manufacturers have taken advantage of the situation by giving their travellers holidays.

Canadian Paris Green — Barrels, 17 1-4c.; arsenic kegs, 17c.; 50 and 100-lb. drums, 18c.; 25-lb. drums, 18 1-2c.; one pound packages, 19c.; half-pound packages, 21c.; one pound tins, 20c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Owing to the active demand the price is higher and prices for English green can only be furnished on application.

Turpentine—Single barrels 90c. per gallon; two to four barrels, 89c. per gallon. For smaller quantities than barrels, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Raw, one to four barrels, 51c. to 54c.; five to nine barrels, 50c. to 52c. boiled, one to four barrels, 54c. to 56c. five to nine barrels, 53c. to 55c. f.o.b. Montreal. Net 30 days.

Ground White Lead — Best brands Government standards, $5.50 to $5.70; No. 1, $5.25 to $5.45; No. 2, $5 to $5.20; No. 3, $4.75 1-2 to $4.95; No. 4, $4.50 to $4.70, all f.o.b. Montreal.

Dry White Lead—Barrels, $5.25; 100-lb. packages, $5.50; six or ten-lb. tins, $6.50.

Dry White Zinc—Pure dry in casks, 7c.; in 100 lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb kegs, 6 1-2c.

White Zinc (ground in oil)—Pure, 25 lb. iron, 7 1-2 to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—Pure linseed oil $1.75 to $1.85. Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish — Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil — 8 to 9c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—No change has taken place during the week. Our quotations are: American prime white, 14 1-2c., American water white, 16c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
July 28, 1905.

PARIS green is not being ordered so much as the season is practically over. Some is still being sold, however, the tremendous demand having caused some merchants to rush refilling orders more than once. The trade this year has been the largest on record and jobbers and retailers will carry an exceptionally small amount over till next season.

White lead and mixed paints are meeting with a very satisfactory sale, the holiday season having reduced the demand very little.

Linseed oil quotations remain the same and while the market is not so strong, the condition is not considered to be more than temporary. The bulling of the United States market by the Standard Oil interests, will have an indirect influence on Canadian markets, the tendency being toward higher prices until October. Turpentine is holding firm at prices quoted last week. We quote:

White Lead—Ex Toronto, pure white $5.50 to $5.75; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.37 1-2; No. 4, $4.10 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $4.25.

Red Lead—Genuine in casks of 560 lbs., $5.25; ditto, in kegs of 100 lbs., $5.50; No. 1, in casks of 500 lbs., $4.75 to $5; ditto in kegs of 100 lbs., $5.25.

PAINT BUSINESS GOOD.

FAVORABLE weather has made 1905 the record year in the paint business, the demand for colors and mixed paints being exceptionally heavy during the Spring and Summer. Mixed paints have, of course, the greatest sale in hardware stores, although oil and colors are in good demand. Floor varnishes and stains, as well as barn paints, are called for in large quantities also. The tremendous activity in building in all part sof Canada indicates that there will be no falling off in the demand, and there is every likelihood of 1905 being the banner year for the paint trade.

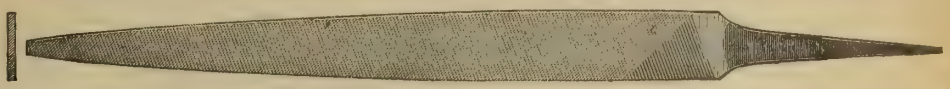
CHEAP PAINTS.

Last week's Hardware and Metal contained an advertisement of Ramsay's barn paints, describing the good qualities of this well-known brand and quoting the low price of 10c. per gallon. The quotation was an error, as, while Messrs. A. Ramsay & Son are always glad to sell their paint as low as possible, they have not been able to get their $1 paint down to 10c., but they sell the best that comes in the way of paint at the lowest price. A sample order will be a good method of testing the accuracy of this statement.

Stop the leaks and save the profits.

Think twice before you contract a debt.

Don't trust to luck in anything. Look before you leap.



In granting credit be certain that the chances of collection are on your side.

Do you pay enough attention to your tool department? This is a line that not only belongs to the hardwareman but is never carried by anyone else—that is, as far as fine tools are concerned. And in every town there are carpenters, blacksmiths and masons, if not machinists, plumbers, electricians, etc. By advertising direct to these men and making special efforts to carry a line of tools that they can use the trade ought to be greatly increased.

Globe Brand Files and Rasps

WARRANTED

Possess all the merits of the Best Hand-Cut Files. For sale by all prominent Hardware Dealers.

Thirty years' experience has taught us how to produce a Perfect File, consequently we are justified in giving our customers an absolute warranty with our product.

STOVES AND TINWARE

CLEANING GAS STOVES.

THIS is the way, says the Gas World, in which stoves are cleaned by one of the leading gas companies, and done with marked success, the company being practically able to reissue the stoves equal to new. First of all, the cooker about to be renovated is taken to the bench by a fitter, who removes the hot plate float (consisting of brass taps), brass oven cock and door. The remainder of the oven complete and the hot plate are placed in a muffle, dimensions, 4 feet 9 inches high, 3 feet 10 inches wide and 4 feet deep, built of fire brick, the floor having fire brick tiles, 3 inches thick, for the oven to rest upon. The door is also of fire brick tiles, iron cases, which is worked by an overhead pulley. The muffle is heated by a furnace underneath in which coke and breeze are used, and it is got up to over 600 degrees. When not in use at night time the furnace is slackened by means of clinkering, so that the mu allowed to get quite cold. w soon unsettle the bed. The s allowed to remain in the muf hour, on an average, and drawn, all dirt, grease, et entirely removed. Before oughly cold a stiff wire on the castings, which new.

While the process of burning ing on the fitter takes the doo polishing room for the bright parts to be polished. In this room there are used emery wheels, buffs, drilling machine and grindstone, worked by a six h.p. gas engine. The enamel plate of the oven door, the float and gas taps are immersed in a large copper (capacity. 120 gallons). This is heated in the same manner as the muffle. In order to make a strong pickle, 28 pounds of strong soap powder (Wiggins & Khyll's) is put into the copper and kept at boiling point while in use, and, as in the case of the muffle, cooled down during the night. The copper is cleaned out and the soap powder renewed twice a week. Having thoroughly cleansed the cooker, the fitter then takes the parts, as already divided, to his bench, and refits them. The taps, with the use of a little metal polis (after having been in the copper) come out splendidly. If found defective they are, of course, replaced. The castings are coated with a special dull black varnish, so as not to cause a smell when the stoves are in use. When fitted, the burners are all tried and allowed to remain alight, so as to give the stove a thorough burning off and testing.

ALUMINUM WARE.

ALUMINUM ware, a ware that in Europe and the United States is now in common use, has even yet, despite steady advertising, to attain to that stage of everyday usage in the smaller households of this country, as it has elsewhere. A steady growing demand is, however, rewarding the Canadian Aluminum Works, Limited, Chambly Canton, Quebec, for their five years' pioneering of the then new metal in Canada.

The strong features of aluminum cooking utensils are not readily understood but to those constantly using them. Aluminum does not corrode, neither will it rust. It is as near indestructible as any article can be that is in daily use. It is susceptible to the highest of polishes; therefore, with this quality added to its many others, the happy possessor of aluminum utensils generally considers them, and very naturally so, the most prized articles in her kitchen.

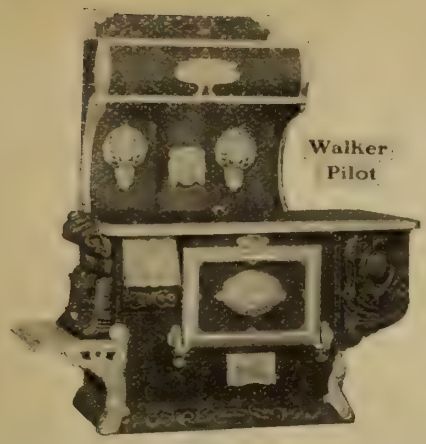
Many people are prejudiced against aluminum ware, being under the impression that, because it is one of the newer metals it is expensive. This erroneous idea has dissuaded many thrifty housewives from considering it as practicable in their kitchen equipment. But aluminum is not expensive. A cooking utensil made of this metal is said to have four times the life of the metal utensils now in common use. Aluminum is a most sanitary metal, a proof of which is its large usage in hospitals and sanatoria.

It is no unusual occurrence for a vessel containing some article of food in preparation for the table to be allowed to boil dry. What is the result? An utterly useless vessel, and the great portion of the contents of it unfit for the table. With an aluminum vessel, all that occurs is the loss of any such portion of the contents as adhere to the vessel bottom. The vessel sustains no injury, neither does the greater part of its contents. Rice and other cereals can be cooked to a dryness directly over the fire without scorching. Cakes of all kinds can be cooked in aluminum pans without using greasy paper. Should the temperature of the oven be too high the cake will burn on the top first.

BRANTFORD FIRM EXPANDS.

George F. Sterne & Son, Brantford, who at present manufacture a species of fire-proof stove putty, intend to erect a new factory, and will go extensively into the manufacture of fire-proof stove putty, as well as asbestos furnace cement. The new building will be 30 x 80 feet and two storeys high. Ten men will be employed.

STOVE ITEMS.



This is furnace repair time.

During the building season is the time to advertise furnaces and stoves.

J. J. Cain, Alliston is advertising for a first-class tinsmith. It's a good opening for some man.

Don't let a furnace job go to a dealer in another town because of neglect to look after the job.

The contract for heating and ventilating the public school at Bradford has been secured by the James Smart Mfg. Co., of Brockville, who will use two Kelsey warm air generators on the job.

All are Essential and All are Embodied in The

Present and Future Success. Arrange your stove line on a basis of lasting success, combined with a price that will enable you to intelligently and profitably look after the trade.

Demand Merit, First, Last and All the Time. Offer to your customers a thoroughly modern article, one that is replete with all practical utilities and conveniences. Do not injure your standing with them by selling an obsolete style of Range, made simply because some maker still uses the patterns of by-gone days.

Look for These Features. They are essential to the proper working and economy of any Range.

A proper end draft, along the entire length of the grate.

A perfectly controlled reservoir, encased in cast iron, and responding quickly when required.

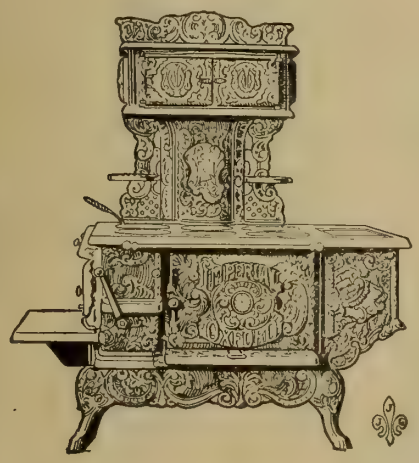
Ash Pan of ample capacity, easily removed and without spilling of ashes.

A cast iron flue back that will not rust out.

Large pouch feed and broiler door.

WALKER PILOT STEEL RANGE

Other Features of this Range are: Balanced Oven and Closet Doors; Duplex Grates, removed without disturbing linings; Oval Firebox; Enameledware Tank; Oven Thermometer; Wood Extension and a profusion of handsome nickel.



All parts are closely rivetted, oven bottom, lower edges and other parts strongly reinforced, and asbestos is freely used where necessary.

Catalog and Prices for the Asking

Walker Steel Range Company, Limited

Grimsby, Ont.

Extra profits that look big when made by selling some inferior Range may melt away or even turn to loss when the inevitable "kick" comes with its demand for replacements or exchange. Why not avoid disappointment by selling the Range that has proved its dependability—the

IMPERIAL OXFORD RANGE

As a practical man you will appreciate its mechanical excellence and superior finish, and realize that it is easy to demonstrate its "talking points" to buyers. The women folks know by reputation the superiority of the Imperial Oxford Range, and this, with our extensive advertising, makes selling an easy matter.

Better decide to handle the Imperial Oxford.

ARTICLE X.

STEAM HEATING.

WE have discussed in a previous article the method of installing piping on the "two pipe gravity" system, and we now propose to show how equally good results may be obtained with little more than half the piping required in that class of construction, by what is known as the "single pipe gravity" system.

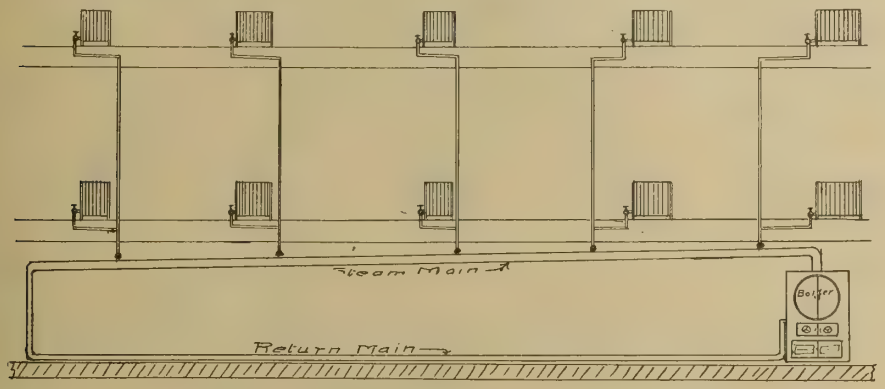

Fig 1.

The word gravity, in its application to a heating system, means that the condensation will flow out of the course of the steam directly back to the boiler, or otherwise as desired, (in the matter of the disposition of the condensation we will treat more fully later on), and in this particular the single pipe system does not differ from the two pipe system inasmuch as that the steam main has a gradual decline from the boiler to its farthest or most extreme end, so that it is constantly drained.

The great difference between this system and that last described, however, lies in the fact that only one pipe is connected to each radiator, instead of two, and in consequence there are only half the number of risers required, the principle of the system being to compel one riser line to not only supply the necessary amount of steam, but also take back to the steam main all condensation.

Of course it goes without saying that all of the piping in this system must be larger than that required to supply a similar amount of surface on the "two pipe" principle, on account of the double duty which it is compelled to perform, though, generally speaking, the increase is only one size over that required for the latter, and in this connection it is proposed to publish a simple table, when we have described the various systems, showing the amount of work which each size pipe will perform in each system.

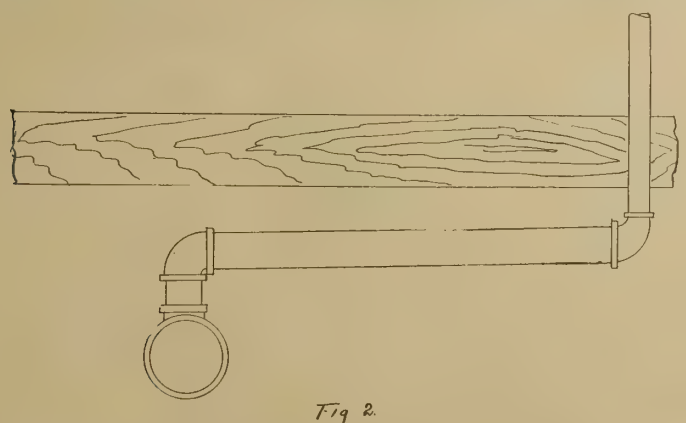

Fig 2.

On reference to Fig. 1 the reader will get a good idea of the principle upon which the single pipe system of steam piping is installed.

It will be noted that the steam main has a sufficient fall from the boiler to the opposite end to permit of its ridding itself of all condensation, through the relief which connects it to the "return main," and the relief must be almost if not as large as the return main, because through it will pass all of the condensation flowing from every radiator and pipe in the building, or at least that portion of it heated by the steam main to which it is connected, for, as will be plain, the building may be divided into sections and a separate steam main or "circuit," as it is styled in single pipe heating, run to each.

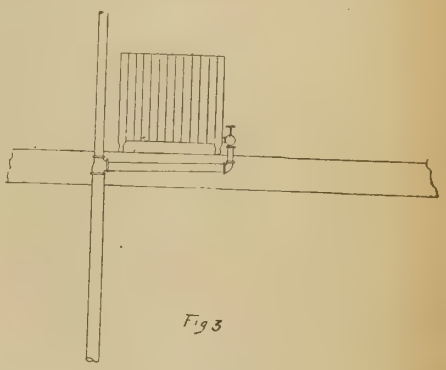

Fig 3

From the top of the steam main is taken off branches which rise to the highest floor to be heated, leaving off horizontal connections at each floor, the said connections being left moderately long to provide for expansion of the riser, and being one size larger and having a good grade back to the riser, so that condensation, instead of accumulating, as it would if the pipes were not large, will flow freely back to and down the latter, even against the opposing currents of steam.

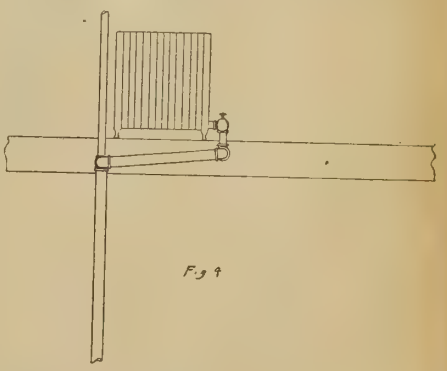

Fig 4

In Fig. 2 we have an illustration of the method of connecting the riser to the steam main. It will be noted that the principal difference between this connection and that required for two pipe work is :

First.—That it drains back to the steam main instead of toward the foot of the riser, thus obviating the necessity of connecting a relief pipe between

the latter point and the return main.

Second.—That the horizontal connection between the main and riser is one size larger than the latter, because the friction of the steam in passing over the condensation in a horizontal pipe has much more influence over it than is the case where a good grade or direct fall can be given.

Expansion of the main is provided for in Fig. 2 in exactly the same way as was indicated when the two pipe system was under discussion, viz., by having a fairly long connection between the main and riser, so that a moderate amount of "spring" is provided for, and, if necessary, a certain amount of movement may take place on the threads of both elbows and the top of the T.

In Fig. 3 is shown a branch connection for a radiator taken off the side of a riser line. The object of connecting to the far side of the radiator, instead of to that nearest the riser, is to provide for a certain amount of movement up and down of the riser, due to expansion and contraction, for it will be obvious that were the connection between the radiator and the riser a short, rigid one, the radiator would be lifted off the floor every time the riser expanded, or, if the radiator were very heavy, broken or leaky joints would probably result, while with such a connection as that indicated in Fig. 3, there will be sufficient "spring" to permit of a moderate amout of expansion.

When we speak of a moderate amount of expansion we refer to risers in buildings of moderate height, and where low pressures of steam are carried, because, as is well known, the higher the riser the greater will be the amount of "movement" at the top, and the same holds good regarding the steam pressure, for it will be plain that as the temperature rises with the pressure, so the expansion increases in like proportion, so that when for any reason there is an abnormal movement in the steam riser, or when the connection between it and the radiator must necessarily be short, we recommend the connection shown in Fig. 4.

In this case the connection is taken off front of the riser instead of the side, and is turned in again under the valve, the advantages being that not only has it the "spring" of the other connection shown in Fig. 3, but, should the movement of the riser be excessive, it can turn on the threads of the elbows without danger of breaking anything, and in addition can be given a much better fall toward the riser than is possible with that shown in Fig. 3.

In running a steam main for a one-pipe system, what are known as "eccentric" fittings should be used. These fittings are used wherever a reduction is made in size, and provide proper drainage of the main by having the bottom of the various sized pipes on the same plane, instead of "stepped up" as they would be wherever a reduction is made with ordinary fittings.

The advantages of the one pipe system are that while larger pipe is necessary, much less of it is required, it takes less labor to instal it, half the valves and other fittings required for the "two pipe" system will suffice, and on the whole it has a much better appearance.

An exhibition of sponges and bathroom accessories in the window should bring results now.

TORONTO PLUMBERS' PICNIC.

LORNE PARK was the rendezvous last Friday for the members of the Toronto Master Plumbers' Association, their wives and children and their friends, the occasion being the annual picnic of the M.P.A., the day being a glorious one and about 450 partaking of the hospitality of the jolly plumbers. That the weather man who makes his headquarters in the Queen's Park Observatory is in league with the plumbers is proven by the fact that he provided an ideal day for their outing, turning off the hot air so universal earlier in the week, and adjusting the shower valves so that none of the juice was unloaded until the "glad day" was past.

A special train left Toronto about 9.45 a.m., badges being distributed amongst the excursionists, and committees making tours of the train handing out fancy fans and bags of candies and nuts to all the ladies and children, it being their day of enjoyment, baskets being left at home and all being invited to have dinner and supper at the Lorne Park Hotel at the expense of the Association.

Arriving at the park a group photograph was taken, after which some drank in the beauties of nature, while others filled the inner man with the best the hotel man could provide, the size of the crowd evidently being greater than the expectations of this individual. No prettier spot than Lorne Park could have been chosen and the committee took full advantage of the splendid facilities for enjoyment, lawn bowling, quoit pitching, races, baseball games, dancing, 'bus rides and baby shows, all being participated in during the afternoon.

Ten races were run off between the boys and girls under fifteen years of age, the feature of the fun being that every contestant secured a prize, even the bashful, the lame and the halt, who did not exhibit their running abilities, being made the recipients of souvenirs by the committee. Fred Hogarth won the married men's race, with Rennie Wright a close second. Miss Edith Hogarth took first honors in the single ladies' event, with Miss Edith Inwood second and Misses L. J. Ryan and A. C. Tomlinson tied for third prize, after several attempts to break the tie. Another Hogarth crossed the tape in the lead in the married ladies' event, Mrs. Fred Hogarth winning, followed by Mrs. H. J. Hillier and Mrs. J. R. Bolam. Mrs. W. Inwood took the cake in the fat ladies' event and Mrs. Hawkins and Mrs. Brown captured first and second in the ladies' egg race. The fat men's race attracted a lot of attention, Pete Jessimane coming in first after Angus McPherson and A. W. Erwood had crossed the line.

The baseball match was closely contested for twelve innings and finally resulting in a victory for the master plumbers over the manufacturers and supply men by a score of 15 to 13. The features of the game were the heavy batting of G. Moore, of the plumbers' team, and Bill Bailey, of the supply men, the former knocking out a homer and a three-bagger, while the latter also secured four bases as a result of his slugging. The teams lined up as follows:

M.P.A.—A. Richardson, p.; R. Knott, 1b.; J. Fullerton, 2b.; D. Menzies, 3b.; G. Moore, s.s.; R. W. Harrison, l.f.; J. Elliott, c.; G. Ashdown, c.f.; C. Armstrong, r.f.

Supply Houses.—W. Porter, 3b.; F. Morrison, c.; A. Hellewell, p.; F. Worthington, l.f.; C. World, 2b.; B. Bailey, s.s.; W. Grant, c.f.; H. Gurney, 1b.; and J. Gouinlock, r.f.

In the lawn bowling contests the plumbers and supply men lost to the Lorne Park team, owing to the grounds being strange. They proved themselves good bowlers, however, their teams being made up as follows: Fred Armstrong, W. Mansell, A. D. McArthur and F. Somerville, and Joseph Wright, George Clapperton, P. Hayes and A. Maxwell.

In the baby show there was more trouble in securing judges than in selecting the winners. Messrs. L. J. Avery, W. Meadows and W. Messenger finally consented to act, however, they choosing as the winners the children of Mrs. Fullerton, Mrs. Robinson, Mrs. Crowlan and Mrs. Needham in the order named.

Notes.

"These Toronto plumbers are a fine lot of fellows and they give a better time than we get on the other side," said an American who was present.

W. Mansell was around with his hand bandaged as a result of having it poisoned recently. He is recovering.

The quoit match and the tug-of-war were not pulled off.

Amongst the representatives of the supply houses and manufacturers present were noticed: Messrs. L. L. Anthes and H. W. Anthes, of the Toronto Foundry Co.; F. Armstrong, C. World and D. World, of the James Morrison Co.; A. A. McMichael and Jno. M. Owston, of the James Robertson Co.; F. Somerville and W. Porter, of the Ontario Lead and Wire Co.; R. J. Cluff, of R. J. Cluff & Co.; A. D. McArthur, of the Standard Ideal Sanitary Co.; Joseph Wright, T. Worthington, C. Brewer and G. H. Reid, of the Dominion Radiator Co.; H. Gurney, jr., and A. Hellewell, of the Gurney Foundry Co.; R. W. Crashley, of the Canada Brass and Supply Co.; M. P. Huffman, of the Canada Radiator Co.; J. Heozborm, of the Glauber Brass Mfg. Co., Cleveland, and L. J. Avery, of the Wolverine Brass Works, Grand Rapids, Mich.

The committee responsible for the good time were as follows: Messrs. G. Clapperton, D. J. Morgan, J. E. Fullerton, K. J. Allison, W. J. Mason and W. Benson, with Pete Jessimane as general master of ceremonies.

PACKING FOR BOILERS.

A cheap and excellent packing for the manholes of boilers may be made in the following way, according to the Scientific American: Select three pieces of millboard or strawboard, each about 3 inches larger than the manhole and not less than one-eighth inch in thickness. Glue them together so as to produce a board three-eighths inch in thickness, and with a pattern of the manhole mark out the exact size, and after the glue is thoroughly hard cut out the packing of the requisite size with a band saw. The packing will not shrink or split open like those made of wood, and has been used successfully for nearly two years.

REMOVING INK SPOTS ON MARBLE

Ink spots on marble may be removed with a paste made by dissolving an ounce of oxalic acid and half an ounce of butter of antimony in a pint of rain water, and adding sufficient flour to form a thin paste. Apply this to the stains with a brush; allow it to remain on three or four days and then wash it.

MUELLER COMPRESSION WORK

SPECIAL GRADE BIBB

C-235.

When a compression bibb spreads the stream over the edges of a cup or other receptacle it becomes a thing of as much vexation as use.

The use of Mueller Compression Bibbs is not attended with such vexation. The water way is so tapered from the body to the end of the nose that the water is delivered in a full sized, even and compact stream.

Mueller Compression Bibbs are made in standard, extra and special grades, in plain or hose patterns and all styles of pipe connection. The bibb illustrated is the special grade, plain pattern and iron pipe style.

Each bibb bears the Mueller trade mark and is *unconditionally guaranteed.*

THE CANADA METAL COMPANY

WILLIAM STREET, - TORONTO

HEATING AND VENTILATING FIFTY YEARS AGO.*

IT had been the intention of the writer to give an extended resume of several early works on heating and ventilation in order that opportunity might be given to contrast our present practice with that common fifty years earlier. A press of other work has prevented me from giving the necessary time to this article to make it of much value historically, and I can only hope to suggest in the short time which I have had for the preparation some topics for discussion to those who are qualified to discuss the present methods as compared with those used much earlier.

I can at best hope to make only a few general observations.

One conclusion which I think can be stated as contrasting the work done in this art one-half century earlier with that to-day is this: The improvements which have been made are principally in the line of manufactures, such as can be comprehended under the heads of materials, workmanship and art. There have not been great or radical changes in methods and systems of heating and ventilating, so far at least as the descriptions in the various books at hand can indicate. Fifty years ago there were few manufactured articles on the market in any country of the workd for the erection of heating and ventilating systems, and it was necessary in a great measure to use articles of special design and manufacture.

One Man Did It All.

Thus, for instance, if you refer to the work of Thomas Tredgold, published in London in 1836, you will find that at that time a steam heating engineer would have been in possession of approximate methods of computing the loss of heat radiated from buildings and of corresponding methods of computing the necessary size of radiating surface to supply the required heat. You will find, however, no standard or manufactured forms of heaters or radiating surfaces existed, and that, consequently, it was necessary for the heating engineer to also be his own manufacturer and designer and construct his own heaters, radiators, etc.

Tredgold's book states that steam pipes may be made of cast iron, lead, copper or wrought iron, but in practically all the examples cited, cast iron pipes are shown. Regarding the various joints for pipes, Tredgold gives preference to the flanged joints packed with a flat plait of slightly twisted hemp yarn, which has been previously saturated with stiff white lead paint. He also speaks of making joints by facing the flanges and using for packing a strip of tin. He had even found out at that time that lead was too compressible to be used instead of tin for this purpose, as it contracts permanently. He also speaks of the use of iron cement for flange joints. The use of spigot and faucet joints, which were then common for water pipes, he states, are not well adapted for steam pipes because there is no provision for holding the parts together.

Similar Methods Used.

Tredgold states that wrought iron pipes are joined "by making the lengths that are to be put together each to screw into a piece of pipe of larger diameter," which is practically our method at the present day. For the purpose of taking up expansion, Tredgold recommends that a drum of thin copper be employed, which may be compressed or extended without injury, and states that such drums were used in steam pipes supplied to warm a lecture room at the Royal Institution. He states that the expansion may be taken up by connecting the pipes to a short length of smaller pipes arranged to slide in a stuffing box, but the drum he considers preferable.

Tredgold's work shows that he was well acquainted with the design and construction and use of steam traps for removing the water condensation, two kinds being illustrated, one a float trap, which is perfect in every detail, and the other a siphon trap, made by connecting the return pipe with a U bend, of which the legs were long enough to overcome the pressure due to steam.

The boilers shown in Tredgold's work are of both cast iron and wrought iron. The cast iron boiler is of spherical form, without internal tubes, and it is set in brick casing so arranged as to cause the heated gases to encircle the sphere in a spiral path. The wrought iron boiler is of cylindrical form, without any internal flues, and is set in brickwork so as to be encircled by the heated gases. The boiler is provided with a safety valve opening inward to prevent the formation of a vacuum, and a combined manhole cover and safety valve opening outward, the manhole cover being held on by a bar designed to give way should any excess of pressure come upon the boiler.

Steam Heating System.

In the steam heating system shown by Tredgold, the condensed water is usually returned to the boiler by gravity, his direction for piping being as follows: "The steam pipes proceeding in the nearest course to the highest point where steam is required and then descending to the lowest, from which the small condensed water pipe returns the water to the boiler. Unless you want heat in the places through which this small pipe is to pass, let it be surrounded with slow conductors of heat so that as little as possible may escape."

He states that when the boiler is not sufficiently low to receive the return water, then it may be necessary to adopt other schemes, and he describes a very ingenious method of raising the water of condensation by means of the steam pressure acting on one leg of the U-shaped piece of piping, so connected as to raise the water in the other leg high enough to enter a tank, from which it will flow to the boiler, the water level in the boiler being regulated by a float valve. Tredgold expressed an opinion very unfavorable regarding the use of heating with hot water circulation, and it is quite possible that he did not appreciate the force which caused such circulation.

Tredgold's book is ample evidence that the art of heating with fire places was rather more advanced in his day and time than at present, principally because they were more used. He gives detailed descriptions of fire-place constructions designed to utilize the heat to the best advantage and discusses the methods to be followed in securing perfect combustion and best results.

The treatise on warming buildings, by Charles Hood, written in 1844, is principally devoted to the method of heating with hot water. In general, the same observation regarding practice at his date could be made as in respect to the time of Tredgold. His work shows an excellent understanding of the principles of heating by hot water circulation, his methods being limited by the materials and workmanship available at his time.

Both Tredgold and Hood consider methods of ventilation as well as heating, and approximate rules are given for the motion of air in flues, which is caused by a difference in temperature.

Early Systems Explained.

In 1844, Dr. D. B. Reid wrote a work on the "Theory and Practice of Ventilation," which is a classic in its line, even to the present day. Dr. Reid's treatise shows that the science and art of moving air by difference in temperature was probably as well advanced as at the present time, and he gives detailed drawings of the construction of the ventilating system in the House of Commons and full description of the results of the various experiments in that building. His description of the ventilation in the House of Commons is well worthy a place in our proceedings.

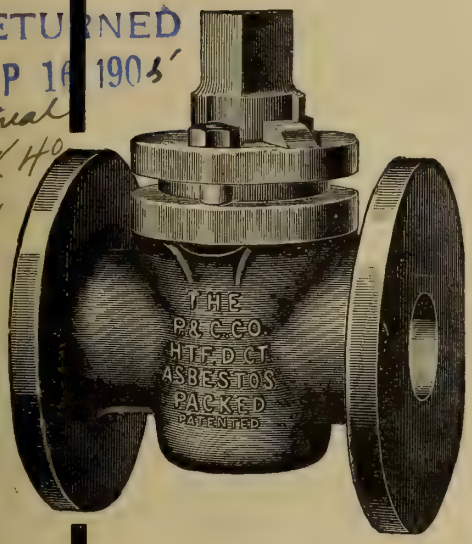
Dr. Reid also describes a number of forms of fans or blowers which indicate that in many cases these were frequently used at that time for forcing in fresh air from the outside or exhausting it from the inside. The blowers, or, as Dr. Reid calls them, "fanners," while well known, were evidently not used to any great extent at his time, probably because of the difficulty of obtaining power to operate them.

The works of Peclet were printed in France about the same time as the books previously referred to, and these also illustrate the same propositions which I stated at the beginning of the article, and will not be further referred to in this particular time and place.

It will, I think, be generally admitted that if all our processes of heating were known in a general way, fifty or sixty years ago, our improvements have been principally in the line of details of manufacture, in adapting materials to a greater field of usefulness, and in working up standards for manufactured articles. The effect of the improvements has been, first a great reduction in the cost of the heating plant; second, greater economy in the use of fuel, and third, a greatly extended application of the improved systems and methods of heating.

Where America Excels.

The American excels practically every other nation, principally by his engineering ability, which is manifested by the production of simple and effective designs, by improved methods of manufacture by which the cost of construction is reduced and the quality improved. The ability of the American engineer along such lines is nowhere better illustrated than by the thousand and one, perhaps ten thousand and one, standard articles which have been constructed to meet every possible phase of demand for the heating and ventilating of buildings. As illustrations we have our standard pipes constructed of steel or wrought iron of any size desired; for these pipes we have an almost countless variety of standard valves and fittings.



*Read by R. C. Carpenter, before Eleventh Annual Meeting of American Society of Heating and Ventilating Engineers.

Look Out for Imitations

OF

"P & C" ASBESTOS PACKED COCKS

RETURNED
SEP 16 1905
Montreal
Book 40
Page 37

Imitation is the sincerest form of flattery.

There are several imitations of the Pratt & Cady Asbestos Packed Cock now being offered. They are called Asbestos Packed Cocks, but they are the same as all other imitations, i.e., NO GOOD.

Anybody can make an iron or brass Cock and pack it with asbestos and call it an Asbestos Packed Cock. But they can't make one that will last as long as the original Pratt & Cady, or one that will give the same amount of satisfaction. Our P & C Asbestos Packed Cocks are packed with a special preparation of asbestos, and a vulcabeston ring is used on the shoulder of the plug for top packing. These special formulas are known to us alone. When you put in a P & C Asbestos Packed Cock it lasts. When you put in an imitation it wire-draws and blows out. That's the difference. Look out for the P & C trade mark on every Cock you buy.

If your dealer can't supply you write us direct.

Fine Grey Iron Castings.

OSHAWA, - CANADA

We have radiators in cast iron or steel of almost endless shape and variety and sufficient to meet almost any possible conception or demand of the user. We have standard heaters designed on scientific principles of so many varying proportions, sizes and shapes that no demand can arise which cannot be filled. This list could be almost indefinitely extended; it serves to show that the art of heating and ventilation has greatly improved in the last half century. My previous remarks show that its improvement has been more greatly in engineering and manufacturing lines than i scientific or philosophical lines; still, I do not wish to convey the impression that we have made no progress in the use of new processes for heating or in the application of scientific principles to new processes, for I think as an illustration it will be found to be true that vacuum systems of heating which are

No. 1005. Fire King Water Heater.

now common with us were not described fifty years ago, and doubtless many of the gentlemen here present will call attention to other recent improvements not referred to in the early publications.

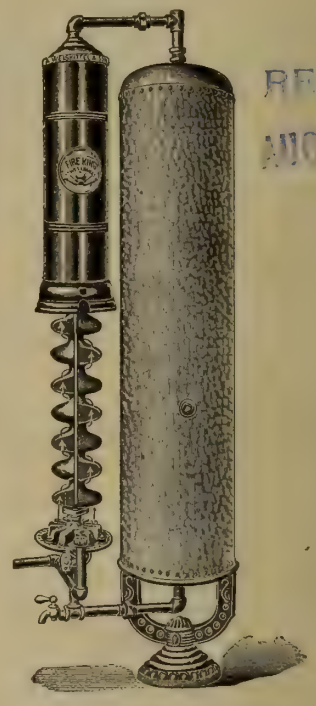
NEW GAS WATER HEATER.

A NEW pattern Fire King gas water heater has been developed by A. Weiskittel & Son, Baltimore, Md., to meet a demand for a low-priced water heater utilizing illuminating gas. It attaches to the side of any kitchen range boiler as an auxiliary heater without disturbing the coal range connection. Hot water for baths or other purposes can be had at any time at small cost. The heating chamber has an exterior double sheet iron casing that can be removed at any time without disconnecting the heater. The arrows show the direction of circulation of the heat through the water chamber, and it will be noted that this circulation is diverted several times in order to obtain a full utilization of the heat. The burner is made in one piece and is of the open star pattern. Its design, as a result of the experience of the makers, is such that combustion is effected without producing any odor whatever. The two cuts show the 1,000 and 1,005 lines, the cylinder covering the coil being removed on the former and raised on the latter without disturbing the pipe connections. Circulars explaining the heaters in detail will be sent to any plumber mentioning Hardware and Metal.

VENTILATING A THEATRE.

IN the design of the heating and ventilating plant in the new Majestic Theatre in Boston, Mass., particular attention was given to securing and distributing evenly the fresh air supply, and arranging the vents so that they may be closed and the air re-circulated locally when the theatre is not in use. Considerable economy is thereby effected.

The usual plenum chamber method is employed with branch delivery ducts leading to all portions of the auditorium. The chamber is formed by the open space or basement area beneath the sloping dress circle floor, into which the large blower delivers fresh air directly. The openings into the lower portion of the auditorium are made through the floor, while delivery to the balconies is similarly made through ducts leading to a supplementary plenum chamber beneath its floor. Vent connections are carried from the dressing and various other auxiliary rooms in the basement and from all portions of the auditorium to the gathering chamber beneath the roof, from which the air is exhausted by power.



The fresh air for the ventilating system is taken through inlets in the outside wall of the building about 30 feet above the street. From these it is led downward through ducts built in the wall to a large horizontal concrete duct containing the heating coils for cold weather use. The fan is a 7-ft. three-quarter-housed blower, built by the B. F. Sturtevant Co., Boston, Mass., with a direct-connected motor of 10 h.p. capacity, and is located in one corner of the plenum chamber, into which it delivers directly. The air is cleansed by a series of filters of cheese cloth upon light pine frames hung at the bottom of the vertical fresh air flues.

The air passes first through a large primary or tempering heater, and thence to the blower through the main heater, which may, however, be by-passed by the mixing dampers. The primary heater consists of eight sections of coils, six of which have 180 square feet of heating surface and the other two 160 and 140 square feet respectively. The main heater is composed of 1,872 linear feet of 1 in. pipe.

The principal delivery of fresh air to the auditorium proper is made through holes in the floor beneath the chairs. The chair legs away from the aisles are of a special design to cover these openings, which are distributed to the proportion of about one to every three chairs. There are about 300 of these openings in the main floor, each of which has a cross section of about 27 square in. A similar distribution is made from the balcony floor, there being an auxiliary plenum chamber in the space underneath it, which is supplied from the main plenum chamber by two large galvanized iron ducts, each having a cross sectional area of 650 square in. From this chamber air is admitted to the balcony through ½-in. holes in the risers, of which openings there are about 1,200, which gives an even distribution throughout the balcony.

The foul air is vented from the auditorium through openings in the ceiling, while for the spaces beneath the balcony and gallery there are vent openings in the side walls and ceilings, which connect with a Sturtevant motor-driven 60-in. exhauster, of special construction, located in the roof.

A novel feature of the ventilating system is the arrangement for circulating the air in the theatre when not in use. The fresh air inlet ducts leading to the heating coils and blower are provided with openings into the stage area, which are controlled by dampers in connection

No. 1000. Fire King Water Heater.

with those admitting air to the gathering chamber above the auditorium; by closing the latter and opening the connection from the cold air duct to the stage (which closes the connection with outside air) the air within the theatre travels in a closed circuit through the heating coils, plenum chamber, etc., with very economical results in the initial heating of the theatre in cold weather. The dampers in the ceiling of the auditorium, as well as also the main damper in the roof opening, are controlled from the stage.

Mr. A. W. Mann, of the Canada Brass and Supply Co., London, was in Toronto this week.

Mr. J. H. Duxbury, of the Builders' Iron Foundry Co., Providence, R.I., who has been engaged in installing the waterworks pump at Moose Jaw, has left for Brandon, to superintend the installation of a large pumping plant in that city.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, July 28, 1905.

ALL local wholesale supply dealers are thoroughly satisfied with the continued arrival of large orders. Despite the custom of former years the demand has reached a point beyond all anticipation of the most sanguine. The market on a whole is steady and, with the exception of lead pipe, there is not one instance where prices are likely to change. The likelihood of a change in lead pipe is due to the marked increase in pig lead. The advance of the last month has been so great that it is almost impossible to manufacture lead pipe at the prices quoted below and unless the pig lead market weakens the change already stated will likely occur. The unsettled condition of the iron pipe fittings market has almost passed away and a recent action taken by the American manufacturers leads the local wholesale dealers to believe that the present prices will remain steady.

Range Boilers—No change has occurred on this market. Prices are steady and although the demand is good nothing warrants a change. We quote: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The market has become very steady owing to the high price of pig lead. The present price paid by the makers of lead pipe warrants them in advancing the price. The demand continues to be strong. We quote as follows: Discount 30 and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—The trouble which was brewing on this market last week has almost entirely disappeared and a steadier state of conditions is expected. Our quotations are as follows: Discount on all sizes of nipples up to six inch. 67 1-2 to 70 per cent.

Iron Pipe—From throughout the country comes a brisk demand for iron pipe, and local dealers are purchasing large amounts from the mills in anticipation of the strong market this Fall. Prices are steady and firm. Our quotations are as follows: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 1-2 per cent.; 3-8 inch, 62 1-2 per cent.; 1-2 inch, 72 1-2 per cent.; 3-4 inch, and upwards, 74 1-2 per cent. Discounts on galvanized pipe: 1-4 inch. 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised. 61 per cent.

Soil Pipe and Fittings—Fair demand and steady prices are the two most notable features. We quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 28, 1905.

INTEREST in the plumbing market, this week, centres in lead pipe and brass. Although no change is noted in the price of lead pipe, the recent stiffening in pig lead must result in an early advance. Wise dealers throughout the country are ordering in larger quantities on the strength of this, and some supply houses report very large shipments to the west.

As predicted by Hardware and Metal some time ago, a new price has been fixed on brass, but the list is not yet out, and exact figures are not available. The expectation, however, is that they will show a drop.

Business generally in the plumbing trade continues very brisk and no falling off is expected until late in the Fall. The plumbers have so much work on hand that a good trade is assured the supply houses for next year, as well, in providing for finishing touches to contracts now under way.

Lead Pipe—An early jump in price is certain, though no change is noted this week. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—The demand continues brisk and large sales are reported at unchanged prices. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—The conditions of last week still hold good in these lines. Our quotations are as follows: Cast iron elbows tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers—Good sales are being made, but no fluctuation in price has occurred. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Trade in this line has been particularly active during the past week. Our quotations are as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Prices on solder have undergone no change in the past week. Our quotations are as follows: Bar solder, half and half, guaranteed, 18c.; wiping solder at 16 1-2 to 17c., and refined 17c.

Enameled Ware— Local houses are preparing for large future business n these lines, and several of them are fitting up very handsome show rooms. Prices remain the same as last week. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50, special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

A GAS-SAVING DEVICE.

THE amount of light given by a gas burner depends, not on the quantity of gas consumed, but on the character of the flame produced. A gas flame comprises a central dark area and an outer bright yellow spread, the latter, of course, giving the light. As the pressure is increased, the area of the dark part increases more rapidly than the yellow part, until a degree is reached beyond which the dark area increases at the expense of the light-giving part. Under such pressure, one can increase the brilliance of the jet by partly turning off the gas. While the ordinary gas cock thus provides means for regulating the pressure to the proper degree, the

average man does not care to be bothered with it, and prefers rather to turn on the full flow of gas, even though it results in less light. For the benefit of the careless man, a device has recently been invented which may be applied to the gas pipe near the meter, to regulate the pressure at all burners in the house. The device comprises a casing interposed between the meter and the burners. A hollow plug fits snugly into the casing. This plug is formed with groups of small perforations, which vary in number corresponding with the numerals printed on the end of the casing. A number of large openings are also provided to admit gas into the plug. A handle is hinged to one end of the plug, by which the latter may be moved to bring any of the groups of perforations into line with the outlet pipe above, and thus govern the pressure of the gas as it passes out of the plug to the burners. A socket is provided in the end wall of the plug, in which the handle may be folded, so that it will lie flush therewith, permitting the cover piece to be swung down. The latter is held closed by snapping it over a lug. Central groove is formed to provide a certain amount of gas to flow constantly, no matter in what position the plug is turned. In a recent test of this gas check a saving of forty per cent. was effected without diminishing the amount of light given. The flame produced was steady, and the flickering and noise which are commonly indicative of an uneconomical use of gas were entirely avoided. A patent on this gas-saving device has been secured by the Standard Development Co., 714 Union street, New Orleans, La.

PLUMBING AND ELECTRICAL.

J. W. Behm, electrician, Moose Jaw, has completed the work of installing the electric fixtures in Smith's Hall and also the hall over Marlatt's drug store. Both these halls have recently been renovated and fitted up.

Two big new railway generators have been installed at the Cataract Power company's sub-station, Hamilton. The new generators have an aggregate of about 2,600 horse-power, and this extra power will be used on the street railway.

Ald. Hugh Wallace and Steve Mellon, Hamilton, have been chosen as delegates to represent the Ambitious City at the Winnipeg Convention of Master Plumbers. Harry Mahoney, Guelph, and F. G. Johnston, Ottawa, are two other Ontario delegates who will make the trip. London will likely send a delegate also.

Next Thursday will be a gala day for Toronto and Buffalo master plumbers, over 100 from the latter city being booked to visit Toronto, coming over on the first boat and returning on the last, and having fun, fast and furious, in the meantime. The oval at Hanlan's Point has been secured and, besides a baseball match, quoit matches, races and the postponed tug-of-war will be pulled off. R. J. Lloyd will cater and dinner will be served promptly at 12 noon, the Toronto delegation being scheduled to cross the water at 9.30 a.m. Supper will be served at 4.15 p.m. The committee arranging the good time are Messrs. K. J. Allison, J. E. Fullerton, D. Menzies, Fred. Armstrong and W. H. Meredith, and they have arranged with the weather man for a wet day.

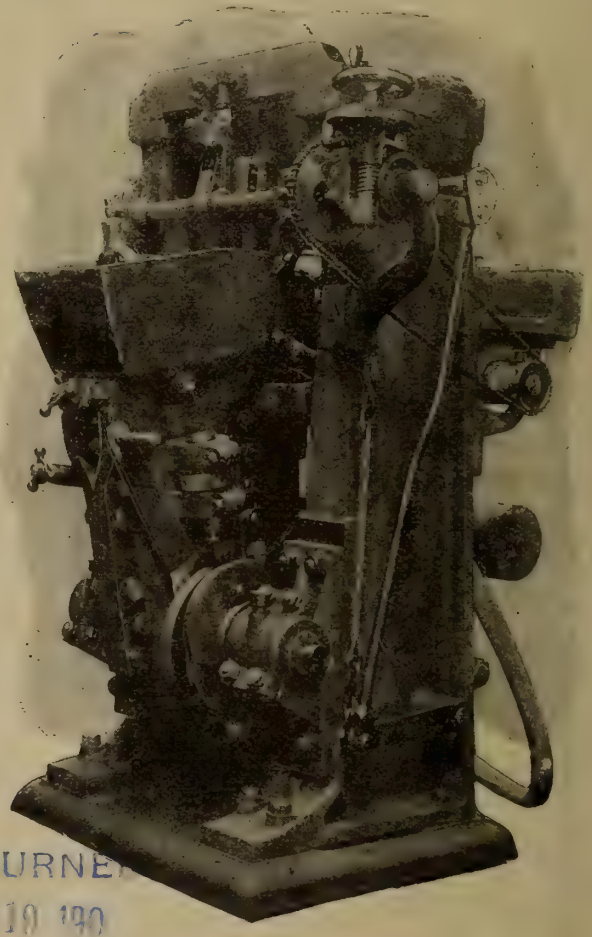
THE MAKING OF RAZORS

THE three essentials of a good razor are fine steel, temper and edge, and unless all three are combined the result is sure to be failure. If in the first place the steel be of poor quality, no amount of tempering or subsequent grinding will overcome the primary fault, or make up for what it originally lacks. On the other hand, many a blade has been spoilt and made totally unfit for the purpose for which it was intended by carelessness in tempering or uneven grinding, so that perfection can only be expected where all three attributes are found in unison.

Of the several processes through which each blade goes, that of grinding is, perhaps, the most important, setting aside of course the first consideration of good steel. The grinding is in some respects the finishing touch, and if improperly done will utterly destroy whatever good qualities the blade originally possessed. Therefore the cutler who seeks to turn out a first-class razor must be careful to secure grinders of reliable character with uniformly steady hands. As every employer of labor knows, a workman of the infallible type is a "rara avis," so in this, as in hundreds of other manufacturing peocesses, hand labor is being replaced by machine work.



The distinction of having invented an almost perfect machine for grinding belongs to the Wilkinson Sword Co., of London, Eng., sword cutlers to His Majesty the King, whose razors and "Shavers" are daily becoming better known and appreciated by Canadian users and the trade alike. We illustrate their invention herewith. Formerly the workman with more or less unsteady hand ground one side of the blade and then the other on a revolving wheel, and it need hardly be pointed out that under such circumstances there was always a large element of chance in the finish of a razor. Here, however, when once the wheels are set to a perfect guage, any number of blades can be ground with an unvarying accuracy that was an utter impossibility when the process was done by hand. In this illustration the blade can be seen in position ready to pass between the twin grinders.

The Wilkinson Sword Co. use nothing but the very finest sword steel in the manufacture of all their cutlery, which embraces single and double edge hunting knives, carvers, razors, "shavers," and pen and pocket cutlery. The steel is produced in their factories in Acton and Sheffield, where the process of manufacture is carried on. Only the best and most experienced men are employed, and "Sword Steel" cutlery is becoming the standard in the Old Country.

In the face of very stiff German and American competition the Wilkinson Patent Safety Shaver enjoys remarkably large sales in many countries, and its points of excellence are being duly recognized in Canada also. It is very similar in appearance to other safeties, but it has one feature that is distinctly different—the spiral roll guard. This anti-friction roller feeds the lather on to the edge of the razor and the part to be shaved, instead of removing it as is the case with many other guards, and it also induces an oblique motion of the razor, which is an acknowledged aid to easy shaving. These "Shavers," as also the razors, are packed in neat cases, single, or containing from two to seven blades. There are also combination sets consisting of razor, strop and stropping machine, an excellent device for retaining the perfect edge on the well-made "Wilkinson" razor.

Mr. R. G. How, of 204 St. James street, Montreal, who represents this house in Canada, is now calling upon the trade, and will shortly open up permanent offices in Montreal, in order to develop Canadian business and give close attention to the requirements of the trade.

The Wilkinson Sword Co. hold many appointments and awards, one of their latest being the gold medal at last year's International Exhibition at the Crystal Palace, London.

CURRENT MARKET QUOTATIONS.

July 28, 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

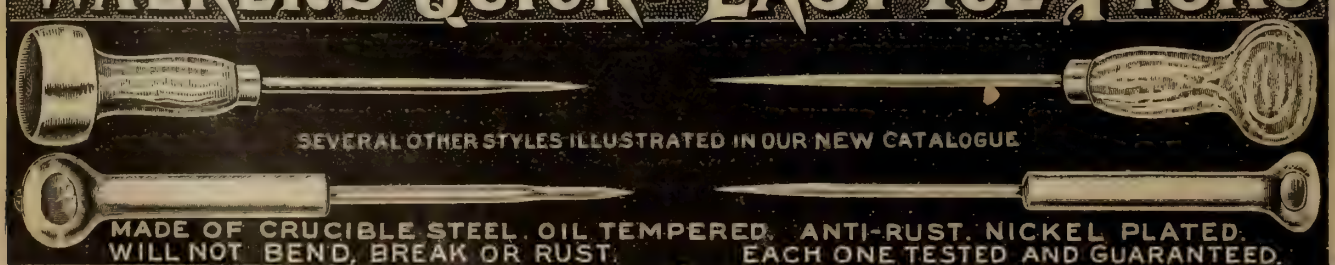
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.



Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

The Fisk
Detachable Motor Tire

The safest tire made. See how it curves around and forms a flat and solid base, which is fastened to a flat and solid rim.

This adds fifty per cent. to its safety. There's something to travel on, even when the tire is deflated. No matter what happens, it can't come off the wheel and there's absolute freedom from creeping or rolling.

Attachment or removal is quick and easy, with an ordinary wrench.

Manufactured in Canada solely by

Davidson's Cereal Steam Cooker and Vegetable Boiler

Stew Pan with Enamel Cover

Wire Egg and Vegetable Boiler

White Cereal Dish

Using the well known application of Steam in a novel and convenieu manner.

The inside Cereal Dish being suspended in the Stew Pan by means of a useful wire basket ; is always surrounded by steam, ensuring the perfect and hygienic cooking of the contents.

The Wire Basket has many additional advantages, as it can be used for either boiling Eggs or Vegetables, and having wire handles at the sides it is very easy to handle.

The inside Cereal Dish is readily removed, and can be used on the dining table in a plated receptacle, or without, as this dish is always supplied in White Enamel only.

SIZES AND DESCRIPTION

No. 13—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; One 3 quart Cereal Dish.
No. 15—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; One 5 quart Cereal Dishl
No. 35—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; Two Cereal Dishes, one each 3 and 5 qt.

Made in "Premier" and "Colonial" Enamelled Steel Ware.

CANADIAN NATIONAL EXHIBITION

AT TORONTO, AUG. 26 to SEPT. 11.

$45,000 in Premiums. - $38,300 in Attractions.

The Irish Guards Band

By permission of His Most Gracious Majesty King Edward VII, the band of the Irish Guards, His Majesty's favorite household band and the finest military musical organization in the Empire, will give two concerts each and every day.

Art and Treasures

In an especially built, extensive, fire-proof art gallery will be presented the grandest collection of art and art treasures ever got together on this continent, including loans from the King, the Corporation of the City of London, the great English Universities, the Republic of France, South Kensington Museum, Lord Strathcona, the Lieut.-Governor of Ontario and other distinguished bodies and gentlemen.

Coronation Picture

By special command of His Majesty the King, Abbey's noted and historic painting will be on exhibition during the entire fair.

Fall of Port Arthur

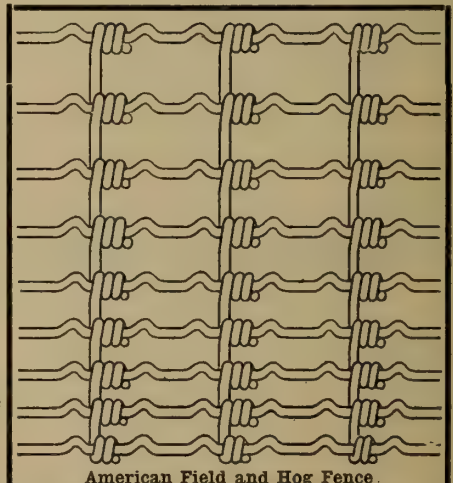
The greatest pyro military display ever produced before the Canadian people. Scenes in this most recent of the world's most appaling event will be vividly portrayed with real Japanese and Russian soldiery taking part. The fireworks display will be on a brilliant scale, introducing new features of an Oriental character.

Other Things to See

The Process Building, Samples of all the Industries and Resources of the Country, Thousands of Horses, Cattle, Sheep, Swine, Poultry and Dogs, All Canadian Cereals and Minerals, good Trotting and Pacing, a superb Variety Show, the World's latest Inventions.

Special Excursions

Special cheap railway and steamboat excursions have been arranged. Enquire of your nearest station or ticket agent for rates.



W. K. McNAUGHT, President.

Western Hardware and Stove Dealers' Convention

Held in Winnipeg, July 26th and 27th, 1905.

WHEN the organization meeting of this association was held in Winnipeg one year ago, during the week of the Dominion Exhibition, it is doubtful whether the most sanguine of the hard-headed business men who were behind the movement really believed that in twelve months the association would make the substantial progress which was shown at the annual convention held in Winnipeg last week. This progress was evidenced by the unmistakable figures of the secretary's reports and the best proof of the standing of the association is afforded by the membership list printed below. The list includes the large majority of the substantial hardwaremen of Manitoba. It is true that there is still a very small representation of hardwaremen from the Provinces of Saskatchewan and Alberta —if it be permissible to anticipate the effect of the Autonomy bills—and it is true that not all of Manitoba is yet included in the association; but it must be remembered that the active work of organization has been in progress little more than four months since Secretary McRobie's appointment. The next meeting will undoubtedly show a big increase in the membership. In the meantime the following list is very satisfactory:

Leon Abramovich, Winnipeg.
Ashdown & Bossons, Swan River.
Allis & Weidenhammer, Grand View.
Allaire & Bleau, St. Boniface.
Anderson & Thomas, Winnipeg.
F. Anderson, Kenton.
F. J. Arthur, Kenton.
J. H. Ashdown Hardware Co., Winnipeg.
T. J. Agnew, Prince Albert.
Black Bros, Minnedosa.
J. E. Birch & Son, Roland.
D. Bradley, Holmfield.
Brown & Armstrong, Carberry.
W. J. Bristo, Glensmith.
G. N. Brown, Stonewall.
A. P. Brown, Morden.
Brandon Hardware Co., Brandon.
Babb & Kirkland, Portage la Prairie.
Butchart, Adkin & Haslem, Rapid City
R. Bogue, Moose Jaw.
R. J. Brown, Crandall.
Benttner Bros., Carman.
C. A. Baskerville, Winnipeg.
C. C. Baker, Gilbert Plains.
J. O. Cadham, Portage la Prairie.

OPENING MEETING.

President J. A. Lindsay was present for a few minutes at the opening of the first meeting on Wednesday morning, July 26. Owing to illness, which was very much regretted by his many friends in the association, he was unable to stay for the meetings, and the chair was taken by A. J. Falconer, of Deloraine. In opening the meeting, Mr. Falconer reviewed the work of the association. He spoke as follows:

Chairman's Address.

"Gentlemen of the Western Retail Hardware and Stove Dealers' Association, I occupy this position to-day on

account of the illness of our president, Mr. Lindsay, and in the absence of our vice-president, Mr. Wyatt. You all agree with me that Mr. Lindsay is the best man we have got for the position he holds, and we regret exceedingly his ill health, but we hope soon to see him in harness again. He was here for a few moments this morning, but suffered from a nervous attack, and was compelled to go away again. We have not a very representative meeting here to-day, but all those who are here are very much interested in this association work. I think, perhaps, the Summer time is not the best time in which to hold our annual meetings; we should have a much better gathering were it held in the Winter.

"I hold in my hand the verbatim report of our last meeting. The item which will concern the meeting most is the appointment of a secretary. The executive left it with the association at Winnipeg to choose a man, and they have chosen Mr. McRobie, and I think they are wise in their selection. They have got a good man. It is very gratifying to me to be able to tell you that of all the hardwaremen called upon, we have only received two absolute refusals to join our association, and we have, I believe, about 140 paid-up members and a few not yet paid up. Now, that is very good for one year, and we hope to increase that by extending into the Territories and other places in Manitoba, where, up to the present, our secretary has been unable to call. There will be more business brought before you to-day, and I won't keep you very long with any remarks of my own. It was thought since this meeting was so small that we defer the election of officers till the Winter. That is, of course, a matter for yourselves to decide. There is also a matter that affects every one of us that will be brought up, and that is the credit system. It is highly desirable that considerable credit should be done away with, and the time for giving credit shortened. I think that from November to the beginning of April we might do a cash business only, and from that time we might give credit. I am pretty sure that we have to do business on smaller margins than the department stores, and they get cash for their goods. Mr. Price will have something to say in this matter."

Committee Report.

The committee composed of J. A. Lindsay, Oliver Gilmer, H. S. Price and C. A. Baskerville, appointed to secure a secretary-organizer for the association, reported the engagement of J. E. McRobie, and on motion of W. H. Gordon and J. A. Gilhuly, the report was unanimously adopted.

Secretary's Report.

Secretary McRobie then presented the financial report of the association showing a satisfactory balance in the treasury. His general report was as follows:

"In presenting you this, my first report since my appointment as your secretary, treasurer and organizer, I desire to thank the many dealers throughout the country, whom I have had the pleasure of calling on. I must say that I have been met by them one and all in the most friendly spirit, and when I state that out of some hundred dealers called on, of that number only six refused to become members of your association, it is a pretty sure indication that this association is wanted by the dealers.

"I greatly regret that I have been unable to call on the majority of the trade previous to this meeting. I found after I started out that it would take a great deal longer time than I anticipated, inasmuch as I had to settle each town one with the other. In the several districts the greatest difficulty I have had to contend with (and in making this statement I want you to understand that I do so in the best interests of yourselves) was the want of that confidence that should be between men in the same line of business as yourselves, and the great difficulty of bringing you together to talk it over and come to some mutual understanding on business lines equally beneficial to you all.

"I have had, from a standpoint of success, I think, a pretty good showing, as referred to above. I was enabled to call on a hundred dealers, and all so canvassed became members of your association or expressed themselves in favor of it, but owing to so-called want of confidence in his opposition, none of them would be the first to put aside this false feeling and meet his brother dealer as he should. And right here I would like to say that the impression that would be forced upon anyone in my position if he did not know you, probably better than you knew yourselves, would be that according to each of your opinions of each other there was not an honest hardwareman in the province to-day.

"I have not gone into a detailed statement here of the work accomplished, territory covered, or members added; this can be had if necessary, from the roll book or traveling expense account.

"It has been demonstrated that with a little co-operation on the part of each, price cutting on staple lines can be, and has been, overcome in a good many sections. Why not in all? And if you can accomplish this on the price question, why not on credits?

"There is not one of you but has expressed himself as being strongly opposed to the system. Why not act upon it as you are doing on staple goods? Cut the system down to a minimum as a start, give it a fair trial together, and I am sure that it will work to your advantage.

"Now, gentlemen, I could continue for a long time to enumerate the many instances that have come to my notice while traveling among you, of trifles that are preventing a great number of you from doing your business as it should be done; small things in themselves, but enough to cause you a great deal of unrest, loss of legitimate profit, and, what is of a great deal more moment, loss of that business integrity, and relish of a hearty enjoyment of your daily business that most of you would otherwise enjoy from day to day.

"Gentlemen, this matter lies in your own hands; it is up to yourselves to to make this association a fact, and a solid fact at that. You have the initiative in your own hands. It's for you to decide. Your secretary cannot do your work; he can help you to accomplish it, but you must work, and work consistently with him or otherwise it won't do any good.

"Your association does not desire a membership from any but those who join with the determination to maintain and carry out any arrangement that may be entered into from time to time.

"(Signed) J. E. McROBIE,
"Secretary-Treasurer."

On motion of J. E. McRobie and W. J. Coleman, the report was adopted.

Two Associations or One?

Chairman Falconer then raised the question of the advisability of continuing both the Western and Manitoba Associations. "We meet here as the Western Association, and as you know we have also the Manitoba Association, of which I happen to be president, and Mr. Johnson, who is here with us, is treasurer; and I cannot see myself what the sense or object can be in having two associations when the western can do the work of both, and, as a matter of fact, is actually doing it now. For my own part I would like to see the western absorbed, in the meantime anyway, as we have really no need for two sets of officers. I should like to hear from Mr. Johnson in this matter."

E. H. Johnson (Brandon) rising, stated that he had $207 on hand belonging to the Manitoba Association. He also said: "I think one association is all we want; in fact, I have done no business since Mr. McRobie was appointed. Since I returned home in February I have not taken more than $10, so I really see no necessity for this Manitoba Association." The chairman said that this was the general opinion that there was no need for the two associations, at least not for a good many years, and if it was needed in the future it could be revived.

The Credit System.

The burning question in the west is the evil of long credits and the meeting had not been long in progress when the question came up for discussion. It was introduced by H. S. Price, of Boissevain, who spoke in part as follows: "This question was broached last meeting, and since that time I have been making inquiries, and speaking to different hardwaremen in the country, with the result that the opinion of all seems to be that something should be done to shorten credits. My own opinion is that it would be best to close down all credit after the 1st of November each year until the following 1st of May, as in that way we should have six months in which to clear our accounts of anything left outstanding. There is, in my opinion, no reason whatever why farmers should not be able to pay for their goods within the time mentioned. We all have the same troubles in connection with the credit system, and there is no reason why matters should not be improved. I do not know how such action would affect the hardware business. It

TACKS
WIRE
Prompt Shipment
The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

would certainly have some effect. I think this matter well worth discussing by the members of this association."

Chairman Falconer agreed that it was a matter of vital importance to the hardware trade in Manitoba. He believed it would be a very good thing if business could be done for cash only between Nov. 1 and April 1.

R. J. McConnell, Carman, agreed with Mr. Price, and would like to see his idea carried out. He said that sometimes the stories of price cutting which got about were not always correct. When a farmer told such a tale, it was only fair to each other to find out if it were true, because sometimes a farmer might be mistaken, and sometimes he might be a liar. (Laughter.)

Fred. Babb, Portage la Prairie, said: "I am very much pleased to hear from my friend from Carman. We have a large dealer in our town who, up to the present time, has refused to join the association, and, unfortunately, until we can get him into line very little can be done with us. Our old credit system has been run so long that it is like pulling teeth to change it, but all I can say is that the next time our secretary comes to Portage I would suggest that he bring a shot gun. He might be able to use it. I am sorry to have to say so, but I am afraid that while things are as they are in Portage la Prairie, we could not adopt the suggested system."

W. J. Coleman, Darlingford, said that in his part of the country the crops were a little later than elsewhere, and suggested the 15th of November to the 1st of May as a better period. He advised Mr. McRobie to get hot after Morden, as that town was the greatest stumbling block to good work of the association in his town.

E. H. Johnson explained the peculiar conditions in Brandon. "With regard to the credit system in Brandon, we are not like smaller towns. The cutting off of the credit system during the period mentioned, with them, would have to be limited to farmers. It could not apply to the city trade. The association works well in Brandon, in spite of the fact that the largest dealer there does not yet belong to it."

J. Rinn, Elm Creek, was emphatic in his denunciation of the credit system. "Credit is the ruination of retailers. Wholesalers are prompt enough to draw a line at 30 or 60 days, but we have to give unlimited time to our customers. We find our purchasers obtain money by some means to forward to Eaton or Stanley Mills, and if we did a cash business we would certainly get a portion of this money."

General Discussion.

The chairman said he had it on good authority that the cash sales at Eaton's the opening day amounted to $40,000.

Secretary McRobie believed the best remedy would be a big difference between the cash and credit prices of goods.

Fred. Babb (Portage la Prairie) said that there were many straight and many crooked men, and he was afraid in many cases if credit was discontinued during five or six months each year that some merchants would use it as a means of getting business from farmers who were known to be good by offering them long credit.

Mr. Rinn thought the association could get the wholesalers to assist them.

Mr. Babb thought not, as many agents would even peddle to the farmers when they could not get what they thought was enough business out of a town.

Mr. Curran was of opinion that before anything very substantial could be effected, the wholesalers would have to join with the association.

Decision Reached.

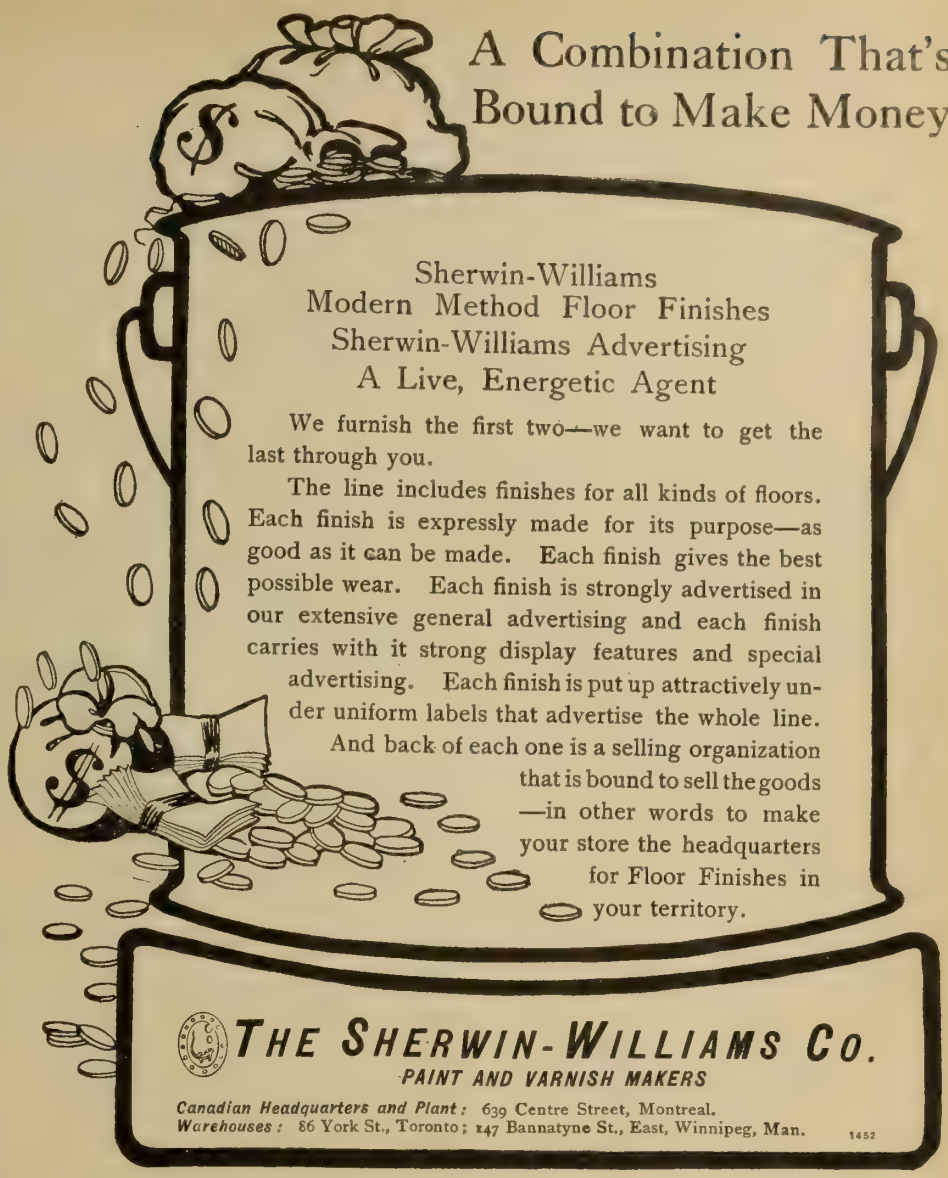
Finally, on motion of W. J. Coleman, Darlingford, and J. McNaughton, Killarney, the following resolution was adopted: "That this association instruct our secretary to write all members of association suggesting a meeting of members of local districts to meet and arrange the curtailing of credits to suit their particular districts, suggesting a date when books shall be closed in each season, and suggesting, if possible, to have all books closed from Nov. 1 to May 1."

Notice of Motion.

W. Gordon, Winnipeg, and A. P. Macdonald, Winnipeg, then handed the secretary the following notice of motion: "I will move, at our next semi-annual meeting, February, 1906, that the Manitoba and Western Retail Hardware and Stove Dealers' Associations be merged into one, and known as the 'Western Retail Hardware and Stove Dealers' Association.' "

Price Committee.

A committee, composed of the gentlemen whose names appear below, was appointed to confer on the remedy for price cutting. This committee consisted of Messrs. Rinn, Shannon, Gilhuly, Martin, Taylor, McNaughton, Babb, Coleman, Curran, Barr, Gordon, McDonald.



The convention then adjourned to meet Thursday morning.

CONCLUDING SESSION.

At Thursday morning's meeting, Robert Wyatt, Winnipeg, presided. He said: "I am sorry not to have been able to attend yesterday, more particularly as I am to some extent unacquainted with the business transacted. However, the matters to be considered are in your own hands, so I will not take up your time with any remarks of my own, but just proceed with the business of the day. I might say that the questions before us for discussion this morning are 'Insurance' and 'Prevention of Price Cutting.' "

Constitution Revision.

A motion was made by W. H. Gordon, seconded by B. McConnell, that a committee consisting of H. S. Price, Boissevain, the secretary, and the mover

be appointed to revise the constitution and by-laws of the western association, such revisions to be voted on and passed at our next meeting in February, without the usual four weeks' notice of motion as per our present by-law. (Carried.)

Fire Insurance.

The question of mutual fire insurance was then introduced by the chairman, who regretted the absence of Oliver Gilmer, the member most interested in this subject.

A. P. Macdonald did not think that anything could be done in the matter at this meeting as he did not think it large enough. He believed the principle was good, but he would do nothing until the February meeting.

Secretary McRobie suggested the appointment of a committee to take the matter up and get it in shape before the next meeting. Definite information was required.

On motion of A. P. Macdonald and E. H. Johnson, a committee was appointed, composed of Messrs. Gilmer, Babb, McRobie and Thompson, to gather information about the mutual fire insurance systems of other hardware associations and report at the next meeting.

Price Cutting.

E. H. Johnson thought the only feasible course was for the secretary to take measures to prevent price cutting, using the Winnipeg prices as his basis. Every dealer knew his freight rates from Winnipeg.

Fred. Babb, Portage la Prairie: "I may say that the way we arrive at it is by calling a meeting of the merchants of several towns in our district and adjusting figures, and so far the scheme has worked satisfactorily. I really think that the only way to arrive at the matter would be for the secretary to suggest the prices and the merchants then to arrive at a satisfactory agreement according to local conditions."

J. McNaughton, Killarney: "The line of action we took last April is working very satisfactorily, and I think myself the only proper way is to group the different places into districts, making each district as large as possible, then have the merchants form their own lists, putting their own prices, when I think they would stay by them."

W. J. Coleman, Darlingford: "With regard to forming into districts, I am not quite sure that this would be as satisfactory as could be desired, particularly for places on the border of two or more districts. After all, the freight rates are not so very different, and I think it would be desirable to have uniform prices if possible."

E. H. Johnson, Brandon: "Our district make their own prices, and when there is a change they are easily adjusted. Think of the immense amount of trouble involved if the secretary had to advise every change."

H. S. Price, Boissevain: "I think that can be easily adjusted. Suppose, for instance, there was a change in the price of lead or oil, then it would be up to the secretary to advise us, when we could make the necessary change. My idea of a uniform list was as a starter only; after it was once going, the maintenance of the system would be easy."

Secretary McRobie: "What I would like this meeting to decide, as it will be too late at the next meeting, is to set your base on wire and nails and staple goods, so that when jobbers go out next Fall and quote for next delivery, dealers can be notified of a uniform selling base from Winnipeg, and you will all have the same price."

Decision Reached.

Finally, on motion of G. H. Clare, Saskatoon, and R. J. McConnell, Edmonton, it was decided that the Winnipeg retail prices be taken as the basis for outside prices, freight charges to be added.

Letters.

The following letter was received from Hardware and Metal:

Winnipeg, July 27, 1905.

J. E. McRobie,
Sec'y Retail Hardware Association,
Winnipeg:

Dear Mr. McRobie,—It is not necessary for us to assure you that in your efforts to promote the organization of the Retail Hardware Association you may always rely upon the hearty co-operation of Hardware and Metal. But we are anxious that the association should be given much more prominence in our paper, as we believe that publicity in a strictly trade paper (the circulation of which is confined entirely to hardwaremen) will always be a benefit to you. We would like to see an Association Department in our paper every week or every alternate week, and we are prepared to place at your disposal a page of the paper every week (if you can use that much space) to be devoted entirely to association news. In the editing of that page we would, of course, require your constant assistance in furnishing us with the right kind of news.

Whether you see fit to accept this offer or not you may rely upon the support of Hardware and Metal whenever you require it.

Yours truly,
The MacLean Pub. Co., Ltd.
Per F. R. M.

Letters of regret at their inability to attend were read by Secretary McRobie from Messrs. Comer, Calgary; Johnston, Ninga; Priestholdt Bros., Hanley, and others.

Thanks to Press.

On motion of A. P. Macdonald and H. S. Price, a hearty vote of thanks was passed to Hardware and Metal and the Commercial for assistance given the association since the last meeting.

A. H. Bailey responded for the Commercial, and F. R. Munro for Hardware and Metal. Both speakers expressed their appreciation of the thanks tendered them for the efforts of their papers to assist the organization. They urged the association to make greater use of their trade papers.

The convention then adjourned.

NEW STEEL COMPANY.

London capitalists are interested in the new steel company, to be known as the London Tool Company, and which has secured a site of eight acres on Lottridge street, Hamilton. It is the intention of the company to erect a large factory.

There are **HAMMERS** *that "Knock," and there are* **HAMMERS** *that convince. We employ the convincing kind; for instance, we say contact with the Hammer will not discharge an*

BUILDING AND CONSTRUCTION

BUILDING NOTES.

A. Orr, Hamilton, is erecting a $2,100 residence.

A. J. Kerr, Hamilton, is to erect a $1,900 residence.

The Ottawa Fair Board are to erect a new Dairy Building.

Thomas McMaster is to erect a new residence at Guelph.

M. Rawlinson is to erect a $15,000 warehouse in Toronto.

H. G. McMahon is erecting a $2,100 residence at Hamilton.

The Standard Meter Co. are to erect a $10,000 factory in Toronto.

Wm. Grayson, Moose Jaw, is erecting four new stores, to cost $12,000.

Morrison & McDougall are erecting a cement block store at Arcola, Assa.

The Bank of Hamilton is to erect a modern fire-proof office building in Hamilton.

The Western Commercial Co. is erecting a block of store buildings at Saskatoon, Sask.

A new $2,000 schoolhouse is being erected in Artemesia Township, near Flesherton.

Work on the new buildings for the Wampole Mfg. Co., at Perth, has been commenced.

The Hamilton Bridge Co. have secured the contract to build a steel bridge at Owen Sound.

Thompson & Wright are working on a $2,500 addition to the Laycock school at Brantford.

Work on the extension of the Intercolonial Railway station at St. John has commenced.

R. W. Dunsmuir has let the contract for a new residence at Victoria, B.C., to F. J. Mesher.

The McLaughlin Carriage Co., Oshawa, are to construct a five-storey brick block at Winnipeg.

Sixteen new buildings have been erected, or are in the course of erection, in Treherne, Man., this year.

Fraser Bros., Strathcona, Alta., have commenced the construction of the Coney Elevator at Ponoka.

A Pittsburg Co. is said to be preparing plans for the erection of 300 houses in Hamilton, for the Canadian Westinghouse Co.'s employes.

Mr. R. L. Borden, leader of the Conservative party, will commence almost immediately the construction of a fine residence at the capital.

The construction of the new Canadian Bank of Commerce Building, Prince Albert, has been awarded to Contractor Holmes. The building will cost in the neighborhood of $14,000.

Extensive alterations are being made at the School of Science building, Toronto. Work has also been commenced on the new convocation hall in connection with Toronto University.

The value of new buildings for which permits have been taken out in Hamilton this year amounts to $844,025. The value for July was $126,580, or $41,880 more than for July last year.

A new planing mill, to cost $100,000, is to be established at Douglaston, N.B., by Swedish capitalists, to export planed lumber for the English, Australian and American markets.

L. H. Packard & Co., manufacturers of shoe dressing, etc., Montreal, have found their present premises on McGill street too cramped, and are planning to erect a new factory building 100 x 100 feet, on St. Antoine street.

Messrs. McClatchie Bros., retail hardware merchants, of Cowansville, Que., are erecting a new store 100 x 32 feet, to cost in the neighborhood of $10,000. The building will be forty feet high with thoroughly modern equipment.

The Northwest Construction Co., operating at the Newcastle Island quarries, at Nanaimo, has received a contract for stone for the United States navy drydock at San Francisco, requiring nearly 200,000 cubic feet of stone.

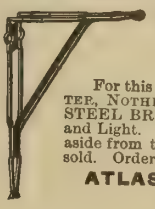
In spite of strikes in the building trades in Montreal, the month of July exceeded the same month last year by many thousands of dollars. The building has been mostly of a residential character in the north and west ends of the city.

The bricklayers on one of the biggest jobs in Montreal went out on strike Monday of this week. It is claimed that this strike is not in sympathy with the carpenters, but rather because the men objected to continue work where operations are under police protection.

Work on the construction of the Canada Car Co.'s plant at Lachine has been completed so far as the exterior is concerned. Machinery is rapidly being installed, and it is expected that the operation of the plant will begin in September.

The following building permits have been issued at Toronto Junction: S. Womersley, two brick dwellings, $1,900 each; Wardell and Speers, two brick houses, $1,900 each; Alex. Brown, brick house, $1,700; S. E. Jewett, three pairs of houses, frame, $1,200 each.

Montreal and New York capitalists have organized a hundred thousand dollar company to erect a magnificent new Summer hotel on Lake St. Louis, to be ready for business next season. The hotel will be close to Bellevue Station, on the New York Central, about thirty-five minutes' ride from Montreal.



John McDonald & Co., Chatham, N.B., are erecting a business block for Hoffman & Sons, to cost $11,000, and to be fitted up with modern plumbing arrangements. They are also building a store for John Gray, to cost $2,000, a $3,000 residence for Robert Ritchie, Newcastle, and a $2,500 house for James Shields, Chatham.

The Grant & Smith Construction Co., who have the contract for the cement work on the new C.P.R. bridge at Saskatoon, have completed their first ce-

ment pier at the south end of the bridge, and a coffer dam has been constructed for the second, where the excavation is in progress. The company are putting on another pile driver in order to hasten the construction, and a large force is now at work excavating for the pier on the north end of the bridge.

Considerable building is going on in Sarnia, largely to supply the demand for residences. The houses going up are of the better class, the great majority of them to be occupied by their owners. This is one of the best signs of the progress and prosperity of a town, and that Sarnia is enjoying a good, steady boom cannot be disputed. There are no empty houses that are of a comfortably habitable nature in the town, and everything denotes a healthy condition of affairs. Geo. A. Proctor has several contracts on hand, including house for Andrew Bradley, a house for John O'Rourke, a residence for A. C. Clark, residence for F. F. Pardee, and A. Batty's two stores. Among other contracts H. Johnston has residences for J. A. McCrea, Jos. Breakey, Dr. McDonald and George McMillan, while D. Goodall is working on a residence for Malcolm McKenzie, and James Shanks on one for R. G. Towers.

TORONTO BUILDING PERMITS.

Wm. Spence, brick dwelling, Davenport road, $2,400.

W. M. Alcombrak, dwelling, Havelock street, $2,600.

J. D. Farquhar, one pair roughcast dwellings, Logan avenue, $3,000.

SO CHEAP. SO GOOD.

Maximum Light Glass is so cheap that it could not be cheaper, so good that it could not be better. It pays for itself in a year. It should be in every home and building that has a trace of darkness.

SO CHEAP. SO GOOD.

Why is

MAXIMUM LIGHT GLASS

not in

every home and building that has a trace of darkness? Because Hardwaremen are not fully cognizant of the ever-present need for it, and how they might share in supplying that need. When a Hardwareman realizes these undeniable facts, he does two things—he writes for samples and booklet; he gets a supply of the glass. May you reason to your profit! It awaits you.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

CANADA'S trade in the year just closed was $465,228,307, while in the previous year it was $464,981,972. There is an increase of $10,451,000 in imports, and a decline of $8,560,000 in domestic exports, and of $2,000,000 in foreign exports. The feature to be noted is that trade, having doubled in nine years, has become almost stationary, and that there is a decided fall in exports. It could not be expected that the rate of increase shown in recent years could be maintained, and there is no ground for alarm in the fact that it has ceased. The rapid growth of the west in population has probably fully compensated for any falling off in exports.

The Canada Glue Co.'s plant at Brantford is nearing completion.

The Hewson Woolen Mills at Amherst, N.S., are extending their plant.

Iron ore is being shipped from the mines at Calabogie, near Renfrew.

A. P. McLeod is to establish a sash and door factory at St. Peters, N.S.

A wireless telegraph system is now in operation between Montreal and Quebec.

The C.P.R. Co.'s Atlantic steamers made a profit of $200,000 during the year ending June 30.

The railroads of the United States will consume probably 2,100,000 tons of steel rails in the calendar year.

Stratford has passed a by-law voting $30,000 as a loan to the Thread Mills, Limited, to aid in establishing a factory there.

A branch plant of the Vulcan Soot Cleaner Co., of Pittsburg, may be erected at Hamilton to supply the Canadian demand.

The St. Catharines tannery is to be enlarged, and a plant will be installed for the manufacture of high-grade leather shoe laces.

A company has been organized in Vancouver to manufacture the "All Right" extension ladder. A. P. May is president of the company.

The steel rail mill of the Dominion Iron & Steel Co. has been put on a double shift for the first time since it has been in operation.

The Union Steamship Co. are to bring out a steamship from Scotland to run on the Montreal-Lake Superior line. It will be the largest freight boat in Canada.

Prospects at the mills of the Montreal Cotton Co., of Valleyfield, Que., are now very bright. Seven hundred and fifty additional looms will be put in operation next week.

Stratford has decided to grant $30,000 to the C.P.R. to aid in purchasing a right of way to that city. The road is to be built by 1907 and to connect with the Goderich and Ingersoll branches.

The Victoria, B. C., Machinery Depot have in hand the construction of a Cyclone water-tube boiler, 300 horsepower, working up to a pressure of 300 pounds, for furnishing heat to the retorts of the new turpentine works in that city.

Owing to a scarcity of wheat at Fort William a broker who had a contract to deliver a certain amount in July found it necessary to re-ship 140,000 bushels back from Kingston by boat, this being the first wheat cargo ever passing westward through the "Soo" Canal.

M. A. Halliday, owner of the electric lighting plant supplying Chesley, Ont., with light, is constructing a concrete dam in place of the former one, which will raise the water of the river two feet higher than at present. Thus he will get the extra power required by the increased lighting demands.

The Robb Engineering Co. have secured orders for one 150-horse-power boiler for the Good Shepherd Asylum, Quebec; and 80-horse-power engine and boiler for the Electric Light Co., of Golden, B.C., and a 50-horse-power engine from Ahearn & Soper, Limited, for the Dunlap Tire Co., Toronto.

In the six months ending June 30 the output of sheets and tin plate by the American Sheet & Tin Plate Co. is said to have exceeded the output of the same period in 1904 by nearly 40 per cent., amounting to about 550,000 tons, or at the rate of 1,100,000 tons for this year, as compared with 735,489 during all of 1904.

Neepawa, Man., is considering a project to secure water-power from the White Mud River. The chief points are: It will cost $40,000, exclusive of the land covered, which will be 120 acres. The pent-up waters will aggregate 200,000,000 gallons, and with a fall of seventeen feet will produce 400 horse-power ten hours each day, for eight months of the year.

President Mellen, of the New York, New Haven & Hartford Railroad, has announced that the company plans to substitute the overhead trolley for the third-rail system on two important divisions. The company had previously announced that owing to claims that the third rail was a menace to life, it would return to a steam passenger service, but this was strongly opposed by the cities and towns affected.

The Nicola Valley Iron & Coal Co. will start active operations on their property in the Fall, and be ready to load on the first cars that come through on the Spence's Bridge in about a year from now. So says S. Tingley, of Ashcroft, who is heavily interested in the field. Mr. Tingley staked this field 28 years ago and has hung on ever since waiting for a road. He has great hopes of the future of the property.

The Temiskaming and Northern Railway Commission has decided to go ahead with plans and specifications for the operation of the road by electric power. The cost of installing the system has been ascertained and tenders will be called for at once. The Blanche River viaduct is now being built by the Dominion Bridge Co., and will be completed in three weeks. Twenty-five miles of track have been laid north of New

Liskeard, and 100 miles more are contracted for to be built this year.

The building of the Michigan Central Railway double tunnel under the Detroit River, to cost upwards of $10,000,000, will provide an immense amount of work for a foundry plant. As the tunnel is to be constructed from the Windsor end direct to the Detroit terminal before the surface is disturbed on the Detroit side, it is quite possible that a foundry may be located on the Canadian side of the river and built of Canadian material to avoid the duties which would have to be paid on the material if imported from the United States.

Superintendent Lewis of the Algoma Steel Co., Sault Ste. Marie, Ont., and designer of the steel rail mill, has applied to the executive committee for an appropriation to erect a plant for light rails. In his report Mr. Lewis says there is at present a good market for the output of such a mill, and the market in Canada is bound to grow rapidly. A member of the executive committee, when asked if Mr. Lewis' suggestion would be acted upon, said it certainly would be as soon as the executive committee could see its way clear to do so.

Construction on the Nelson, B.C., electric power and light plant, to cost between $150,000 and $200,000, is to be commenced immediately. The contract for the hydraulic and electrical equipment has been awarded to the Allis-Chalmers-Bullock Co., of Chicago, through the Vancouver agency. This contract alone calls for an expenditure of $55,000. The contract for the hydraulic and electric equipment embraces two vertical turbine waterwheels, and one 750-kilowatt generator with a complete complement of transformers and substation equipment.

Companies Incorporated.

The Dominion Natural Gas Co., Limited, have been granted the right to increase their share capital from $500,000 to $1,000,000.

The Toronto Launch and Engine Co., Limited, of Toronto, have been incorporated with a share capital of $40,000, for the purpose of dealing in boats, launches, steam and gasoline engines, etc., and to take over the engine patents and applications for patents from J. C. McLachlan.

Northern Construction Co., Limited, of Montreal, have been incorporated with a share capital of $100,000, for the purpose of constructing private and public works of any kind. The directors are: E. M. O'Brien, J. B. Rose, E. C. Perkins, G. A. Lafontaine and W. S. Stavely, all of Montreal.

The Monarch Supply Co., Limited, Toronto, have been incorporated with a share capital of $6,000, for the purpose of operating works for the production, sale and distribution of electricity for purposes of light, heat and power. The directors are: J. S. Lovell, W. Bain, R. Gowans, W. W. McNeill, and W. F. Ralph, all of Toronto.

The Loughborough Mining Co., Limited, of Sydenham, have been incorporated with a share capital of $10,000, for the purpose of carrying on the business of a mining, milling, reduction and development company. The directors are: M. F. Westover, E. Clark, D. M. Barton, and A. H. Jackson, all of Schenectady, N.Y.; and G. W. McNaughton, of Sydenham.

No. 15. OSHAWA, ONT. August 5, 1905

A POINTER

Mr. Hardware Merchant, let us give you a pointer which calls only for a little talk and will mean much eventual business and profit for you.

When you are asked to figure on the hardware for a new building ask the architect or contractors whether they intend to use wood lath in the construction. If they say "yes" tell them that steel lath is now made so good and so cheaply that it is becoming generally adopted, and soon it will be the exception for anything else to be used.

FOR YOU

Tell them that in a few years it will be difficult to sell or rent a house which has been made dangerous for occupation by the use of the inflammable wood lath, and that it is likely the insurance companies will impose a heavy additional rate.

When this happens it will be too late, except at a heavy expense, to make the building conform to new conditions.

MR. HARDWARE MERCHANT

If you can convince them that it would be much better and cheaper to put in steel lath, write us for figures on **Pedlar's Perfect Metal Lath,** keeping in mind that, if adopted, it will be shipped direct to the premises where it is to be used, and all you will have to do will be to write a few letters.

Canadian National Exhibition, Toronto.

A YEAR OF PROGRESS.

WHILE it is true that the attendance last week at the annual meeting of the Western Retail Hardware and Stove Dealers' Association was not quite so large as had been hoped for by the executive, the actual results of one year's work are very encouraging, and the officers and members of this young association have every reason to be optimistic as to its future. The hot Summer days present many attractions in the open air, and there were many diversions in Winnipeg during Exhibition week, hence the fact that the gathering was not quite so large as in February. Another cause contributed to the same result. The majority of hardwaremen know that the association is now organized on a sound basis, that it is prospering, and that the direction of its affairs in in safe hands.

Nevertheless, those who did not attend missed a very interesting convention, and we would refer them to the full report of the proceedings appearing elsewhere in this issue. We also desire to draw special attention to the long list of members of this association, which appears in another part of the paper. That list, in which is represented the big majority of the important retail hardware firms of Manitoba, is the best possible proof of the progress made since the organization one year ago. And it must not be forgotten that the work has only commenced. Much of Manitoba remains to be visited by the secretary, and the whole of the Greater West—the new Provinces of Alberta and Saskatchewan—is yet to be canvassed. Secretary McRobie will now resume his energetic canvas for new members, and remembering the worthy cause which he has to plead, and his own ability, which fits him so well for the work, we have no doubt but that the membership list will be doubled before the semi-annual meeting in February. There is every reason to be encouraged by the showing made in one year.

ROLLING MILLS IN WINNIPEG.

WINNIPEG has not yet so many manufacturing industries but that they can be easily counted, and hence special interest attaches to the announcement that a rolling mill will be in operation in the Prairie City in a few weeks. It will be known as the "Kirkland Iron and Steel Rolling Mills," and the business will be under the management of T. M. Kirkwood, of Toronto, who was at one time owner of the Belleville Rolling Mills.

The Winnipeg mill will have a capacity of 50 tons of bar iron per day, and it will be the only plant in the Canadian prairie country. The plant is entirely new, the roll trains being among the heaviest in Canada. The plant consists of one nine-inch mill with seven sets of housings three nigh, and one sixteen-inch mill with three sets of houseings three high, including the pinions. All the machinery is set on concrete foundations 8 feet high, and fastened at the bottom with 56-lb. rails.

The building is of iron, and its dimensions are 100 x 165 feet. When completed the plant will cost about $77,000, and as work is being pushed ahead rapidly it is expected that work will commence about August 15. It was expected that the mill would have been in operation a month ago, but the delay was occasioned by the fact that the rolls purchased by Mr. Kirkwood in Bromwich, England, when there last May, have been slow in arriving.

The scrap iron which forms the raw material for this mill is now being delivered at from $5 to $7 per ton. Wrought scrap iron is the raw material wanted, and there should be no difficulty in procuring all that the mill requires within the boundaries of the Province of Manitoba, as the other foundries in the province use principally cast iron scrap.

As the freight charges on bar iron from the east amount to about $13 per ton, the western mill will have an advantage not to be despised in the race for western trade. Considering the rapid growth of Winnipeg, there can be little doubt that the present plant will have to be enlarged before the G.T.P. is completed.

CANADA WANTS CLEAN BILLS.

CLEANLINESS and decency demand that something should be done to keep filthy bills out of circulation. In Canada the evil is pretty marked and there is an increasing cry for reform.

We have heard of merchants, who have adopted the plan of only handing out crisp, new bills in change. These men are reformers and they are doing a good work, even though there may be a tinge of selfishness in it.

In the United States, every hotel and bank will always issue a clean bill on request. In Canada you generally take what you can get.

Surely sanitary reasons alone should induce the people of this country to rise up and protest against the continuance of the evil. The passing of filthy bills from hand to hand cannot but serve to spread disease germs and undoubtedly much of the sickness in the country can be traced directly to unsanitary money.

A PROTEST.

WE are glad to see that the protest which this paper entered against the actions of British Columbia and Quebec, in placing a provincial tax upon travelers, has been supported by the leading commercial men of the country. The Dominion Commercial Travelers' Association has now taken the matter up and is urging the Federal Government to disallow these two Acts. A protest from such an influential body as this should carry great weight with it at Ottawa.

The essence of federation consists in absolute freedom of interprovincial trade. Yet in both the cases cited this freedom has been seriously hampered. That the representative of a British house, resident in Ontario, should not be allowed to do business in the next province without paying an exorbitant license fee is an intolerable injustice. It invites retaliation, and the framers of the laws themselves know the disastrous effects of such a course. We trust, with the Commercial Travelers' Association, that these laws will be voluntarily withdrawn or, if not, will be withdrawn on the invitation of the Dominion Government.

NICKEL COINS FOR CANADA.

A RECENT suggestion that Canada should adopt nickel as a metal for coins, using the pure metal rather than the alloy used by the United States Government, has much to commend it. Canada has the greatest deposits of nickel in the world, and is practically the source of the world's supply. The adoption of the metal for all coins would, therefore, be a great advertisement for the country and aid

materially in the development of this branch of the mining industry.

Nickel is growing in popularity for coinage purposes in Europe, and Canada would do well to be one of the first countries to adopt the metal. Its use for fifty, twenty-five, ten or five-cent pieces would cost much less than the present silver coinage, and the Government's profits would, consequently, be larger. The day is past, however, when the public look for intrinsic value in coins, most coins being mere tokens. It is the Government's fiat that places value on the coins, and pure nickel, which will stand hard wear, would be an almost ideal metal for a Canadian coinage.

BENEFITS OF PREFERENCE.

THE London Times, in a recent financial and commercial supplement, illustrates the effect of the preferential tariff of Canada upon Canadian imports from Great Britain and the United States.

It declares that a comparison of the gross total of Canadian imports from the two countries does not fairly illustrate the effect of the preferential tariff and uses only the value of dutiable goods. Of these, Canada, in 1893, was taking rather more than 45 per cent. from the United Kingdom, 40 per cent. from the United States, and less than 15 per cent. from all other countries. By 1897, the year before the preferential provision was adopted, the percentage for the United States had risen to 50, that for Great Britain had fallen to about 30, while that for other countries had advanced to 20 or more. The general effect of the preference given to British goods appears to have been simply to arrest this process of decline for these and of gain for American and other foreign goods. Since 1898 there has been little variation in the percentage of dutiable imports in these three categories. The division has kept near the line of 50 per cent. for the United States and 30 per cent for the United Kingdom, from which the English writer concludes that the tariff preference for the Mother Country "seems just about to neutralize the natural advantages of the United States," in proximity and closer trade communication.

There are, however, classes of goods in which Great Britain cannot be expected to compete with the United States in supplying Canada, such as live animals, fish, breadstuffs, provisions, fruits, fertilizers, petroleum, turpentine and various other products which he enumerates. Accordingly, he presents a diagram showing the change in the value of dutiable imports from the two countries with these non-competing articles eliminated. This shows that the values imported from the United States in 1895 were only about $10,000,000, while those from Great Britain were about $22,500,000. The former increased and the latter diminished until values were approximately equal at about $20,000,000 when the preferential duties took effect. From that time both lines on the diagram show about an equal increase until 1904, when that of the United States reached somewhat higher. The shares in that year were about $40,000,000 for Great Britain and $45,000,000 for the United States. The inference is that but for the preferential tariff the increase of these imports from the United States would have been much larger, and from Great Britain much smaller if any increase at all.

The writer next selects certain manufactures in which Great Britain excels, comprising those of wool, cotton, linen, flax, leather and glass, with carpets, curtains, cordage, jams, confectionery, gunpowder and earthenware, and shows that Canadian imports of these from the Mother Country were about $12,000,000 in value in 1895 and sunk to $10,000,000 in 1897, but after the preference in duties was granted increased rapidly until they reached nearly $24,000,000 in 1904. The value of the same goods imported from the United States in 1895 was only $3,000,000, and though it has increased rather steadily it has not reached as much as $6,000,000 since. This is taken as evidence of a positive and substantial gain to British trade from the preference in duty rates, but it is in a line in which British manufactures have to go along with the tariff discrimination.

Another diagram is given exhibiting a class of articles in which the United States has made a large gain in exporting to Canada, and Great Britain has made little or no gain in spite of the preference. These include silks, gloves, perfumery, brass and copper goods, electrical apparatus and various instruments, and paints, colors, varnishes, etc. The value of those imported from Great Britain was about $2,300,000 in 1895 and $2,000,000 in 1897. It increased at first under the preferential duties, but has hardly got above $2,500,000 since. The value taken from the United States in 1895 was less than $1,500,000, but it increased to about $5,000,000 in 1904 in spite of the discrimination in duties. This is attributed to British manufactures in some of the lines affected, allowing foreigners to surpass them in the novelty of their designs, efficiency of construction, economy of manufacture and selling enterprise. On the whole, the Times inclines to the opinion that British trade with Canada has been saved by the tariff preference, and in some lines largely benefited at the expense mainly of the United States.

NO MACHINERY TAX.

WHEN it was proposed recently to levy a tax on machinery used for manufacturing purposes in the City of Toronto, representatives of the Canadian Manufacturers' Association waited upon the city council asking them to reconsider the matter. The answer given at the time led the manufacturers to believe that the tax would not be revoked and that they would have to pay some $26,000 into the city treasury for the machinery they were using to operate their respective plants. Other pressure was probably brought to bear on the city council and the shortsightedness of their policy made apparent to them. The Board of Control recently authorized the tax collectors to the effect that this was not to be collected this year. Had the city collected the tax it would probably have lost many times the amount by frightening intending manufacturers from coming to the city.

PROGRESSIVE JAPAN.

THE newly-discovered nation of Japan continues to forge ahead in a way that surprises even the most sanguine of her supporters. In manufacturing, the Japs are already in the very front rank, and so keen has Japanese competition become in their home market that British and German traders show signs of alarm. A few years ago the foreigner brought his goods to Japan and succeeded in cultivating a first-class demand for them. It was not long before it began to dawn upon the unsophisticated Jap that he was paying out money to a stranger for something that might as well be produced at home. Directly he set about copying articles of foreign manufacture with such imitative skill that even the connoisseur to-day finds it difficult to distinguish between the copy and the original.

Japan has not been slow to make the most of such opportunities as were afforded at the Osaka Exhibition, held recently in Japan, and it would not be surprising if her aggressiveness in trade and commerce were to extend to Canada within the next few years. Even now there is talk of certain Japanese interests going into the fish canning business for export trade.

Ernest L. Harris, commercial agent at Eibenstock, Germany, writes to the New York Journal of Commerce on the subject as follows:

"The products of Japan's industries are gradually forcing themselves into various markets of the world, where their competition is being felt by English and German traders. Japanese ingenuity and industry are beginning to exert an influence to such an extent that their exports are increasing, while at the

same time the markets in Japan are passing more and more into the hands of home manufacturers. This is causing a reduction of imports. It has long been thought that the Japanese were masters of the art of imitation, but it is now generally admitted the world over that they also possess powers of great initiative.

"A recent report of the British consul at Kobe records the fact that the import of cotton yarns shows a big decrease, due to the increased growth of the Japanese industry, which is gradually but surely ousting Lancashire coarse cottons from the Japanese market. Among woolen manufacturers the outlook for imported goods is not bright. The manufacture of flannels in Osaka has improved to such an extent that imports of this article have fallen off considerably. Japanese manufacturers today are producing the cheapest kind of cotton underwear, socks, toilet soap and lamps. The indigo and tobacco trades are also rapidly passing into Japanese hands."

BUFFALO PLUMBERS IN TORONTO.

A DELEGATION of about 125 plumbers and steamfitters from Buffalo were the guests of the Toronto Master Plumbers Association on Thursday, and a royal time was spent by all at Hanlan's Point. The fun commenced with the arrival of the Buffalos about 10 a.m., they being escorted to the oval at Hanlan's Point by the Highlanders' band, and badges distributed, the New Yorkers bringing a supply of white neckties with them, the date and name of the associations being printed on the ties above the Union Jack and Stars and Stripes.

Dinner was served promptly at noon, the spread being all that could be desired. A large tent was used as a dining hall, and any man who went hungry or thirsty, could cast no blame on the committee. Amongst the guests present, Hardware and Metal noticed Dr. Sheard, medical health officer; and Plumbing Inspectors Copping, Kirk and Meadows, of Toronto; Chief Clerk Snider, and Dean Wilson, chief inspector, of the Buffalo Board of Health. The officers of the Buffalo M.P.A. present, included Dan Lund, president; John Kaveney, vice-president; C. A. Smith, treasurer; W. E. Jackson, clerk; and H. J. Wood, secretary.

Sports of all kinds were the feature of the afternoon's enjoyment, a ball game, tug-of-war, quoits and races being all on the bill of fare. Toronto won the ball match by a close score, and her heavy weights were hard pullers in the tug-of-war, but Buffalo made even by winning practically all the field events. Supper was served at 4.15, and escorted by the band, the return trip via the Niagara boat, was commenced at 5.15 to the strains of "Auld Lang Syne," and the cheers of the Toronto men.

A CO-OPERATIVE SUPPLY HOUSE.

RUMORS are current that the relations between the Toronto Master Plumbers' Association and the jobbers who compose the Central Supply Association, are not as pleasant as they were and that the differences existing between the two bodies have gone so far that the establishment of a co-operative store by the master plumbers is almost certain. Through the co-operative institution the master plumbers plan, according to street talk, to supply themselves with all the goods they require, the trade banding together to support the store their money is invested in rather than the existing supply houses.

The cause of this move on the part of the master plumbers is understood to be the supposed selling of supplies to outsiders by the jobbing houses. The latter claim, however, that they cannot legally refuse to sell to plumbers who are not members of the association, and that they are doing all in their power to meet the wishes of the association men.

The supply men do not seem to fear the new move, contending that co-operative enterprises have never proved a success in this country. On the other hand, the master plumbers are sanguine that a plan can be worked out whereby the dividends to be paid will induce all members to support their own supply house, and in the case of a price-cutting war, that the members be allowed to buy where they can get the goods the cheapest, on condition that a percentage of the savings be paid into the treasury of the co-operative.

It is hoped that the matter will be arranged satisfactorily to both parties before extreme measures are found necessary.

PREPARING FOR CONVENTION.

ON Monday evening the executive of the Winnipeg branch of the National Plumbers' Association met to complete arrangements for the big convention on Tuesday, Wednesday and Thursday of next week. The first day will be spent in seeing the sights of the western metropolis, a drive to Silver Heights being one of the features of the day's entertainment. Refreshments will be served in the evening. The second day will be devoted to the serious business of the convention, the meetings to be held in Eureka Hall. Interesting papers will be read on important subjects. The closing day will be spent in pleasure. A steamboat ride on the Red River on Thursday night will be followed by a dinner at the Queen's Hotel, which popular hostelry will be the headquarters of the delegates during the convention. The entertainment of the visitors is in the hands of A. J. Hammond and Secretary Kirkman.

UNIFORM SIZED CATALOGUES

CATALOGUES of all sizes and shapes in unlimited number are supplied to merchants annually by jobbers and manufacturers. The material contained in the books and booklets is valuable and should be kept for reference by the up-to-date merchant. But the multiplicity in form and make up of the catalogues soon drives to desperation the merchant who endeavors to file them, and the books which should prove a blessing come near to proving a curse.

The matter of establishing a uniform size for catalogues has been discussed at numerous conventions and in the trade press for years, and at last there appears to be a possibility of something being accomplished. The Southern Hardware Jobbers' Association appointed a committee at its recent convention to push the matter vigorously and induce the manufacturers to get up their illustrated sheets suitable to be inserted in a uniform binder. The following questions are also being asked of each jobber belonging to the association:

First—Do you have your own catalogues printed? If so, send us a sheet of the catalogue itself, also of the loose leaf used in the loose leaf binder which you use in connection therewith.

Second—If you do not use your own printed catalogue, whose or what style of catalogue do you use for your office and your salesmen? Give size of sheet and size of printing space.

Third—What size sheet would you suggest we recommend shall be adopted by the jobbers and manufacturers? Please remember that it requires a little wider sheet for the loose leaf binders that for the regular printed catalogues.

It is time that similar action was taken in Canada, as the evil is almost as great here as in the States. Readers who have suggestions to offer will be given space in these columns to discuss a remedy for the nuisance.

With the Canadian Manufacturers' Association Excursion Party in England

Messrs. McNaught, Ballantyne and Firstbrook discussing weighty affairs.

Excursionists taking the electric cars at Sheffield.

Colonel Gartshore of London and Lloyd Harris of Brantford "on a toot" up the Thames.

Mr Dennis Murphy of Ottawa and Mr. Callahan of Hamilton, talking it over.

A group of Winnipegers at the Ascot races.

Mr. and Miss Sweet taking it easy. Mr. Sweet is Manager of the Sanford Clothing Co., Hamilton.

R. C. Wilkins of Montreal taking a sun bath with a friend.

Mr. and Mrs. David Waterous of Brantford playing Shuffleboard.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 58.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 4, 1905.

LOCAL wholesalers are putting their travelers back on the road, after their vacations, and orders are coming in more regularly. Although this is generally the slack season of the year, business continues surprisingly good, and all prices remain firm. The outlook for Fall trade is first-class and many orders are being booked for September delivery.

The stiffening of the tin market will affect all tin products, and advances in these lines may be looked for. Copper also has an upward tendency. A metal expert asserts that the visible supply of tin is over 18,000 tons short this year.

The effect of the tariff preference to British cement and firebrick is seen in the large quantity of English and Scotch firebrick, and English cement, which is being imported. Not much American cement is on the market, as the tariff brings the cost too high.

Blacksmiths are ordering supplies for their Fall trade, and sporting goods continue to be another feature of the market. Indications point to a very large business in the Fall, and all the jobbers are preparing for record-breaking orders.

Axes—The season for these goods is not yet at hand, but orders are already arriving for Fall shipment. We quote: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Conditions are the same as in the axe trade. An early revival in business is looked for. Our quotations are as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—Business is brisk at unchanged prices. Our quotations are as follows: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns— Retail merchants are heavily stocked, and orders received are mostly for Fall shipment. Prices are as follows: Cold blast, $4.50; No. 0 Safety, $3.50.

Barb Wire—Business is very quiet, as the season is ended. We quote: $2.75 for 100 lbs. f. o. b. Montreal; $2.37 1-2 f.o.b. Cleveland. Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—No activity is manifested, and sales are practically over for the season. Our quotations are as follows: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—The demand is normal and keeps prices firm. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—Orders for sorting-up are being received for immediate shipment. Little change is expected this season. Our quotations are as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—There is the usual demand for these goods and no fluctuations are reported. Prices are : Three-eighths and smaller, 60 to 10; seven-sixteenths and larger 55 to 5.

Wire Nails—There is a big and increasing demand for wire nails, to the detriment of the trade in cut nails. Large building operations in the west keep the trade brisk, and prices steady. We quote: $2.10 to $2.20 a keg f.o.b. Montreal.

Cut Nails—The demand is fair and prices are still at $2.20 a keg f.o.b. Montreal.

Horseshoes—Orders are coming in for the Fall trade, and a brisk demand is expected. The market is firm and prices remain as follows: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all sizes 0 to 4, $5.50; toe weight, all sizes 1 to 4. $6.75. Packing—Up to three sizes in a keg ten cents per hundred pounds. More than three sizes twenty-five cents.

Horse Nails—The market naturally follows that for horseshoes, and trade is picking up in anticipation of the Fall and Winter trade. Prices are the same as last reported.

Sporting Goods—Guns and ammunition are the principal items in this market, and orders are arriving in increasing numbers. The demand for fishing tackle has dropped off, owing to the lateness of the season. Our quotations are as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—A good demand is reported, and no change in prices has occurred.

Cordage— Orders are dropping off, though binder twine is still being shipped to many parts of the province. Prices are firm at same figures.

Cement and Firebrick—Local business is rather quiet, but a better trade is looked for in the near future. Prices are very firm, especially in Canadian cement, and better prices may soon be asked for Canadian Portland. We quote as follows: English cement, $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—A good demand comes from the lumber camps, and business is brisk at unchanged prices. We quote as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Green Wire Cloth—Only a few orders are now being received, and the season is practically closed.

Poultry Netting—Buying is now light, and only a few scattered orders are reported. We quote: Discounts for 2 inch nineteen gauge standard, and sixteen gauge extras, at 60 per cent.; finer meshes, 55 per cent.

Spring Hinges—Little interest is shown in this market, as retailers are all well stocked. Our quotations are as follows: No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—There is a fair demand and prices remain firm, as follows: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Cherry Seeders—Sales this season have been limited as yet. Prices range from $7.50 to $12.00.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, Aug. 4, 1905.

BUSINESS for this season is very satisfactory, and the travelers' holidays being practicallv over, an increased trade is looked for by the jobbers, although the splendid season experienced so far would indicate that a falling off is likely during the present month. Letter orders have been received in large numbers during the past few weeks, Summer fruit canning requirements being the chief item of trade just now. There are no changes of prices.

A few of the higher priced grades of lawn mowers are still being sold, but the demand for the cheaper lines has fallen off.

Many merchants are having special sales on seasonable goods not yet disposed of, the present being an opportune time to clean out the hammocks, ice cream freezers, etc., still in stock. A spell of warm weather provides a splendid opportunity to push these goods.

Sporting Goods—While the season is well advanced, there is still a lot of fishing being don and tackle is moving in fair quantity. Ammunition is also being sold in increasing amounts.

Washing Machines—Buying is as active as could be expected at this season.

Chain—The ordinary Summer trade is being done. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Dealers are well satisfied with their sales. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Good business is reported at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demands for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—Demand is reported good and country merchants are ordering in fair quantity.

Wire Nails—Active building is responsible for the record business being done. Nominal quotations are $2.25 f.o.b. Toronto.

Cut Nails—Trade continues satisfactory. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Trade is particularly good for this season. We quote as follows: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—A seasonable trade is noted. Prices are the same.

Screws—The mills are busy, but stocks are satisfactory. The strong demand keeps prices firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—No shortage in stocks is expected, although buying is quite active. Prices are firm.

Cordage—Sorting up orders are being received in fair quantity. We quote: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—No advance has taken place as expected. American cement is not a strong factor, none being heard of on the Toronto market. Our quotations are as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Business is brisk, demand being strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper—The general activity in building circles has resulted in a good business being done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool—Business in hides has been active during the week. A good demand is reported and firm prices, particularly in wool. Supplies on spot are light, in fact one dealer volunteered the information that he had not a hide in his warehouse that was not sold. We quote as follows:

Hides, No. 1 green steers, per lb		0 10
" " 2 " " "		0 09
" No. 1 green, per lb		0 09½
" " 2 " " "		0 08½
Country hides, flats, per lb	0 08½	0 08½
Calf skins, No. 1, selected		0 10
" No. 2		0 08
Lamb skins, each		0 55
Shorn pelts "		0 45
Rendered tallow, per lb	0 04	0 04½
Unwashed wool, new clip, per lb		0 16
Wool-washed fleece		0 26
Rejections		0 20
Pulled wools, super, per lb	0 21	0 23
" " extra "	0 22	0 24

For Manitoba, British Columbia and Maritime Province markets see following page.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, August 4, 1905.

SOME excitement has been created in the metal markets by the announcement that the Dutch government is about to curtail the sales of Banca tin in 1906, by making them some two thousand tons smaller than last year. Added to this there has been considerable manipulation of tin on the metal exchange, and a further advance is considered imminent.

Pig iron continues to occupy a prominent place in the eye of the buying public, and the recent boom in the United States is reflected in the large orders received by Canadian firms.

Another feature to be noted, is the advance in antimony. Some houses are cleared out of it, and, indeed, it is hard to obtain, even at the price quoted.

Ingot zinc is another article whose demand exceeds the supply, just now, owing to the difficulty of obtaining prompt shipments from the producing points, where floods have disorganized transportation.

Pig Iron—The brisk demand continues, and an advance is predicted. Prices are firm as follows:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.50 to 19.00	delivered	Montreal.
Clarence No. 1	17.50	"	"
" No. 3	17.00	"	"
No. Cleveland	17.50	"	"

Bar Iron—There is an increased call for bar iron, and a big Fall trade may be expected. We quote as follows: Merchant bar, $1.80; horse-shoe iron, $2.02 1-2; forged iron, $2.05; best refined iron, $2.20 net cash thirty days.

Tool Steel—The market is improving steadily, and the prices remain firm. We quote: Colonial and Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel No fluctuations are reported. We quote: Sleigh shoes $1.87 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.10; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—Good business is being done and prices are the same as last week. Our quotations are as follows: Cold-rolled shafting, 3-4 inch to 17-16, $3.85 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Canada Plates—An increased demand keeps the market firm, with no prospect of a change. Our prices are: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized, 52's, $3.90 to $4; 60's, $4.15 to $4.25.

Galvanized Iron—Shares the general activity in the metal markets. Quotations given are as follows: Queen's Head, 28 gauge, $4.15; 26 gauge $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's

Liverpool, England
Direct Importers of:
Metals of every description, Wire Rope, Portland Cements, Firebricks, Oils, Belting, Graphite Bags etc., etc.

"Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra

Black Sheets—No change has occurred in this line. We quote as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—The scarcity of antimony, and consequent increase in price, furnish one of the features of the week. We quote: 14 1-2c. to 15c.

Sheet Zinc—A scarcity is reported, and the prices remain firm. An advance is looked for. Our prices are: Cask lots, $7.25; small lots, $7.50.

Tin Plates—A brisk demand is manifest as an advance is feared. We quote: Cokes, $3.75; charcoal, $4.

Ingot Tin—An advance is noted largely owing to a rumor that Banca tin sales will be curtailed in the next season. Prices now ruling are: 34 1-2c. to 35c. per lb.

Ingot Copper—The firmness reported last week, continues. Prices are still 16c. to 16 1-4c.

Ingot Zinc—Great difficulty is being met in securing prompt deilvery of orders, and, at the present time, the visible supply is decidedly limited. Our prices are: 6 1-4c. to 6 1-2c.

Pig Lead—Is still very scarce, for no other apparent reason than the general good tone of the market. We quote the following prices:$3.75 to $4 per 100 lbs.

Boiler Tubes—No change has been experienced, and prices will remain at last week's figures. The demand is good. We quote prices as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12 1-4; 3 1-2 inch 16c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Scrap Metal—Prices are a little firmer, but no advance is looked for immediately, though it will certainly occur within the next couple of months. We quote prices as follows: Copper and wire, 12 3-4s.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to 9c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove-plate scrap, $9; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-2 to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 4, 1905.

A PERIOD of high prices is considered likely to follow the recent advances, as, while business is none too active owing to the high prices on ingot metals, buyers will probably have to come into the market even at the higher figures. There are no indications of a retrogressive movement, the tendency being still upward. Foreign markets are strong, and the local markets equally firm. Antimony has made its usual weekly jump, advancing another half-cent.

Pig Iron—All the mills are busy, and

the general activity causes a cotinuance of the firm quotations.

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Not much business is doing, but as the tendency of prices is upward, it is likely that buying will pick up while prices are still low. Our quotations are as follows: $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—Market is very strong and buying active. We quote: 35c. to 36c. per lb.

Tin Plates—Last week's conditions of activity continue.

Galvanized Sheets—An excellent demand is reported. Prices are steady.

Brass—Conditions are unchanged, business being fairly active. Discounts continue at 10 per cent.

Lead—The market is strong, with stocks light and demand very active. Prices are very firm. We quote: Pig lead, $4.00 per 100 lb., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—An improvement in trade is reported. Prices steady. We quote as follows:, 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—A large trade is doing and quotations are unchanged. Our quotations are as follows: Ingot copper, 15 3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—Another half-cent advance is recorded. The market is strong and prices still advancing. Our quotation is 15c.

Old Material—The advancing prices of metals is resulting in a more active condition. Prices remain the same, however, with no advances made in the dealer's buying prices, which are: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Another 10c. advance is reported on hard coal. We quote: Anthracite in cars at bridges: Grate, $5.15 per gross ton; egg, stove and nut, $5.40 per gross ton; pea, $3.80 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKET.

Advance proofs furnished HARDWARE AND METAL by The Iron Age, August 3, 1905.

THE iron trade generally continues in a very sound and satisfactory condition. The rush of buying in the southern field is over for the present, and in the leading distributing markets southern iron is slightly easier, since some of the smaller companies are willing to sell on the basis of $11.50 for No. 2 at Birmingham. The larger interests who sold heavily lately, are asking better prices. A lot of 4,000 tons of Gray Forge was sold for Pittsburg delivery at a rather low price.

Considerable further quantities of malleable bessemer pig have been marketed during the past week, and in the Chicago territory the condition of furnaces is such that the supply is rather restricted.

The demand for billets and sheet bars has continued good and prices are higher, with some good business pending in eastern Pennsylvania both for steel and for muck bars.

The rail mills are full of work. Some large orders, which have been pending, have not yet been placed. For some small lots for September delivery, some of the large systems have indicated a readiness to pay a moderate premium.

The condition of the structural trade is well illustrated by the fact that the United States Steel Corporation has started to build a mill for rolling structural shapes at the Clairton plant. This mill, which will have a monthly capacity of 10,000 tons of shapes, ranging from 4 to 8 inches, is to be completed in the extraordinary time of 13 weeks.

The plate trade is looking forward to a heavy additional tonnage for the large lot of steel cars for which the Pennsylvania lines west of Pittsburg are in the market.

Agricultural implement makers have entered into additional season contracts for steel bars.

The strong position of steel is having its reflex action upon sheets, in which concessions are not being made as freely as some time since.

The general demand for pipe shows a little improvement. The oil country requirements are fair and the buying of boiler tubes is good.

There are at hand the first indications of the approach of the buying of wire products for the coming season, but the movement has not yet become pronounced. It may do so at any time between now and the middle of August, when the season really opens.

The eastern scrap trade shows some excitement among dealers and prices are firm and advancing.

The Canadian Copper Co. will erect a customs smelter at Copper Cliff to treat the product of New Ontario silver and copper mines. The cost will be $75,000. A power plant is being erected at Turbine, a new town near High Falls, 25 miles from Copper Cliff.

LONDON METAL MARKETS.

From Metal Market Report, Aug 2, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 46s. 4 1-2d., and Scotch warrants at 49s. 4d., making prices, as compared with last week, 7 1-2d. lower for Middleboro, and unchanged for Scotch warrants.

Tin—Spot tin opened strong at £151 15s., futures at £150, and after sales of 200 tons of spot and 200 tons of futures closed steady at £151 10s. for spot, and £150 for futures, making price as compared with last week, 15s. higher on spot and 2s. 6d. higher on futures.

Copper—Spot copper opened strong at £69, futures £69 5s., and after sales of 200 tons of spot and 900 tons of futures, closed weak at £68 6s. 3d. for spot, and £68 10s. for futures, making price as compared with last week, 11s. 3d. higher on spot, and 10s. higher on futures.

Lead—The market closed at £14, making price as compared with last week, unchanged.

Spelter—The market closed at £24, making price as compared with last week, 5s. higher.

THE METAL TRADE.

The past month has been a remarkable one in metals, and more so for the reason that the revival in business and confident buying by consumers was started at a time of the year when nothing but Mid-summer dullness was to be expected; and also that the buying movement started on a comparatively high basis of prices, and so far as American markets are concerned, has had no aid from speculative sources. The following advances have been established for the month:

Pig tin, 2 1-2c. per pound.
Copper, 1-2c. per pound.
Spelter, 1-2c. per pound.
Lead, $2 per ton.
Cookson's antimony, 4c. per pound.
Hallett's antimony, 2 1-2c. per pound.

Consumers are not only experiencing an increase in their business, but appear to see excellent prospects ahead, and with it has come up the serious question whether the present and prospective requirements for metals are not in excess of present production.—Metal Market Report. Aug. 2.

MINES AND METALS.

The Lake Superior Consolidated Co. intend to erect a coke plant with a capacity sufficient to supply the 150,000 tons of coke now consumed annually. A great many orders of various kinds have been received, and the present daily output amounts to 500 tons of rails and 450 to 500 tons of pig iron. The total output of rails since the mill was started eight months ago amounts to 100,000 tons.

* * *

A discovery of Bessemer iron ore is reported from Loon Lake, east of Port Arthur.

* * *

A rich gold strike is reported on the Copper River about 50 miles from Hazelton, B.C.

The capitalization of the Britannia Copper Syndicate, Vancouver, B.C., is to be increased to $1,000,000.

* * *

McKenzie & Mann and other owners of iron mines near Atikokan, have transferred their properties to the new Port Arthur Mines Co., Limited, capitalized at $500,000. Sulphur ore to the amount of 50,000 tons is to be shipped annually to the United States.

* * *

The wonderful development during the past few weeks of the mining discoveries near Cobalt on the Temiskaming Railway is the talk of the country. Already over $2,000,000 worth of ore has been raised and shipped to foreign smelters, and it is now proposed to establish a smelter in Ontario at North Bay, Sudbury or Toronto, to refine the silver ore.

* * *

Ore averaging 63 to 67 per cent. of iron is being mined at Lepreaux, N.B., by the New Brunswick Iron Co.

* * *

The B. A. Pyrites Mine at Queensboro, Hastings County, Ont., is developing an immense body of iron pyrites and is shipping ore to Buffalo.

* * *

The No. 1 blast furnace of the Algoma Steel Co., Sault Ste. Marie, Ont., have established a new world's record for a charcoal blast furnace. The output on July 8, 1905, was 173 tons, on July 9 it was 172 tons. The average for the four days ending July 9 was 163 tons. The charcoal consumption per ton of pig iron was 1,741 pounds; the pressure of the blast 9¼ pounds; the amount of blast 10,172 cubic feet per minute. As yet the furnace has not been blown to its capacity on account of lack of charcoal, but judging from its behavior so far the management sees no reason why the furnace cannot make as much iron with charcoal as it could with coke as a fuel.

* * *

The Nova Scotia Steel and Coal Co. have put in operation their new open-hearth steel plant. The operation, conducted under the direction of the officials, was successful. The second and third furnaces have also turned out their first cast. For the present the battery will be limited to these three furnaces, of 40 tons each, and a 50-ton mixer. Two additional furnaces are in contemplation.

British Columbia Trade News

Vancouver, B.C., July 28, 1905.

CONSIDERABLE interest is being taken in this province in the reported application of the Canadian Manufacturers' Association, to the Railway Commission, to revise its ruling ordering the C.P.R. to equalize its rates on fir and cedar lumber. The ground taken is that the ruling made some months ago has been observed by the railway company in the rather unexpected manner of raising the rates on fir, rather than lowering them on cedar. Such a course is not precluded by anything in the wording of the ruling of the Commission. The C.P.R. Co. claims that to lower the rate on cedar, is impossible, while the Canadian Manufacturers' Association claims that the increase on fir will work a serious hardship to the industry in the province, seeing that the millmen are already handicapped by competition with the protected industry of the coast states. The fact that this whole matter of competition has been subject of controvery with the Dominion Government for a long time, will no doubt have great weight with the Railway Commission.

* * *

A contract for 200,000 cubic feet of cut stone for the navy yards at San Francisco is to be filled by the Northwest Construction Co., with stone cut from the famous quarries at Newcastle, near Nanaimo, long lying inoperative. The stone will be loaded on a sailing vessel, now en route to Newcastle. Other large contracts for stone in San Francisco, will be filled from this quarry, which years ago, supplied the stone used in the San Francisco branch of the U.S. mint. The quality is vastly superior to any other stone quarried on the coast.

* * *

Work has been begun on the excavation for a new reservoir in connection with Vancouver city waterworks. The new reservoir is to have a capacity of 15,000,000 gallons, the present one having a capacity of 10,000,000, which was made last year by doubling the former storage capacity . The new reservoir will not be built this year, only the excavation being done, and leaving the site a year to settle, when the concrete walls will be built. The excavation is to be 300 x 400 feet, 16 feet deep and 200 feet square in the bottom. It is estimated that 45,000 cubic yards of earth will have to be removed. The contract price for the excavation is $14,000. It cost $36,000 to build the 10,000,000 gallon reservoir complete. These reservoirs are located on the highest point in Stanley Park, the city's magnificent natural forest, and close to the main portion of the city. It has an elevation sufficient to give an average of 108 lbs. pressure, thus breaking the head from the source of water supply in the Capilano River, a mountain stream which is tapped at many hundred feet elevation in the mountains across the Inlet from the city. In addition to this increase in reserve supply, it is proposed to build another reservoir on the higher elevations at the south of the city, for a high level system for that portion of the city, the pressure not now being sufficient for fire protection.

* * *

The first fire boat operated in Vancouver harbor has been put into commission by the Pacific Coast Lumber Co., which owns a large mill facing on the harbor front. This company, with considerable enterprise, purchased the vessel from the city of New Westminster, where she once combined the duties of a fire boat and public ferry across the Fraser River, being put out of commission by the building of the big Fraser River bridge. The steamer has been entirely remodelled, and is now capable of throwing a strong force of water in six streams. The aldermen were invited to witness a test of the steamer's capacity recently, with a view to deciding on joining in the cost of maintaining her for general service on the waterfront, an arrangement which is likely to be entered into.

* * *

The Victoria Marine Railway Co., which has its ways and works at Esquimalt, is now engaged in preparations for extensive shipbuilding. A new steamer is to be built for the C.P.R. to add to the Princess fleet, and though similar in type to the Princess Beatrice, built a year ago for the C.P.R. by the B. C. Marine Railway Co., the new Princess will be 40 feet longer, and will cost $40,000 more. She will be a wooden vessel. The same company is to undertake the remodelling of the Princess May, the northern liner of the C.P.R.'s fleet, at an estimated cost of $150,000.

* * *

A hydrographic steamer for the Dominion Government, to cost $75,000 and to replace the British admiralty hydrographic steamer Egeria, is also to be built, as well as a quarantine tender, which is now under contract at $42,000.

* * *

A. F. Peters, of the Record Foundry Co., St. John, N.B., is negotiating in Victoria for the purchase of the old Albion iron works and foundry, the object being to start a stove works, similar to that now operated in the east. The company Mr. Peters represents, is also discussing the advisability of locating in Vancouver, where it will be necessary to build.

* * *

Coast smelter industry is looking up. Folowing the purchase of the Crofton smelter by Mr. Geo. H. Robinson, the mining man who is principal owner of the Britannia mine, comes the announcement that the Ladysmith smelter, under the management of Mr. Thos. Kiddie, has secured a contract for 20,000 tons of copper ore to be delivered from Alaska mines, ores which are peculiarly suited to fluxing with those from the Mt. Sicker mines on Vancouver Island. Mr. Kiddie secured this contract in face of strong opposition from the smelter at Tacoma, Wash., the oldest established concern of the kind on the coast. There is a smelter now built on Prince of Wales Island, opposite Ketchikan, Alaska, which is proposed to be operated smelting Ketchikan ores, but no suitable ores for fluxing have yet been secured.

* * *

One more coal field has been added to the many already located in British Columbia. The newest location is on Short's Creek, west side of Okanagan Lake, and at 2,800 feet elevation. It can be mined and transported very economically, owing to its situation above the lake. The seam uncovered

is 52 inches thick, and promises to be excellent quality of bituminous coal.

* * *

The silver-lead industry in the Kootenays promises to be very prosperous, in the opinion of Manager W. H. Aldridge, of the C.P.R.'s mining department. He views with satisfaction the increased tariff on lead products, and is certain it will be of direct benefit to the industry in Canada. He says that the lead streak at the Trail smelter, now blown in, has plenty of ore in sight. Also, that the lead produced finds ready market, not only in Canada, but in the Orient, both China and Japan being large purchasers. The Australian lead has been diverted to England, leaving the Orient to Canadian lead. The price of silver continues fairly strong, and in this, Manager Cronin, of the War Eagle and Centre Star mines at Rossland, observes that it usually keeps up to 60c., though once in a while it drops to 55c. Lead is ruled by London price, which at present is high and the market strong.

Nova Scotia Trade News

Halifax, N.S., Aug. 1.

A VERY noticeable falling off in trade was evident during the week. The dull season in the hardware business has now set in. There is a fair demand, however, for a few lines, such as builders' materials, and cotton lines and twines. Sales of haying tools are also falling off, as the season is now well advanced. The firm of W. B. Arthur & Co. have assigned, and it is said their liabilities are very heavy. Representatives met some of the creditors, and an effort was made to compromise at 45 cents on the dollar, but the negotiations fell through.

The Dominion Coal Co. on Saturday received the first portion of an order for 150 steel cars similar to those which they have been using for several years, in general construction, but with some alterations in the bottoms, which it is expected will make the new cars more easy to discharge than the old. The capacity of each car is about 100,000 lbs., or about 48 tons, so that the 150 cars will add about 7,000 tons to the car capacity of the company, an important element in securing prompt despatch to their steamers. It represents an outlay of over $150,000, but gives the same amount of tonnage at a less cost than wooden cars can be built.

Steady progress is being made at the Sydney Cement Co.'s works. The output is increasing and on Friday reached two hundred barrels. The cement has been tested both in the air and under water, and it has been found satisfactory. The damage by fire and water to the stock of George E. Smith & Co. has been appraised at $13,306.76. The insurance loss is divided among the following companies:

Acadia	$1,120 10
Halifax	1,120.10
Norwich Union	2,240.20
Liverpool, London & Globe	2 240.20
North British & Mercantile	2,240.20
Hartford, Connecticut	2,240 20
Phoenix	2 105 76

The firm is now selling off the damaged stock at reduced prices, and the store is crowded with purchasers from the opening to the close every day.

J. Stanley Miller, of the staff of William Robertson & Son, wholesale hardware dealers, has accepted a position with a large wholesale hardware house in Harrisburg, Pa., and will leave for his new field of labor this week.

PERSONAL MENTION.

The hardware business of MacPhail & Co., Vancouver, has been sold to L. E. P. McAdam, late of New Zealand. Mr. J. L. Johnson, an old-time hardware man in the Northwest, comes in as manager.

Pilkington & Co., British glassware manufacturers, are erecting a large warehouse in Winnipeg, where they intend to carry a stock of goods for their Western Canada trade.

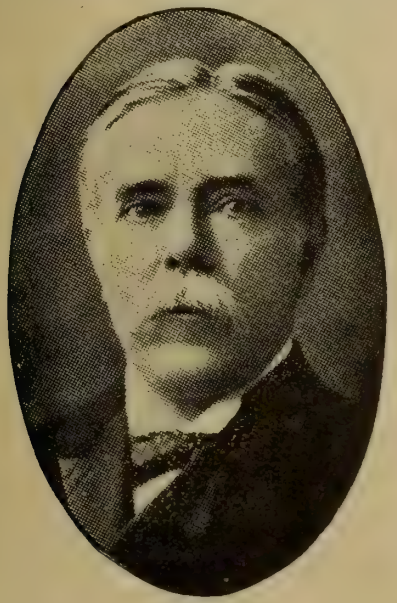
The warehouse of the Imperial Implement Co., Winnipeg, was partially wrecked as a result of the great weight of heavy farm machinery which it contained.

Mr. J. Hartford Chidester, of the Arrow Can Co., of New York City, manufacturers of the improved pressed steel ash cans, was a visitor at the Montreal office of Hardware and Metal last week. Mr. Chidester while in Montreal called on one of the local can manufacturers for the purpose of starting the manufacturing and sale of this can in Canada.

A HANDSOME RULER.

A very handsome ruler is being distributed among the hardware and heating trade by the Pease-Waldon Co., Limited, of Winnipeg. Among the multitude of advertising novelties of the kind, this ruler has a distinction all its own, and is worthy of a place on any business man's desk. Mention this paper and ask for one.

ONTARIO POWER COMMISSION.



THE Ontario Government made a definite move in the right direction when it decided to appoint the electric power commission to inquire into the question of the water-power possibilities of the Province of

Geo. Pattinson, M.P.P.

Ontario. The commission includes the Hon. Adam Beck, representing London, who has made a careful study of the subject; Mr. George Pattison, M.P.P. for South Waterloo, and one of our manufacturers, and Mr. P. W. Ellis, a successful manufacturer and public-spirited business man of Toronto. The investigation that is about to be carried on is of the most important nature and should have considerable effect on the progress of manufacture within the province.

It is hinted that the Government even propose to assume control of the existing franchises at Niagara and place all

P. W. Ellis.

water-powers under state control. This would be a decided innovation on the part of a government, but, if properly executed, would have the effect of supplying power to manufacturers at a much cheaper rate.

If you are catering to the building trade you know that builders who have once used "Hayes" Metallic Lathing cannot be induced to use any other. Its grip upon the mortar is so tenacious that it takes but half the quantity required by wood or cheap metal lathing, makes partitions much narrower and has a lightness, rigidity and freedom from "buckling" found in no other make of metal lathing. It's fireproof, ratproof and sanitary. No live builder should overlook the superiority of "Hayes" Metallic Lathing.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto, Canada 308

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, Etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Metallic" Eavetroughs and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug. 4, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

IN another part of this issue appears a full account of the proceedings at the annual meeting of the Western Retail Hardware and Stove Dealers' Association. Hardware dealers who were not present are recommended to read this report. Although the attendance was a little disappointing the membership list, the secretary's report, and the record of actual work done, show a satisfactory condition of affairs.

* *

A rolling mill for the manufacture of bar iron will be in operation in Winnipeg about the middle of the month. A full account of the Kirkwood Iron and Steel Rolling Mills will be found in another part of this issue.

* * *

On Monday, at noon, an important deal was completed whereby the Western Light Co. acquired the full selling rights in Manitoba and the two new provinces, for Siche gas, and all appliances connected therewith. The partners in this new company are H. A. Kidney, who was formerly connected with the Siche Gas Co., and E. C. Foley, and E. C. Colby, two gentlemen connected with the Canadian Iron Wool Co. H. A. Kidney will assume the active management of the firm, and offices are being opened at 328 Smith street.

* *

Henderson & Potts Co., Limited, already find their premises on Lombard street too small, and Manager Irwin informs Hardware and Metal that arrangements have been completed to double their warehouse capacity. Evidently there is a growing demand in the west for "English" paints.

* * *

Price changes are not numerous. Wire nails are reduced to $2.75 per keg, and in consequence, while cut nails are still nominally quoted at $3.00, none are selling. Turpentine has declined 4c. per gallon. After some cutting and competition the price of lanterns has been announced, and will be found below.

Screen Wire Cioth—Price is still quoted at $1.55 per 100 square feet. The season's trade is almost over.

Poultry Netting—Prices are as follows for the 2-inch mesh in No. 19 gauge:

24-inch	roll,	perroll	$1 20
30	"	"	1 50
36	"	"	1 80
48	"	"	2 40
60	"	"	3 00
72	"	"	3 60

Lanterns—There is a strong demand now for lanterns for Fall trade. After some competition and uncertainty, the wholesalers have announced their prices, which are as follows:

Cold blast lanterns	$4 75	per doz.
Coppered cold blast lanterns	6 75	"
Cold blast dash "	7 25	"
Lift Lanterns	4 25	"

Wire—Business still continues very brisk at steady prices. We quote as below:

Barbed wire, 100 lb.		$2 85
Plain galvanized	6 to 8	3 39
"	9 2 50	2 90
Plain galvanized	10	3 50
"	12	3 10
"	13	3 20
"	14	3 90
"	15	4 45
"	16	4 60

WALL COVERINGS

PAINT, OIL AND BRUSH TRADES

MASTER PAINTERS' CONVENTION.

THE Dominion Master Painters and Decorators held their annual convention in Hamilton last week, over 100 delegates being present. The chief features of the convention were the instructive papers read by members and the entertainments provided by manufacturers. The latter included a banquet at Hotel Brant, given by the Berry Bros. Co., of Walkerville, and a trip to Niagara Falls, provided by the Menzie Wall Paper Co., Toronto. The addresses included the following:

"Graining a Door," by W. E. Graham, Somerville, Mass.

"Master Painters' Associations and Why we Exist," by Mr. J. W. Morley, Winnipeg.

"The Advantages of the Open Shop to Employer and Employe," by Mr. A. N. Dubrule, Montreal.

"The Importance of Bookkeeping to a Master Painter," by Mr. Frank H. McCausland, Toronto.

"Measurements and Prices," by Mr. J. W. Knott, Toronto.

"Simple Methods of Testing Painters' Materials," by Robert Simpson, Sarnia.

"The Paper Hanger and His Difficulties," by Harry Holcombe, Hamilton.

"Apprenticeship and Technical Schools," (a continued paper), by W. T. Castle, Montreal.

"Fate of the Master Painter as Sub-Contractor," by member Montreal Association.

Lead tests were also conducted by James Matthews, and an interesting discussion arose on the question of removing old papers from walls. It was pointed out that several of the states had passed laws against putting new paper over old paper, for sanitary reasons. In Montreal, it was stated, the Board of Health had taken the matter up. Some of the members were in favor of sending a petition to the Legislatures of the various provinces to pass similar acts, but action was deferred till next year. It was suggested that the various associations call attention of their local Boards of Health to the matter.

The new officers are as follows: President, A. M. McKenzie, Hamilton; vice-president, T. W. Brooks, Windsor; secretary-treasurer, Stewart N. Hughes, Toronto; executive committee, H. N. Reynolds, Guelph; J. W. Morley, Winnipeg; Wm. Stamp, Hamilton; J. W. Johnston, St. John, N.B.; Robert Simpson, Sarnia. Trustee, George Metcalf, Hamilton. Windsor was chosen as the next place of meeting.

WHITE LEAD DUTY DEFERRED.

THE Government has made known to the paint manufacturers of Canada that their requests with regard to the increased tariff on imports of dry white lead have been granted, and that all white lead coming into Canada up to September 15, will come in at the old tariff of 5 per cent., provided it was ordered previous to July 6, the date on which the new tariff of 30 per cent. was established.

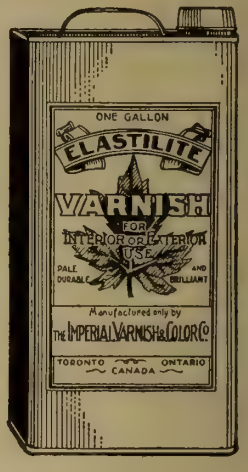
FOSTERING HOME INDUSTRIES.

An order-in-council was passed last week providing that dry white lead, orange mineral, and dry red lead made from lead produced from Canadian ores and pig lead from Canadian bullion, on entering Canada shall now pay duty on the full value of the article. A few years ago, in order to encourage lead mining in Canada, it was provided that pig lead made from Canadian ores and refined abroad, and dry white lead corroded from Canadian refined lead should be allowed entry at the actual cost of refining in the one case and the cost of corroding in the other. Recently a lead refinery has been established at Trail, B.C., and corroding works at Montreal, and it is in conformity with the policy of granting incidental protection to these new Canadian industries that the change has been made. The lead miner gets his encouragement through the present bounty.

NEW WHITE LEAD PLANT.

It is announced that, as a result of the new protective duty on white lead, the National Lead Co., of New York, a factory in Montreal. A good deal of Canadian capital has been secured for the scheme, which will be carried out by a separate company under control of the New York corporation.

The National Lead Co. is a large amalgamation of American lead corroding interests, and is generally known as the white lead trust, while the Carter White Lead Co., of Canada, already established in Montreal, is a dependency of the Carter Co., the largest of the independent companies in the United States.



Great secrecy is observed by the promoters of the new plant, but more definite news may be expected soon.

FRANCIS FROST CO. TO BUILD.

An agreement has been entered into between the Francis Frost Co., manufacturers of paints, oils and varnishes, and the Town of Toronto Junction, whereby the company secures a suitable site at the Junction and guarantees to build a cement or brick factory valued at $3,000 within one year. The growing business of the company made necessary the securing of larger premises with better shipping facilities, and these are provided at the new site.

There are lots of varnishes,

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 3, 1905.

THE past week has marked a continued activity in all departments. The demand for white lead, which was stagnant for a fortnight after the new tariff was adopted, has revived, and, as prices are still moderate, the orders are brisk.

Paris green is cleaned out, except for a few small lots in jobbers' hands, which have been distributed in needy centres. The stock has not been so low in many years.

In general paints, the demand is good, for the season, and large sales are reported. Red lead may be advanced during the week, as the market for pig continues very strong.

Turpentine is firm, at the prices quoted in our last minute reports of a week ago. It is stated that the crop is short this season, as compared with last season, owing to the difficulty of securing proper labor, in the southern pine belt.

Canadian Paris Green — Barrels, 17 1-4c.; arsenic kegs, 17c.; 50 and 100-lb. drums, 18c.; 25-lb. drums, 18 1-2c.; one pound packages, 19c.; half-pound packages, 21c.; one pound tins, 20c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Prices will be furnished on application. For the present, it is open.

Turpentine—Single barrels 88c. per gallon; two to four barrels, 87c. per gallon. For smaller quantities than barrels, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Raw, one to four barrels. 51c. to 54c.; five to nine barrels, 50c. to 52c. boiled, one to four barrels, 54c. to 56c. five to nine barrels, 53c. to 55c. f.o.b. Montreal. Net 30 days.

Ground White Lead — Best brands Government standards, $5.50 to $5.70; No. 1, $5.25 to $5.45; No. 2, $5 to $5.20; No. 3, $4.75 1-2 to $4.95; No. 4, $4.50 to $4.70, all f.o.b. Montreal.

Dry White Lead—Barrels, $5.25; 100-lb. packages, $5.50; six or ten-lb. tins. $6 50.

Dry White Zinc—Pure dry in casks. 7c.; in 100 lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb kegs, 6 1-2c.

White Zinc (ground in oil)—Pure. 25 lb. iron, 7 1-2 to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—Pure linseed oil $1.75 to $1.85. Bulk in barrels, $1.50; in 25-lb. irons. $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish — Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil — 8 to 9c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—A number of orders have been received from dealers contracting for a winter supply. As prices are at their lowest now, this is a wise move.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, August 4, 1905.

A DROP on both linseed oil and turpentine is reported this week, although stocks of neither article are at all heavy on the local market. Enough turpentine is being received, however, to supply the local demand and the drop is in response to a weakening on the southern market. The bulling of linseed in the States has not been as marked as predicted.

White lead is being sold in large quantities. When the price was low, buying was not at all active, but since the recent advance, orders have been placed in increasing quantities. This is a condition which could hardly have been expected. An advance on red lead is looked for shortly.

Mixed paints continue to be sold in large quantities, and business is keeping up so well that no decline is now looked for during the Summer months. Paris green sales have fallen off as expected.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—As usual at this

"Good Purchase"

season, there is little activity. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass—See current quotations at the end of this issue.

White Lead—Ex Toronto, pure white $5.50 to $5.75; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.37 1-2; No. 4, $4.10 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $4.25.

Red Lead—Genuine in casks of 560 lbs., $5.25; ditto, in kegs of 100 lbs., $5.50; No. 1, in casks of 500 lbs., $4.75 to $5; ditto in kegs of 100 lbs., $5.25.

White Zinc—Genuine V. M., in casks, $6.50 to $7; Lehigh, in casks, $6 to $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white. $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 54c.; boiled, 57c.; 5 to 9 barrels, raw, 53c.; boiled, 56c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrels, 87c.; 2 to 4 barrels, 86c.; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

WINDOW GLASS—MONTREAL.

Shipments of window glass, which should have arrived last May, have just come to hand this week, and the Montreal glass market is somewhat relieved. Conditions in Belgium have improved, and the output will now be larger than at any time since the strike began. Another favorable condition is the end of the Belgium Summer, during which it is almost impossible for the glass workers to continue operations. It will take a long time to catch up to orders already in, but the situation this week is on the whole encouraging. Prices are firm, but no change is anticipated. We quote: First break, 50 ft., $2; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 fe et,$4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

PERSONAL MENTION.

A site has been secured in Hamilton for a factory to manufacture tinware.

Mr. H. W. Aird, of the Canada Paint Co., is catching big fish at Prout's Neck.

The Winnipeg Paint & Glass Co. have opened their mill and warehouse in Fort Rouge.

The hardware business established by the late O. A. Rogers, at Middleton, N.S., is advertised for sale.

Mr. O. A. Cole, Toronto representative of the Philip Carey Roofing Mfg. Co., was in Montreal last week.

Mr. L. Wardell, representing the Peace Metal Weather Strip Co., has returned to Brantford to resume business.

A. H. Campbell, of A. C. Leslie & Co., Montreal, visited Toronto and Hamilton on business last week.

The George B. Meadows Wire, Iron & Brass Co. opened their new works on Wellington place, Toronto, this week.

Financial troubles of the new Imperial Hardware Co., Adelaide street, Toronto, are being aired in the courts.

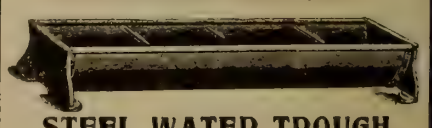
Mr. Max Morrell, Toronto, representative of Lewis Bros., Limited, Montreal,

Mr. T. H. Newman, of Caverhill, Learmont & Co., Montreal, is taking a two weeks' vacation at Rothesay, N.B. was in the latter city during the week.

The Capewell Horse Nail Co., of Hartford, Conn., is establishing a factory in Toronto to supply the Canadian market.

Jos. Douglas, of McFarland, Douglas & Co., galvanized iron workers, of Ottawa, spent a day in Montreal, last week.

The employes of the Canadian Iron & Foundry Co., Hamilton, held their annual picnic at Niagara Falls last Saturday.



Mr. Edward Dowsley, of A. Ramsay & Son, paint manufacturers, Montreal, is spending his vacation on the Coast of Maine.

Wayland, Williams & Dadson, Montreal, dealers in machinery, are fixing up their new warerooms at 321 St. James street.

The employees of the Canada Screw Co., Hamilton, held their fourth annual picnic at Niagara Falls last Saturday.

D. W. Clark, Canadian representative of B. K. Morton & Co., steel manufac-

HARDWARE MEN: Our

is a seller—something the average farmer has been waiting for.

We assist the trade by way of generous supply of literature, besides which we are advertising in the farm mediums.

We will make you an interesting proposition; so write us at once that you are open to consider the agency in your district. We appoint one representative only in all medium size towns.

It's worth having, believe us, so write for it to-day. STEEL TROUGH & MACHINE Co. TWEED, Ontario Limited

turers, is taking a business trip through Quebec Province.

Mr. Sam Brewer, of Thos. Robertson & Co., Montreal, returned from his vacation on Thursday. He reports a good time in spite of the rainy weather.

The hardware firm of Stanley & McLaggan, Chesley, Ont., has been dissolved by mutual consent. The business will be carried on by Donald McLaggan.

Mr. E. Foucar, who has been conducting a hardware store at Wetaskiwin, Assa., for several months, has decided to dispose of his business and return to Ontario.

Thomas H. Dunham, of the 20th Century Mfg. Co., New York, manufacturers of oil and gas lamps, called on the Toronto office of Hardware and Metal a few days ago.

Mr. A. E. Cholette, late salesmanager of the Canadian Rubber Co., Montreal, has accepted a position with the Gutta Percha Rubber Co., with headquarters in the same city.

Deep anxiety is felt over the serious illness of Mr. W. J. Crossen, the head of the Crossen Car Mfg. Co., Cobourg, and the hope is everywhere expressed that he may speedily restored to his accustomed health.

Mr. Norman Wylie, of Lewis Bros., Limited, Montreal, has returned from his trip to England with the Canadian manufacturers. He is already back on the road, telling his customers about King Edward's fine cigars.

Mr. J. E. Lecours, of Amiot, Lecours & Lariviere, wholesale plumbing supply dealers, of Montreal is traveling through Eastern Ontario and Western and Northern Quebec. Mr. Lecours will be absent from the city for ten days.

Mr. I. H. Clucas, traveling representative in the western states of the Russell-Erwin Hardware Co., New York, has been spending a week in Toronto visiting his father, Mr. Clucas, Toronto representative of the Canada Paint Co.

Mr. J. D. Currie, of the firm of Currie & Sampson, machinists, Pilot Mound, has returned from an extensive trip through the States and West Indies. The partnership has been dissolved and Mr. Currie will conduct the business himself.

Mr. William Francis, one of Montreal's best known hardwaremen, passed away last Saturday afternoon. The deceased was a member of the firm of W. & B. Francis, hardware merchants, 490 St. Paul street, and had reached his eighty-eighth year.

Mr. F. Reddaway, of F. Reddaway & Co., Manchester, Eng., who is making a tour of his colonial branches, is expected to visit the Montreal office of the firm about September 1. Mr. Reddaway has been detained in his trip by labor troubles at Moscow, where his company have a large factory.

A new factory will be opened in Hamilton for the manufacture of wire goods, stamped tin, tacks, and castings, by the Consolidated Hardware Co., which is headed by Mr. F. E. Robson, of Toronto, formerly of New York. A building has been secured on Park street. About 30 hands will be employed.

A. H. Patterson, Chatham, is going out of the hardware business, and will shortly enter the field as a manufacturer. During his four years in Chatham Mr. Patterson has made a large circle of friends by his honorable and scrupulous methods of doing business.

Negotiations are under way by which the Imperial Lock Co., of Toronto, and the Fader Co., of Orillia, will amalgamate and start operations at the Lock Works, at Orillia. The Fader Co. have a fine plant, which has been lying idle for some time owing to legal complications.

Mr. C. C. Ballantyne, vice-president of the Canadian Manufacturers' Association, will preside at the banquet on August 17, to be tendered Mr. W. K. George. Among the speakers will be Mr. J. S. Larke, Canadian commercial agent for Australia. The affair will be held at the National Club, Toronto.

Reid Bros., machinists, who started in business in Regina about a year ago, with a staff of two men, have now a pay list of over fifteen hands. They are working overtime on their contracts for caps for the city sewerage system, and turning out some very heavy castings. Their building has been recently doubled in size.

The main body of the members of the Canadian Manufacturers' Association who went to Britain arrived home last Saturday. President W. K. George was not with them, having waited over to come on the Virginian. Mr. R. J. Younge, the secretary, stayed at Quebec to arrange for the coming annual convention.

Mr. Walter Grose, of the Ontario Lantern & Lamp Co., Montreal, has just returned from England, where he went with the Canadian Manufacturers' Association. Mr. Grose reports that although his object was pleasure rather than business, still he comes back crammed with new ideas applicable to his business.

Daly & Morin, manufacturers of window shades, poles and trimmings, and wholesale dealers in brushes, etc., are enlarging their Montreal warehouse on St. Sulpice street by the addition of two flats. They are also building a new factory at Lachine, Que., 200 x 45 feet, three-storeys high, thus nearly doubling their present capacity.

NOTICE IMPORTANT

We shall close our works for the annual stocktaking and repairs, from the 19th to September 4th, and consequently advise such of our customers that may require Files and Rasps before the middle of September, to send in their specifications without delay, so that we may be enabled to ship promptly.

STOVES AND TINWARE

CARE OF STOVE PIPES.

THE ruinous rusting of stove pipes is a matter that is often forcibly brought to the attention of users of anthracite coal stoves. Pipes which have been in use for two or three years will sometimes become so eaten by rust that little metallic iron is left and the pipe will crush in the hand. This destruction is more rapid and complete than with the ordinary weather rusting of sheet iron.

The cause is generally attributed to the sulphur in the coal. There is not much doubt that the destruction of the mortar in chimney tops is due to the sulphur acids; but some experiments made by the writer a number of years ago resulted in showing that the sulphur has little to do with this injury to pipes. The true cause is the production of ammonia compounds during combustion. Both the chloride or sal-ammoniac and the sulphate are formed in the pipe and mix with the ashes and soot. It remains harmless during the dry, cold weather, but readily absorbs moisture by contact with damp air as warm weather comes on, when its action begins, and continues, so long as the cause remains. The effect of sal-ammoniac to induce rusting in iron is well known. It is also well known that bituminous coal gives off ammonia when distilled, the supply obtained at the gas works being considerable. We would hardly expect amthracite coal to produce an appreciable quantity, but when the writer mixed a little slacked lime with some dust taken from flues or pipes a strong smell of ammonia was developed, thus practically demonstrating that this salt is produced in quantity sufficient to cause injury.

Spring is the season when stove and furnace pipes will be put away for the Summer, and knowing the cause of this vexatious rusting we must look for the remedy.

The removal of the ammonia salt is a matter involving difficulties. If we start with a new pipe and brush out every particle of dust before the dampness has been absorbed the removal will be complete and no harm will ensue. This, however, is an exceptional case. In our climate we are often obliged to keep up our stoves and furnaces through the first warm, damp days of May, and sometimes early June. When rust has once commenced, and particularly in the case of neglected pipes, the crust of rust persistently holds the ammonia salt.

Two ways seem to effect its removal from the pipes: First, by immersing and thoroughly soaking the separated sections for several hours in water—running water, if possible—and, second, by roasting the pipes over a fire to a red heat. In my experiments both methods were tried with equally satisfactory results. The pipes, however, in the second method, must be heated to a dark red to completely drive off the ammonia compounds. A stove that could be heated throughout by a brisk wood fire just previous to removal for storage might be made immune, as well as its pipe, so far up as the intense heat had reached; and it has been found of advantage to soak and wash the removable parts of a kitchen stove before leaving the same unused for the Summer. In the instance tested this course prevented the rusting that previously had regularly taken place.

The accumulation of ammonia salts seems to be slow. Just a few fires in a stove do not appear to leave the destructive element in serious quantity. The rusting effect on cast iron furnace flues is to form a scale to a limited depth every Summer, which gradually thins the cast iron. Under the same conditions wrought iron pipes or flues would be penetrated unless of good thickness. After testing a number of samples at different times the ammonia compound was found to be in some cases the chloride alone. Sometimes it was a mixture with sulphate, and in one instance there was present only the sulphate.

The dust from furnace flues has considerable value as a fertilizer. The ammonia will show its effect very noticeably in the increased vigor of the growth of grass on parts of a lawn where the experiment is tried.

THE "ONE ORIFICE" KETTLE.

Griffiths & Browett, Limited, of Birmingham, England, are introducing the "One Orifice" kettle made under Webster's patents, which cover not only boiling vessels, but hot water cans, tea kettles, watering pots, etc. The "One Orifice" design obviates the use of a loose or hinged lid, and does away also with the spout. Instead a pressed-out top is employed in which is embodied an orifice which serves the purpose of a filling opening, and a pouring spout. The top is at an angle to the body of the kettle, this ensuring the free passage of any steam generated, and consequently obviating any chance of boiling over. In order to give the kettle a finish, a brass ring is placed round the orifice. The patents provide for a lid if such is deemed necessary, as, for example, in the case of teapots, and in this last connection the invention covers a clever little detachable strainer.

SACKVILLE FOUNDRIES IDLE.

About 50 iron molders employed in the Fawcett and Enterprise stove foundries, at Sackville, N.B., were locked out last week owing to the men demanding a 10 per cent. increase in wages and deciding to go on strike.

One or two stoves, with plenty of space around them and well displayed, are better than half a dozen crowded together so that nothing but the top and front can be seen.

The "Up-to-Date" and the "Ordinary"

As a practical salesman wouldn't you rather sell an "up-to-date" range rather than the "ordinary" kind?

Particularly when the "up-to-date" is bristling with points of merit and is arranged with all practical features of convenience and utility?

And when through its modernness and thoroughness of construction it will save fuel and time, thereby eliminating expense and worry?

And when the up-to-date will assuredly make you a friend?

And when this friend will therefore give you his other business, and you will have obtained actual advertising results without actual expense?

Better decide to be "up-to-date" and handle the

Walker Pilot Steel Range

Because it possesses all the above "up-to-date" advantages, and yet ***sells at a competing price and makes you about double the usual profits.***

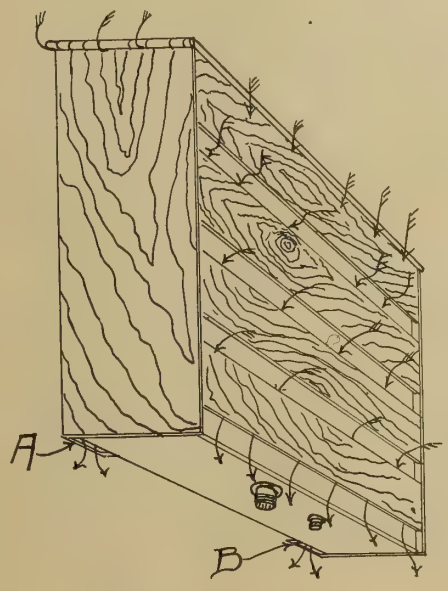
Article XI.

SWEATING IN LOW-DOWN CLOSET TANKS.

THERE is perhaps no other single article in the plumbing line which gives more trouble to the consumer, the plumber and the supply house than the low-down closet tank; not because, as a rule, it does not work well, or because it does not look well, but because it "sweats."

Why does a "low-down" tank "sweat" in the same room where a "high-up" tank will give no trouble? Why, indeed! for the reason, and the sole reason, that it is the product of unaccountable thoughtlessness, or inexcusable ignorance on the part of the men who have never asked themselves what difference exists between the "high-up" tank, which has proved so satisfactory, and the "low-down," which has been destroyed by "sweating" in, not dozens, or hundreds, but thousands.

Now, what causes sweating on plumbing fixtures and pipes? Let us answer the question indirectly by asking another, viz.: Why will dampness in the earth, in clothes, in wood; in short, in anything, dry up on a fine, warm day in Summer time, and remain damp on a cool, "muggy" day? The reason is that the warmer the air is the greater is its capacity for carrying moisture, and so it absorbs the dampness whenever and wherever it comes in contact with it, while cool air is "saturated" with a comparatively small amount of moisture and will not absorb any more from the damp places with which it comes in contact.



Now, if warm air can carry a large amount of moisture, and cool air a much smaller amount, it naturally follows that if the former has its full compliment of moisture and is suddenly chilled, that its moisture carrying power is reduced, and that the moisture in excess of its carrying power must be at once disposed of.

In the case of a cold water pipe on a Summer day we have a very good example of this condition. The air having a strong absorbtive power collects perhaps all the moisture it can carry, and in the course of its circulation comes in contact with the very cold pipe, where its moisture-carrying power is reduced, and what is more natural than that the excess of moisture should be deposited on the pipe surface which cooled the air, and in that way produce the condition known as "sweating."

This is exactly what causes the trouble in low-down tanks, which, in the first place, were made with reasonably tight woodwork, but not so tight, however, as to prevent a circulation of air between the wood and the copper lining, which caused sweating.

When this was discovered, a demand was made for a tank "with woodwork as open as possible," so that the sweating process would be overcome, and herein lies the reason for the criticism found in the opening paragraphs, because open woodwork in a closet tank is the cause of sweating.

In the illustration is shown a rear view of a low-down tank, as most of those in use to-day are constructed, and the arrows indicate how the air moving down between the tank and the wall passes in between the wood and the copper, leaving a deposit of moisture on

the latter, which spreads to the woodwork on every side of the tank, causing it to swell and split.

The spaces (indicated at "A" and "B") on each side of what are known as "recess" tanks are also channels through which a circulation of air takes place.

The obvious cure for the sweating low-tank evil then, is to make the woodwork solid; that is, without open joints of any kind, so that it will be impossible for a circulation of air to take place between the copper and the wood, and to make the wood a fair thickness, because this class of tank being invariably of "hard" wood, the grain of which being very close and compact, will, if thin, chill through and cause a certain amount of sweating on the outside surface.

If thin wood is used, however, a lining of good, soft felt paper whould be placed between it and the copper, and tacked in position, and if the woodwork is tight, perfect satisfaction will be the result.

In the case of an old tank which has been giving trouble through sweating, the plumber might take out the copper lining, then properly line the wood shell with soft felt paper and replace the copper; then paste heavy paper over the whole back and bottom, taking care to see that the edges, particularly, are stuck tightly to the wood. This will prevent the air coming in contact with the copper and consequently will stop the sweating.

OFFICE BUILDING VENTILATION.

THE heating of offices is well enough, but the ventilation is very largely neglected. These two are so closely related that they should be considered together. Present practice is to provide a radiator for heating controlled either by hand or a thermostat for each office unit, and to provide ventilation by opening the window, the foul air passing into the hall. The ideal arrangement would be to introduce a fixed amount of warmed, fresh, clean air to each office unit at any determined temperature automatically. In fact, there may be said to be no existing way of properly warming the bulk of the offices of an office building without the constant use of a little knowledge, intelligence and trouble. The foul air can be drawn off into a vent shaft placed at any convenient place. For banking and similar large rooms on lower stories the standand hot air heating system, with either exhaust or blast fans, works witu entire satisfaction and but little loss of valuable room, but the air inlets should always be 8 feet above the floor and at least 5 feet from the ceiling, and the outlets for foul air should be near the floor and large enough to have a very low velocity (less than 10 feet per second.) Then the occupants will not feel a draft. The inlet radiators must not be high up, because it is at times necessary to introduce the fresh air at a temperature lower than 100 degrees F. when it feels cold and produces the effect of a draft. If the fresh air forms a current flowing always in one direction, surfaces near it will get very dirty, and we are, therefore, compelled to keep away from the ceiling.—Geo. E. Hill, in Architectural Record.

PATENT FOR SALE.

An English firm, Nehemias Lee & Co., Limited, London, England, have a splendid patent for sale to some firm desirous of manufacturing to supply the Canadian demand for the "Noshado" burner. This invention casts no shadow downwards, and at the same time gives a full upward light. Besides reducing consumption, it gives increased candle power, and the mantle being secured at both top and bottom is very

hard to break. For full information regarding the advantages of the invention and the terms of sale, the firm should be written to, the name of this paper being referred to in the communication.

SHEET METAL RADIATION.

Paper read by H. W. Nowell, at the Chicago Convention of the American Society of Heating and Ventilating Engineers.

SHEET metal radiation has been in use for over fifty-four years, and in its varied forms is well known to be of more value as a heating agency than any other form or type of radiation. Undoubtedly one of the most efficient forms was the flat wall radiator invented in 1854, and one of the more recent date in corrugated form, made in France, both of which are still being manufactured on special order. The writer has knowledge of these that have been in actual use for over thirty-nine years, and the efficiency and apparent durability has not in any manner depreciated. The sheet metal radiator made in America, which, as before stated, was invented in 1854, was originally made of Swedish bloom iron and buttoned together on its flat surface with copper rivets. The originals of this first line are in use to-day, but when other makes of radiation came into the market the manufacturer of this radiator, in order to compete with the price, used a cheaper grade of metal, which was apparently Bessemer steel and riveted with iron rivets. The life of these was very short. They were not galvanized; were made entirely by hand, lap-jointed around the edge and soldered. The corrugated French radiator was made in a similar manner, riveted at the alternate points of corrugation. The writer has no record of the life of these, except a statement made by a manufacturer that he knew of their being in use for over thirty years. There was still another made up in tubular form, tube within tube, which was designed and used in Philadelphia twenty-eight years ago, and the writer knows of some of them still in use and claimed as giving better results than any other type of radiator.

The many different types of sheet metal radiation are conceded by engineers to be the most efficient, but questions have arisen regarding the durability, and pressures which they would stand, and among these lines the writer has had tests made of the metal used in the manufacture of a number of these, and chemists making the analyses and tests make unqualified statements that there should be no hesitation in guaranteeing this metal for any number of years.

Among the different types of sheet metal radiators, and the most modern, is one made along the lines of the cast radiator, in that it is of a vertical sectional type, and conceded to be more symmetrical and pleasing to the eye as to finish and design than other types, and have been demonstrated to stand 30 to 50 pounds pressure without leakage or bulging. Other features which appeal to the architect, engineer and steam fitter, are the lightness and space occupied by the sheet metal radiator, as the weight is about twenty-five per cent. of the cast and space occupied about one-half. As to efficiency in comparison with cast and wrought tubes, some exhaustive tests have been made, and I will take pleasure in mailing a copy of these tests to any member desiring them.

Some time in the year 1862 Professor Silliman, of Sheffield Scientific School, New Haven, made tests which were published, of the flat wall radiator. The efficiency was far beyond that of the wrought tube radiator made at that time.

The sheet metal radiator made at the present time is manufactured of No. 18 and No. 20 metal, and the joints are pressed under heavy pressure, no solder is used—the inside and outside of each section is completely covered with spelter, which prevents oxidation, after which the sections are assembled by male and female joints expanded together as a boiler tube is expanded into a boiler tube head, and the mechanical construction is such as to preclude any possibility of breakage by reasonable pressures, such as are used on present heating plants

This paper is not written for the purpose or intention to advertise any distinct line of radiators, but purposely to bring forward a line of discussion or argument relative to the merits of sheet metal radiation, and for the benefit of all to receive what enlightenment we can on this class of radiation.

CANADIAN AGENT WANTED.

Goodison & Co., gas engineers, 13 Maze Pond, London Bridge, London, S.E., England, are looking for a firm or agent who will represent them in Canada. They manufacture the "Wastenot" gas burner and Goodison's patent self-acting gas governors. By using these it is claimed that large savings are made in the amount of gas burned, and mantles are not so easily broken as when the governors are not in use. Hardware and Metal should be mentioned in writing the firm.

FIRST PRIZE FOR ABSENT-MINDEDNESS.

Francis Wilson, the comedian, believes the most absent-minded man lives in New Rochelle. Last Summer Mr. Wilson's front door bell got out of order and refused to ring, and meeting a friend, an electrician, he asked him to call and make the necessary repairs. Meeting the man several days afterwards, he reminded him that the matter had not been attended to and inquired when he could find it convenient to look after it. The electrician indignantly replied:

"Why, I called at your house the very day you asked me. I rang your front door bell, time and time again, and no one paid the slightest attention to me."

PLUMBING GOSSIP.

The American hotel, Brantford, is installing a new heating system.

Mr. Frank Morrison, of the James Morrison Brass Manufacturing Co., Toronto, is away on a holiday trip.

Robt. Ross, plumber, Sarnia, has disposed of his lime, cement and tile business, but will continue his plumbing business.

The Toronto Plumbers' and Steamfitters Union hold their annual excursion to St. Catharines by boat on Saturday, Aug. 19.

The James Robertson Co. have installed some handsome office fixtures in their Toronto offices. Work on the handsome new showrooms is nearly completed.

Mr. Robert Ross, president Dominion Master Plumbers' Association, was in town during the week. He has been on a farm for some time endeavoring to regain his health.

The Provincial Board of Health are meeting this week at Port Carling. An inspection of the septic tanks in the Muskoka District will be made by the members of the board.

Mahoney Bros., Guelph, have secured the contract for the plumbing work on the fine $4,500 residence to be erected in the Royal City by H. B. Callendar, of the Louden Machine Co.

L. Legrow has secured the contract for the plumbing for the extension of the Huron street school, Toronto, and W. F. Rutley for the heating and ventilating, the latter to cost $3,100.

The James Morrison Brass Manufacturing Co.'s employes had an enjoyable outing last Saturday, several hundred going to Niagara Falls, where games and sports were pulled off.

The Toronto Traders Bank have been allowed to vary the terms of the by-law so as to use wrought iron instead of cast iron soil pipes in the new building, on the advice of Dr. Sheard, who said experience showed wrought iron to be better in sky scrapers.

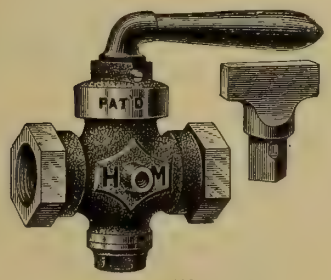
Amongst the plumbing and heating men from Ontario points who called upon the trade in Toronto this week were Messrs. Fred. Heximer, Niagara Falls Centre; A. Riddle and H. A. Bald, St. Catharines; John Bailes, Oshawa, and Charles Harper, Goderich.

Mr. E. A. Rogers, city traveler for the James Robertson Co., and one of the best-liked men in the trade in Toronto, leaves in a few days on a holiday trip to the Pacific Coast, visiting Banff, Vancouver, Victoria, Portland, Oregon, and other points before returning home.

The board of fire underwriters of St. John, and the town council of Sussex, have come to terms in regard to installing a gasoline engine in the new pumping station. There will be two pumps, and the station is to be of brick. All precautions against fire will be taken and the work will be proceeded with at once.

Canadian Fairbanks Co., Limited, are now getting settled in their magnificent new quarters at 26 and 28 Front street west, Toronto, having removed from their temporary offices at 100 King street west.

TRADE
PENBERTHY
MARK.



MADE IN  CANADA

AUTOMATIC INJECTOR

We want to impress upon every dealer the advantages of selling Penberthy Injectors. They have been before the public so long and have given such splendid satisfaction, that it simply means "wrapping it up" for your customer—and a good substantial profit on your investment. Nothing to charge to time lost talking something just as good.

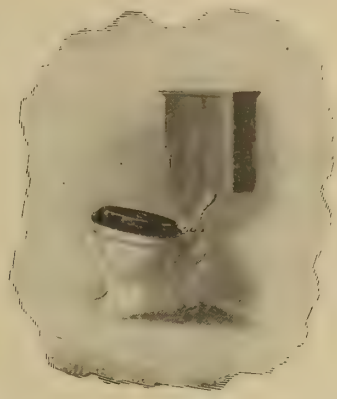
MUELLER GROUND KEY WORK

No. 49, STOP AND WASTE COCK.

c—139

A bulky looking stop cock does not necessarily mean a strong cock; this is more a matter of the character of the metal and where it is placed.

Mueller stop cocks not only have the bulk to indicate strength, but they are made of fine-grained red brass so distributed by design that they have as much strength as they appear to have. They are strong in fact as well as in appearance.



All Mueller Stop Cocks are given a 200-pound hydraulic pressure test, bear the Mueller trade mark and are *unconditionally guaranteed.*

We also make compression work and fuller work for plumbers' use. Catalogues on application.

H. MUELLER MFG. CO.

Decatur, Ill., U.S.A. *New York, N.Y., U.S.A.*

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 4, 1905.

QUEBEC plumbing trade continues strong in spite of the fact that recent strikes have produced a falling off in the local Montreal demand. Plumbers are not able to go ahead with their contracts, so long as the carpenters and bricklayers are out, and conditions locally will not improve until the labor troubles are settled. The surprisingly good sales in the rest of the province, however, more than compensate for this.

Contrary to expectations, no rise is yet reported in lead pipe, though the continued firmness of pig lead has induced the supply houses to prepare for a better price on pipe.

It is thought that present quotations on all other lines, will prevail for some time yet, as business continues brisk.

Range Boilers—A steady demand keeps the prices firm. We quote: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The expected jump in this line has not yet occurred, but the present quotations will undoubtedly advance in the near future. We quote: as follows: Discount 30 and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—This market has settled down, and no fluctuations have transpired during the week. We quote: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—Prices remain the same, though the market is scarcely so firm as last week. Some houses are quoting new discounts favoring the buyer. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent. 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—Nothing of note has occurred to change prices durthe week. We quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
August 3, 1905.

BRASS goods are now being sold on the new list, the general result being a 5 to 10 per cent. drop on some lines, others remaining stationary and a slight advance being made on a few scattered articles.

Lead pipe has not changed as yet, but the advancing prices on pig lead presage an early rise as soon as the metal market settles somewhat. Heavy buying of lead pipe is reported, particularly from the west.

General business is very satisfactory, every month this year having shown an increase over last year's trade, according to some houses. Certainly no complaints are being registered by any branch of the trade as to the volume of business being done.

Lead Pipe—The expected increase has not yet materialized, although buying is heavy. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—Large sales are reported at unchanged prices. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Call for goods is heavy and discounts continue the same. Our quotations are as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers—Good sales are being made, but no fluctuation in price has occurred. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Buying is active and prices remain firm. Our quotations are as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 3 1-2 inch, $23; 3 inch, $30.

Solder—Demand is steady and prices the same. We quote: Bar solder, half and half, guaranteed, 18c.; wiping solder at 16 1-2 to 17c., and refined 17c.

Enameled Ware—Local houses are having difficulty in supplying the strong demand for Canadian ware. Prices remain the same as last week. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50. special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet, 2 1-2 inch rim, 1st quality, $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.45; special, $2.

NEW STEEL PROCESS.

AN important invention for the manufacture of steel has just been commercially effected by the manager of a South Wales steel works. Under the new process it is estimated that the cost of producing steel of all grades of quality, will be reduced fully 20 per cent. Samples of the steel, both in sheets and bars, have been submitted to Birmingham experts, who have pronounced a most favorable opinion upon them, and arrangements are in contemplation for establishing works in South Staffordshire for the manufacture of the steel. One of the advantages of the new process is that it can be produced by any of the existing iron and steel-making plants with comparatively slight adaptation, and consequently it will be an enormous boon to the small manufacturers, who hitherto have had to purchase their raw material. To the decaying iron industries of South Staffordshire it is anticipated that it will mean renewed life and activity. The samples of steel which have been locally tested are considered to be particularly suitable for black sheet making, also for steel wire, and for all kinds of stamping goods. The steel is also adapted for railmaking and structural requirements of every description. It is claimed that the new steel can be produced and sold in the market at from $5 to $7 a ton below the cost of producing either Bessemer or Siemens-Martin.

UNIQUE CELEBRATION AT "SOO."

AN international celebration took place this week at the "Soo," the occasion being the fiftieth anniversary of the opening of the first Sault Canal. While the United States take to themselves the honor of building the first Sault Canal, the truth is Canada was many years in advance of them. As long ago as 1797 a canal on the Canadian side was constructed. The Northwest Co. was at that time competing with the Hudson's Bay Co. for the fur trade. As will be remembered, the Northwest Co. was a Canadian corporation, with headquarters at Montreal, while the Hudson's Bay Co. was English. The Hudson's Bay people operated via James Bay, drawing their supplies that way, and sending out their furs by the same route. The Northwest Co., on the other hand, traded through Canada. That corporation found it necessary to send its batteaux up the Georgian Bay, and across the head of Lake Huron, to Lake Superior. In order to reach the latter lake the Sault Rapids had to be overcome, and here the canal was built. The remains of this structure, which was abandoned when the company failed, are extant to this day, and it is understood that they perform the duty of a flume for the power company.

The Modern Canals.

The growth of business on the upper lakes led, in the early fifties, to an agitation for the construction of a ship canal on the Michigan side. The State of Michigan pressed the enterprise, but ultimately the United States Congress took it up, and built the now celebrated waterway as a national work. It is related that some of the greatest of United States leaders opposed the project as useless. Thus Henry Clay is credited with having spoken against it in Congress in sarcastic terms. He is alleged to have said that the idea of developing trade west of the St. Mary's River was a dream beyond the conception of the wildest fancy. But Clay had little knowledge of the possibilities of his own country or he would not have objected to an enterprise which has been a prime factor in the development of the great west.

The Sault business has been of such rapid growth that the canal as originally constructed was soon too small to accommodate it, and as a consequence new locks were opened. To-day the mammoth vessels can be floated from lake to lake, and it is estimated that there passes through the locks 35,000,000 tons of freight annually. The Sault Canals—that on the Canadian side and that on the United States—do two and one-third times more business than the Suez Canal, which is a waterway of some importance. Canada used the United States canal for some years under the Washington treaty of 1870, which requires each country to give the other equal rights in the canals. This was an advantage to Canada, but it was not nearly so great a benefit to Canada as the reciprocal use of the Canadian canals was to the United States.

Why Canada Built a Canal.

In 1888 Canada decided to have a waterway of her own, with a view to being completely independent of our neighbors. The circumstances which resulted in this decision were numerous, and were spread over a number of years. In the first place, Canada found that she could not send her troops through the United States canal, although on her own vessel. This was an awkward situation, especially during the rebellion. It was legal enough; but then it was not convenient. The obstruction to traffic could easily have been extended by the United States, so that the restricted use of the canal would not really be of any service to Canada. Again, there was no guarantee that the United States Government would continue the free navigation of the canal. There were movements making for discrimination. One of these was successful in President Cleveland's time. Because the tolls on wheat passing through the Welland to Montreal, via the St. Lawrence Canals, were no higher than those on wheat passing through the Welland, but going no farther than Ogdensburgh, Uncle Sam assumed that he was discriminated against, and placed a heavy toll on vessels using the Sault Canal.

Canada was not willing to be cut in two from the maritime standpoint, and to be at the mercy of a sometimes whimsical neighbor. Canada therefore struck for freedom and the cost was just $4,000,000. Canada's canal is a structure of superior character, and does her a great deal of credit. It is furnished with all the latest improvements, and is capable of accommodating vessels drawing 20 feet. The lock is 900 by 60, and this will take in anything afloat. The Canadian and United States canals are free to everybody. Thus, the two countries are in co-operation in the work of facilitating intercommunication. Now the canal provisions of the Washington treaty can be set aside if the people next door so desire. Canada is completely independent of them, and if they go the result will not at all affect her.

With the canals on both sides of the international line, and with traffic growing rapidly, the Sault has a great future to look forward to. It is the pivotal point in Canada, and is bound to grow in importance and in wealth. That the celebration of the event which has made the Sault what it is should be entered upon heartily is not to be wondered at. The opening of a system of through navigation was a contribution to the progress of the country of the highest value.

NEW TAX INJURES BUSINESS.

MONTREAL hotelmen who cater to the commercial trade report that their business is being seriously affected by the tax recently imposed by the Provincial Government on foreign commercial travelers who enter Quebec to sell goods.

Numbers of salesmen who come to the city with the intention of staying anywhere from two to ten days, leave immediately on hearing that they cannot sell goods without complying with the tax law. Most of them do not even bring their trunks up from the station, and very few have been willing to pay the $300 tax demanded of them.

As the news of this law becomes more generally known and understood among foreign firms who have done business in Quebec, their travelers will probably cease to visit Montreal altogether, and the effect upon the business of hotelmen who look to the commercial trade will be serious.

BUSINESS CHANGES.

Ontario.

J. Rodger & Co., painters, Hamilton, have dissolved partnership.

C. Wilson & Son, Limited, manufacturers of scales, Toronto, have suffered loss by fire.

The Oshawa Wire Fence Co., Limited, Oshawa, have advertised their business for sale by tender.

D. A. Baker, tinsmith and plumber, has assigned to A. Hagar, and a meeting of creditors was held August 3.

Quebec.

Z. Berard, contractor, Montreal, has gone out of business.

J. R. Durand, dealer in tins, Berthierville, has assigned.

Wm. Francis, of W. & B. Francis, hardware merchants, Montreal, is dead.

Nova Scotia.

W. B. Arthur & Co., wholesale and retail hardware merchants, Halifax, have assigned for the benefit of their creditors.

Manitoba and N.W.T.

Builders' Supply & Fuel Co., Winnipeg, have sold out to H. C. McQuarrie.

F. W. Ferguson, dealer in implements, Sedley, has been succeeded by Ferguson & White, J. H. White having gone into partnership with Mr. Ferguson.

British Columbia.

Shephard & Elliott, hardware dealers, Fernie, have been burned out.

R. F. Anderson & Co., hardware dealers, New Westminster, have been succeeded by Anderson & Lusby.

ST. MAURICE FORGES OF QUEBEC.

A FEW days ago a Canadian newspaper paragraph related to the St. Maurice Forges, in the Province of Quebec, with a statement by Dr. W. H. Drummond, that they are the oldest in North America, says the Canadian Manufacturer. A full historical account of these forges is contained in a paper contributed by F. C. Wurtele, librarian of the Quebec Literary and Historical Society, to the Royal Society of Canada, and published in their transactions of 1886. A copy of this paper is to be found in one of the bound volumes of Canadian pamphlets in the Ontario Parliamentary Library.

Mr. Wurtele's paper contains extracts from two descriptions of the forges, one by Professor Peter Kalm, who, in traveling through New France, stopped at Three Rivers in August, 1749, and described the forges in his travels in North America, published in London in 1771; the other in the Haldimand collection, being replies by Col. R. Burton to questions transmitted to General Murray by the Lords of the Board of Trade and Plantation, in London, when they required information on the resources of Canada. These replies were published in 1762, and were in answer to inquiries as to the number of forges in the province, what iron was made, and in what form and quality.

At the time of the conquest the forges fell into the hands of King George III., and were worked under the direction of the military authorities for five years, at a profit, but were then transferred to the civil government of Three Rivers. They were afterwards leased to a company for sixteen years, at the rate of

£25 a year. When Montgomery made his ill-fated expedition against Quebec he passed through Three Rivers, and Pellissier, the manager, who was not very loyal, ordered a quantity of shot and shell to be cast for Montgomery in his attack on Quebec. The works thereafter passed through various vicissitudes till 1883, when they were finally closed, the ore and wood in the neighborhood having become exhausted.

DEATH OF WILLIAM JESSOP.

CABLE advices announced the death of Wm. Jessop, Esq., on July 4, at his country estate, Thornsett Lodge Bradfield, Eng., after a long illness. Mr. Jessop was born October 1856, was educated at Repton, Germany, and at Cambridge. At the time of his death, and since 1887, he was chairman of William Jessop & Sons, Limited, steel manufacturers, of Sheffield, England, and was the head of the fourth generation of the Jessop family in control of the firm—the business having been established in 1774. He was also president of the Jessop Steel Co., of Washington, Pa., president of the Jessop Hospital for Women, an institution founded by his father, the late Thomas Jessop, to which he contributed over $200,000, and which was zealously and liberally supported by his son. He was also a trustee of the Sheffield Royal Infirmary, and a member of the Bradfield Game Association, controlling shooting rights over a large area of moors in the Bradfield district, and formerly director in the Sheffield & Rotherham Bank and Yorkshire Engine Co. He was a large land owner, and worked an estate of 4,000 acres at Huggat, in the northeast of England, and also an estate at Fosdick, and was keenly interested in agricultural pursuits, and an ardent sportsman. He was noted for his kindness and generocity to his tenants, and those in need, and made an excellent landlord, and was greatly esteemed by all. He visited Australia, Japan and America, in 1903.

CHANGE OF ADDRESS.

A. Shaw & Son, makers of glaziers' daimonds, who are represented in Canada by G. S. Pelton, Montreal, have been obliged to move into larger and more commodious quarters at 60 Spencer street, Clerkenwell, London, Eng. A. Shaw & Son have been before the Canadian trade for a considerable while, and their goods are well known amongst users of glaziers' materials.

The Ingersoll-Rand Co. will take possession of its new offices on the 14th floor of the Bowling Green building, 11 Broadway, New York, on August 1st. At that time the offices of the Ingersoll-Sergeant Drill Co., at 26 Cortland street, and the Rand Drill Co., at 128 Broadway, will be given up and the united forces moved to the new offices.

T. H. Burnham, of Carberry, Man., has accepted a position under Manager Stethem, of the Wells Hardware Co., Fort Francis.

THE MONEY SAVING
OXFORD BOILER

The Oxford Boiler ("B" Series) saves money by saving coal and utilizing heat that other boilers would waste.

The Oxford creates the maximum amount of heat from a given amount of coal.

Over the fire the walls of the firepot slope inward, forcing the heat in its upward rush to impinge thereon and yield itself up to the surrounding water jacket.

Bell-shaped flues in the large, lower water section take up still more heat in the same way. No heat is lost.

No leaky rubber joints—Steel Push Nipples make all connections metal to metal.

Our book will convince you of Oxford superiority for domestic heating purposes.

SPIRAL LAMP GUARD.

Sayer Electric Co., of Montreal, have secured the Canadian agency for the spiral lamp guard. The guard, as will be noticed by the accompanying illustration, protects the glass, and for this alone should be of great value in a room where obstacles are likely to come in contact with the glass. The guards are neatly packed when ready for shipping. Each guard, when packed, is flat and these may be placed away in stock in this shape, saving considerable space.

The following directions may be found both practical and valuable to users of this guard.

NEW BARN DOOR HANGER.

Barn door hangers have proved to be a valuable line for hardwaremen, and it is, therefore, of interest to note that a new invention is being put on the market by a Canadian concern, the Safety Door Hanger Co., of Hamilton, who manufacture the new "Wizard" Adjustable.

This hanger, besides having the flexible and stay-on features, has the distinct advantages of both lateral and vertical adjustments, and we are informed that it is the only hanger of its kind ever offered to the trade. It is a patented device of which Safety Door Hanger Co. are the originators and sole owners. The adjustments overcome the annoyance of doors binding on the building and dragging on the ground. By simply turning a set screw a door that binds may be released, while a reverse operation of the screw places the door as close to the building as desired, thus excluding rain, sleet, and snow. A door that drags on the ground may be raised by turning the vertical adjusting screw, and by the same means a door may be adjusted so as to be self-closing.

The numerous features of the hanger are unique, and the ease with which it overcomes all sliding-door troubles indicates that "Wizard" is not a misnomer. The Safety Door Hanger Co. are known to the trade as originators in their line of manufacture, and the new hanger is in keeping with their usual progressiveness.

CYCLE TRADE IN BRITISH ISLES.

UNITED STATES Consul Moe, of Dublin, Ireland, writes about a proposed combine of cycle manufacturers, and explains why there is no demand in Ireland for American bicycles. The consul says:

Considerable discussion has taken place with regard to the proposed combine of the various cycle manufacturers in the British Isles. The object practically appears to be to make no bicycle to be sold under 8 guineas ($40.87), and it would seem that several firms in the big English manufacturing centres have already come to such an agreement. It is a movement against the production of inferior, cheap machines, and carries with it the question of how the trade will be affected. Inquiries elicited statements from several agents and dealers in Dublin that such a combination would be received with favor by all the best houses. In this city the chief demand is for good wheels, the 10 and 12 guinea ($51.10 and $61.32) machines having the best sale.

There is no demand here for American makes of bicycles. This is due to the generous guaranty which English makers give with their machines, which are very well made, and the apparent unwillingness of American manufacturers to supply their wheels with metal rims instead of the wooden variety. The great amount of dampness in Ireland at all seasons of the year makes wooden-rimmed wheels practically useless. The demand for bicycles has increased enormously, and it is no exaggeration to state that cycling here is as popular this year as it was in the United States in 1896 and 1897. There is a splendid demand for motor cycles, most of which come from Coventry at present and give entire satisfaction.

IMPORTANT DISCOVERY.

An Hungarian chemist has described in a paper his discovery of the liquid chemical compound which renders certain kinds of matter, including metals, proof against the effects of time. It imparts to metals qualities which defy oxygen, and is also a germicide of hitherto unequaled power. The compound is a yellow liquid, which the professor has termed Zorene. In experiment this solution is said to have accomplished results hitherto thought impossible. A piece of ordinary and easily breakable slag, after immersion in Zorene, defied the full blow of the hammer. It was then immersed in water for a long time. When taken out and weighed with delicate scales, the presence of not a single particle of moisture could be detected. An ordinary table knife which had lain open for five months did not show the slightest stain.

WAXENE IN GREAT DEMAND.

I. H. Wiley & Co., Sudbury street, Boston, manufacturers of "Waxene," and wholesale paint dealers, have been compelled to move into larger premises across the street from their former stand. Their sales of "Waxene" are extending in Canada as well as throughout the United States.

PALMETTO PACKING

We have been appointed Canadian Sales Agents for the above packing which is so well and favorably known, and respectfully solicit orders for same.

BECAUSE

It will not wear or score rods.
Has great durability.
It is self-lubricating.
Does not get hard in service.
Does not deteriorate with age.

The Reasons are

That only the best materials are used.
It is entirely free from grit and acid.
Lubricant is forced into each strand before braiding.
It is braided several times and it holds lubricant until worn out.

EVERY HARDWARE AND SUPPLY DEALER SHOULD HANDLE IT.

SAMPLES AND CIRCULARS FURNISHED ON REQUEST.

Clauss Brand

Fully Warranted

Paper Hangers' Shears

Hand forged from finest steel and welded on our composition metal, hardened in water and tempered by natural gas. This shear is made purposely for paper hangers' use, and is more durable than other of its kind on the market. We call special attention to this Shear. Japan handles and finely finished blades. Ask for discounts.

Clauss Shear Co., 169 Spadina Avenue, Toronto

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

MacLEAN PUBLISHING CO., Limited

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

FINANCE

THE affairs of the Equitable Life Insurance Co. have stirred up public interest in more ways than one. In the first place, the manipulation of funds by the officers for the financing of questionable private schemes has come as a shock to the large number of policy-holders. Where the companies founded and owned banks, and where colossal organizations for promoting companies were started, the possibility of an incentive to private use of trust funds was great. The investment of the funds of a life insurance company should be in the safest place possible. Policy-holders, while they figure on getting some accrued profits on their payments, nevertheless go in primarily and almost exclusively, not for an investment, but for a protection in case of death. It is of small importance to them that a little higher per cent. of profit can be made if a greater risk is taken. The all-important thing with them is to be assured that on their death a certain minimum sum will be paid to their beneficiaries. That assurance is what the insurance company is bound to give. Yet, when the officers of a company like the Equitable indulge in wholesale stock jobbing, exploiting in such enterprises as the whisky trust, and so on, what certainty can any man have that the amount of his policy will be forthcoming? The exposure of the methods of high finance which have been going on for some months will do much to clear the atmosphere and compel the companies to travel the road of honesty and fair dealing with their members.

* * *

The second point which has come up for consideration is the whole question of mutualization. A mutual company is one in which the members share in the profits. Hitherto these profits have been allotted at the end of twenty years or when the policy fell due. "Why," it is asked, "are not these profits divided each year as they would be in any other money-making company?" That such a system is feasible is shown by the new policy now being issued by the Equitable, by which the profits are divided every five years. If all policy-holders are members of the company, as is claimed when the policy is being written, then why should they not get the benefit of the investments? The final distribution is undoubtedly small compared with the total amount which has been made through the investments and speculations with the company funds. Such questions as these will press for settlement in the near future.

The Fisk
Detachable Motor Tire

Some of the things that experts say about it:

"Fisk Tires are giving us such excellent satisfaction and are making friends so fast among those who are using them that it will soon be impossible to sell anything else, regardless of what efforts the salesmen may make on other tires."

"I recommend them to anyone desiring a tire that is very easy riding, that will stand a great amount of wear, that does not blow off or roll off the rim and, above all, that can be detached and replaced by any one not a tire expert."

"We congratulate you on having in this tire a construction that seems to solve the tire question."

Davidson's Cereal Steam Cooker and Vegetable Boiler

Stew Pan with Enamel Cover

Wire Egg and Vegetable Boiler

White Cereal Dish

Using the well known application of Steam in a novel and convenient manner.

The inside Cereal Dish being suspended in the Stew Pan by means of a useful wire basket; is always surrounded by steam, ensuring the perfect and hygienic cooking of the contents.

The Wire Basket has many additional advantages, as it can be used for either boiling Eggs or Vegetables, and having wire handles at the sides it is very easy to handle.

The inside Cereal Dish is readily removed, and can be used on the dining table in a plated receptacle, or without, as this dish is always supplied in White Enamel only.

SIZES AND DESCRIPTION

No. 13—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; One 3 quart Cereal Dish.
No. 15—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; One 5 quart Cereal Dish.
No. 35—One No. 5 Stew Pan; One Wire Vegetable or Egg Boiler; Two Cereal Dishes, one each 3 and 5 qt.

Made in "Premier" and "Colonial" Enamelled Steel Ware.

By permission of His Most Gracious Majesty King Edward VII, the band of the Irish Guards, His Majesty's favorite household band and the finest military musical organization in the Empire, will give two concerts each and every day.

Art and Treasures

In an especially built, extensive, fire-proof art gallery will be presented the grandest collection of art and art treasures ever got together on this continent, including loans from the King, the Corporation of the City of London, the great English Universities, the Republic of France, South Kensington Museum, Lord Strathcona, the Lieut.-Governor of Ontario and other distinguished bodies and gentlemen.

Coronation Picture

By special command of His Majesty the King, Abbey's noted and historic painting will be on exhibition during the entire fair.

Fall of Port Arthur

The greatest pyro military display ever produced before the Canadian people. Scenes in this most recent of the world's most appaling event will be vividly portrayed with real Japanese and Russian soldiery taking part. The fireworks display will be on a brilliant scale, introducing new features of an Oriental character.

Other Things to See

The Process Building, Samples of all the Industries and Resources of the Country, Thousands of Horses, Cattle, Sheep, Swine, Poultry and Dogs, All Canadian Cereals and Minerals, good Trotting and Pacing, a superb Variety Show, the World's latest Inventions.

Special Excursions

Special cheap railway and steamboat excursions have been arranged. Enquire of your nearest station or ticket agent for rates.

W. K. McNAUGHT, President.

CANADIAN MANUFACTURERS IN ENGLAND

By W. L. E.

THE TRIP TO PARIS.

BOTH of what may be termed our first and last official functions, were surprises. The first was the reception given to us by the King and Queen. The last was the invitation from the Paris Chamber of Commerce, through the French ambassador in London, to

Excursionists on Steamer at Liverpool.
In the foreground is Mr. Burns, of Burns & McClurg, Toronto. The gentleman with the silk hat is Mr. Hutchins, of the Great West Saddlery Co., Winnipeg.

visit "Gay Paree." The invitation was of the heartiest kind, and it was intimated the more that came the better would our host be satisfied.

The invitation came when we were in the midst of our provincial tour, and when hospitality was being heaped upon us with such rapidity that we were threatened with annihilation. But it was accepted with pleasure, and in fact, enthusiasm. The three weeks' of British hospitality had made us veteran campaigners in the field of pleasure. And so 160 of us shouldered our baggage (pardon, Monsieur, luggage,) and started for the French capital.

As in our provincial tour, so in this journey to Paris, representatives of the London Chamber of Commerce accompanied us to the French capital to see that no harm befell us. Our guardian angels in this particular instance were Messrs. R. S. and L. Fraser, (who had scarcely lost sight of us since we reached the British capital) and Col. Sir Roper Parkington.

Two hours after leaving London we were steaming out of Dover harbor, and 70 minutes later we were entering Calais. The mayor of Calais, other officials of the town, and Mr. Poindron, the Canadian commercial agent at Paris, were on hand to welcome us. They were full of smiles, and courtesies. In the restaurant at the landing stage, luncheon was awaiting us, and as we were awaiting the luncheon, the latter soon became a part of ourselves.

Of course, there was speechmaking. The words that were spoken were not understood by all present, but no one misunderstood the sentiments expressed.

The mayor of Calais proposed the health of King Edward, and Mr. W. K George, in responding, said, amid much applause, that to the harmonious relationship existing between the English and French speaking people of Canada was largely due the progress of the Dominion of Canada. A remark that also came in for warm approval, was that made by the president of the Calais Chamber of Commerce, when he said that the ties of relationship between Canada and France were of a peculiar and special kind. Another remark to the effect that a special order had been issued by the customs authorities, exempting our baggage from examination, was naturally cordially welcomed.

At Paris, the representatives of the

Excursionists at the Firth Bridge.
Young man in the rear of the brake is Mr. Northway, of Northway & Son, Toronto.

Chamber of Commerce and Senator Rolland of Montreal, were on hand to receive us. About eight hours after we left the British capital we were located in the French capital.

On the first day of our visit to Paris we were allowed to have our own sweet way. We had neither receptions nor dinners, for all of which we were truly thankful. But we did not waste the day. We utilized our freedom by getting acquainted with the city, and studying the customs and habits of the people, incidentally, of course, admiring the dress and beauty of the Parisian belles.

But the second day of our stay in Paris was well filled in. In the morning there were drives; after luncheon there were visits to the Chamber of Deputies and the Senate, both of which houses were in session. Then came the reception tendered by the Paris Chamber of Commerce, while the day was closed with a banquet.

Nothing could have been more cordial than the reception, and no one could have done more for our entertainment. The Weather Clerk was the only one against whom we have any complaint to make. He simply roasted us. But probably it was more the mistake of the head than of the heart. He might possibly have been laboring under the erroneous idea that we needed to be thawed out after coming from Canada. At any rate, whatever may have been his preconceived notions, he certainly melted us. But we enjoyed the function none the less. We were welcomed in English as well as in French, and the replies from the representatives of our party were also couched in both languages. President George spoke in English, and was profuse with apologies because he was unable to speak in French. The duty of replying in French devolved upon Senator Rolland, and well did he acquit himself.

* * *

The French want to do more business with us. And it is not all born of the monetary desire either. Canada is lost to France, but while the political ties have been severed, those of sentiment are still strong. This fact was much in evidence at every function, and on all occasions. It is to be devoutly hoped that this sentiment will always be strong. It is a good thing for business as well as for peace.

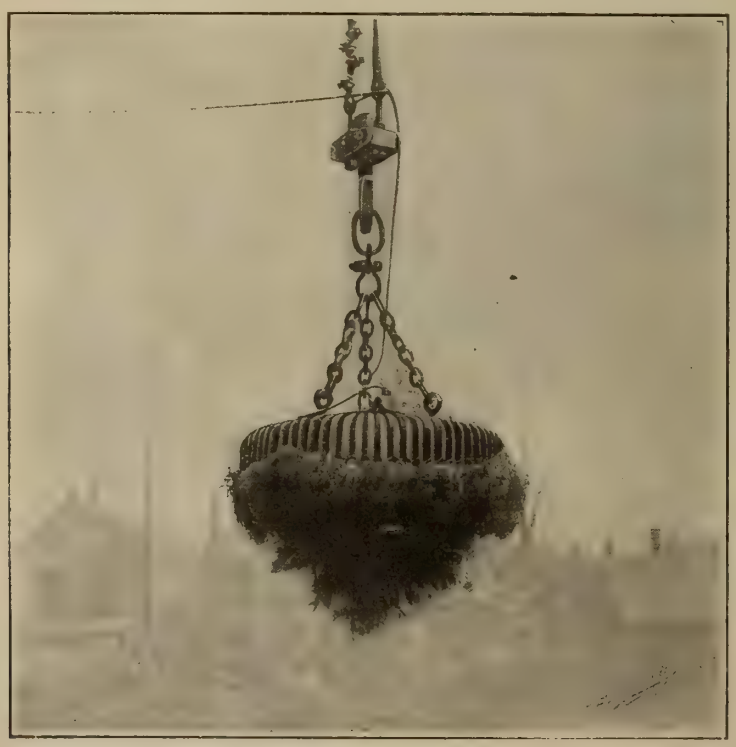
* * *

On the great national fete day, the day in commemoration of the fall of the Bastile, we were honored with seats on the grand stand at Longchamps, from

Some of the female employes of Lever Bros., Port Sunlight.

which we had a magnificent view of the review of the garrison of Paris, some forty thousand men. And here our joy was made complete by the hearty cheers that were accorded the British naval officers who had come up from Brest to, like ourselves, see the review. The

British naval officers wore gratified smiles indeed as they drove away.



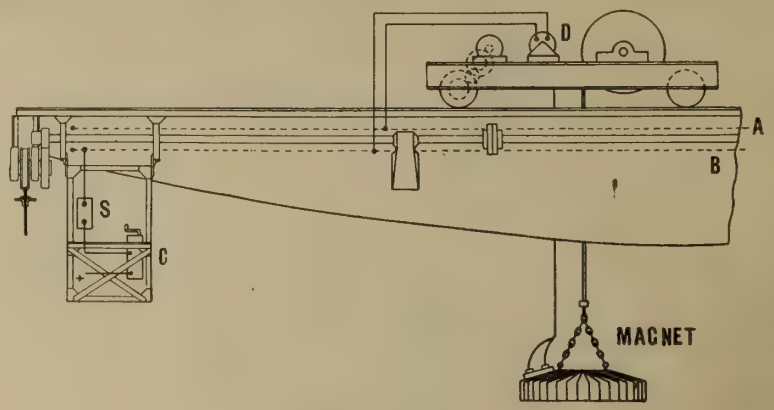
* * *

On the evenings of the fete days we had an exceedingly good opportunity of seeing the light-hearted people of Paris abandon themselves to pleasure. At 7 p.m. street car and 'bus traffic was suspended, and then the fun began. The streets were literally filled with people. Brass and string bands, and in lieu of bands, hand organs, were stationed at short intervals all over the city. Every street and public square became a dancing platform until far after the "rosey hue of morn" had appeared, and the necessities of business demanded that the drays and other vehicles should again be allowed to travel their accustomed route. Tell it not in Gath, some of our Canadian fellow travelers vied with policemen, soldiers and citizens generally in tripping the light fantastic over street car rails and cobble stones. And they appeared to enjoy it just as much as the natives themselves.

* * *

Mr. Anatole Poindron, the Canadian commercial agent in Paris, did much to make our stay in the French capital pleasant. He came down to Calais to help us, and in Paris he was here, there and everywhere, anxious to be of service to us; and he was of service. From what I could gather he is a good man for the position he holds. He is certainly anxious for the extension of trade between Canada and France, and was ready at all times to place himself at the disposal of those in our party who could find time to visit those in Paris who might be interested in trade between the two countries.

While in Paris I was impressed with the opportuneness of the present for the development of trade between Canada and the French republic. As I have already pointed out the sentiment of business men in France, towards Canada is most favorable, and they are ready to buy from us as well as to sell to us. It is up to our business men to take advantage of this, and I am sure Mr. Poindron, the Canadian commercial agent, 101 Rue Reaumur, will be glad to lend all the assistance in his power to those who may seek it .



Magnet Handling Machine Boring.

ELECTRO LIFTING MAGNETS.

WHERE it is necessary to handle steel or iron in quantities by means of a crane, a magnet will effect economy in time and labor sufficient to pay for itself in from one to six months. This has been borne out by experience in steel mills, jobbing houses, safe works and other metal industries. Different illustrations are shown herewith of electro magnets, together with diagram of connections, embracing a line manufactured by the Electric Controller & Supply Co., Cleveland, Ohio.

In all cases an electro magnet is used, suspended from the hook of the crane; direct current at any of the common voltages being employed to energize the magnet. A flexible twin conductor cable is used to convey the current to the magnet and a small switch operated by the crane man is usually the only additional apparatus necessary. The amount of current used is small, being from one to twelve amperes according to the service for which the magnet is designed.

Method of Wiring.

In operation, the magnet is lowered upon the material to be lifted, and the switch closed, thus causing the magnet to attract and hold the material, which may then be hoisted by the crane and transported to the desired point. By simply opening the switch the material is instantly released.

Comparing this method of operation with the common methods of connecting the load to the hook of the crane with chains, hooks or clamps, the saving in both labor and time is apparent, as, in general, the attachment of the magnet to the load, as well as the release of the load, may be accomplished by the crane operator without assistance, thus saving the labor of one or more men for prying up the material, attaching hooks and chains at the point of loading and additional men at the point of delivery for unhooking the load from the crane.

Magnets can be so quickly attached to and detached from a load that by their use the work which may be done by a given crane is greatly increased, in some cases more than doubled. It frequently occurs that the attachment of lifting magnets to existing cranes so increases their capacity for handling material that the purchase of additional cranes for

WIRE NAILS
TACKS
WIRE

Prompt Shipment

The ONTARIO TACK CO.
Limited.
HAMILTON, ONT.

handling an increased output is rendered unnecessary.

Again, lifting magnets require much less headroom than hooks or chains for lifting material of considerable width, such as plates. Therefore, by the use of

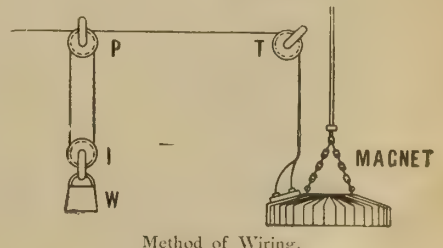
Unloading Pig Iron.

magnets, material can be conveniently piled to a greater height in the storage space under a given crane than is possible when chains are used, thus increasing the capacity of a given storage space without altering the crane runway

Magnet Lifting 11,000 lbs.

or increasing the size of the building.

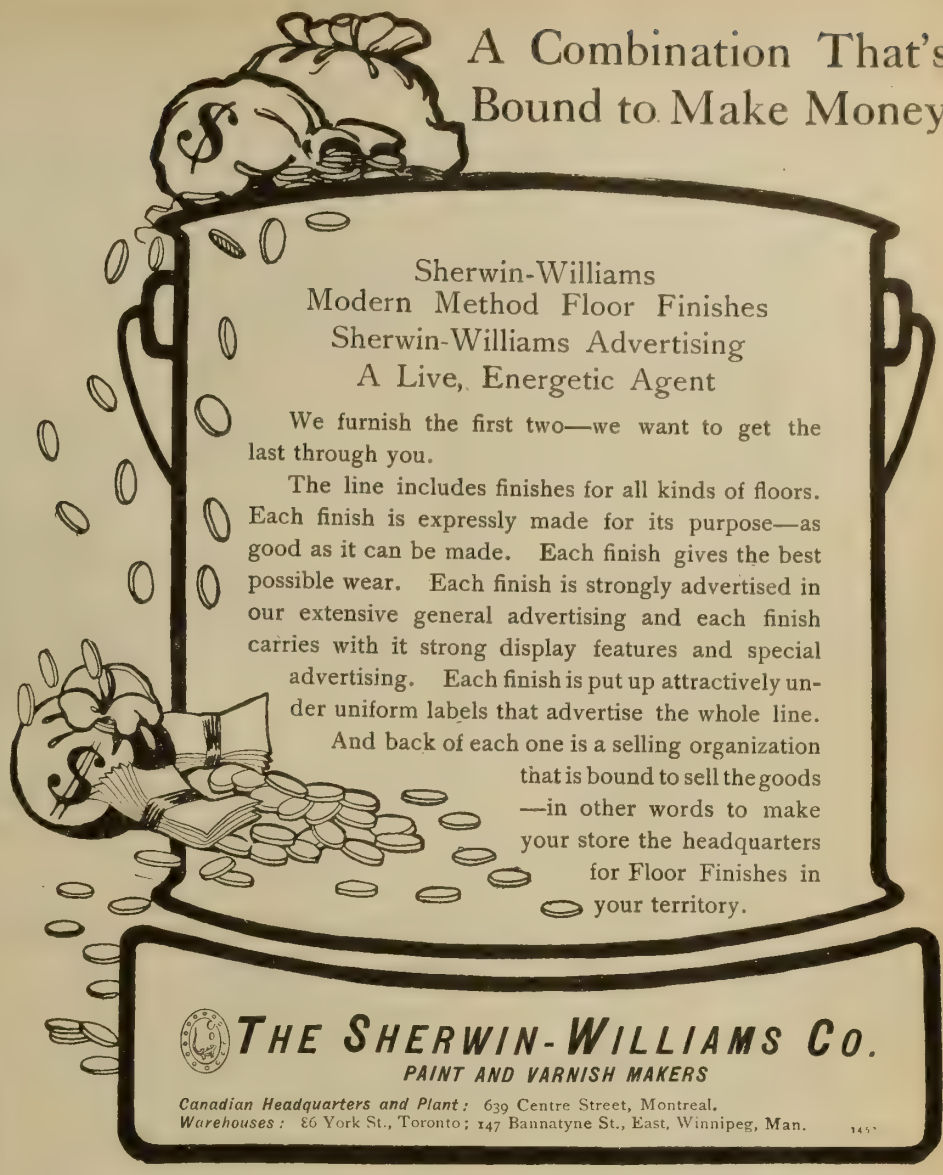
Lifting magnets may be used to great advantage in handling pig iron, scrap, rivets, bolts and similar articles inibulk, as shown in Figs. 1 and 2. Ingots, blooms slabs, billets, bars, plates, rails, structural shapes, pipe, etc., may also be handled to advantage; Fig. 3 being an example.



The Illinois Steel Co. uses fourteen magnets in its South Chicago works alone, and has found the economy in time and labor so substantial that it has decided to use them wherever possible in all its works.

A single design of magnet is not adapted to handling the full range of material above mentioned; on the contrary, the magnet must in every case be designed to meet the form of material to be handled. For instance, there is a wide difference in the design of a magnet for lifting ingots or blooms and one adapted to the handling of thin plates. A magnet which would handle five tons in the form of an ingot might not handle five hundred pounds in the form of thin plates. It is therefore necessary to understand in each case the operating conditions with special reference to the form and range of material to be handled.

A small controller or switch for operating is conveniently mounted in the crane cab.



A drum "D" is mounted on the trolley and geared to a hoist shaft. A twin conductor flexible cable conveys the current to and from the magnet, the drum taking care of the slack. The cable is connected to a pair of contact rings on the drum and the current is conveyed from the controller in the cab to the drum through an extra trolley wire "B" and returned through the common return trolley wire "A."

In this case the twin conductor cable

Method of Wiring.

goes up through a pulley block "T," attached to the crane trolley; back to a block "P," attached to the girder near the cab; down through an idle block "I," and back through block "P" to the switch or controller in the cab. A weight "W" is attached to pulley "I" which rises and falls to take care of the slack cable required.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

"Nature, the Factory and the Home."

A sample of what the printer's art may accomplish. The National Cash Register Co., Dayton, Ohio, in this handsomely illustrated booklet, tell the story of the wonders that have been worked in landscape gardening about their manufacturing plant at Dayton. Thousands of employees are grateful to this enterprising concern for their eminently successful attempt to adjust the relations between nature, the factory and the home, and the welfare movement thus initiated, has spread to many parts of the United States. Such truly philanthropic work is to be recommended to manufacturers the world over.

Canadian National Park.

The Department of the Interior deserve special commendation for their latest publication illustrating Canada's national Park in the Rockies. The cuts are well chosen and the reading matter of such a nature as to make the publication extremely valuable to the tourist.

Vancouver Board of Trade.

The eighteenth annual report of the Vancouver Board of Trade gives in its usual concise and readable form, a statement of the year's official work in addition to an account of the leading industries and natural resources of the City of Vancouver, and British Columbia generally. The volume will be read with interest by those watching the evolution of the Pacific Province.

Hose and Fittings.

A neat catalogue has just been issued by the Canadian Rubber Co., of Montreal, dealing with the many different lines of hose manufactured by them. The booklet contains sixty-four pages and cover, the latter being of heavy, dark brown paper, printed in black, and decorated with gold. Prices are given on all kinds of rubber hose, including garden, steam, air drill, pneumatic tool, air brake, brewer's, etc. An idea of the growth of this company is obtainable from comparing illustrations of their present factories with that of 1854. Dealers who are interested in these lines, should send for Catalogue E. and mention Hardware and Metal.

Power Transmission Goods.

Condensed price list No. 25 has been issued by the Dodge Manufacturing Co., 419 St. James street, Montreal, the booklet comprising 16 pages and containing illustrations of the various classes of goods on which prices are quoted. If the name of this paper is mentioned a copy will be sent to any dealer or user of these goods.

There are **HAMMERS** *that "Knock," and there are* **HAMMERS** *that convince. We employ the convincing kind; for instance, we say contact with the Hammer will not discharge an*

IVER JOHNSON REVOLVER

And then we use our **HAMMER** *just to demonstrate the truth of our assertion. We call this a convincing argument, not "Knocking."*

FITCHBURG, MASS.
New York Office: No. 99 Chambers Street.

Cordage and Binder Twine.

The Consumers' Cordage Co., Limited, of Montreal, have sent out a price list for Manila rope, sisal rope, Russian jute, packing and sundries, with particular emphasis on transmission rope. Mention this paper in sending for a copy.

Art Metal and Wire Work.

Chas. Amos & Co., Detroit, Mich., have issued an interesting series of catalogues giving prices on fences, entrance gates, decorative bronze and brass, art grille work, and builders' wire, iron and brass work. All of these booklets are well illustrated, and will be sent to any dealer interested in these lines, who mentions Hardware and Metal. Catalogue 50-A deals with decorative bronze, brass, iron and wire work for buildings, and grounds, the designs being very artistic and the general lines illustrated being too numerous to describe singly. Catalogue 60 deals more particularly with bankers' and commercial metal furniture and wire goods. Catalogue 70 comprises those lines used by builders, such as iron stairs, fire escapes, window guards, sash, bars, counter and floor railings, while catalogue 90 is devoted to fences, entrance gates, mausoleum doors, grills, art glass, memorial tablets, vases, settees, crypt handles, etc. The passing of wood and the coming into more general use of metal and wire goods makes this class of goods very salable and such catalogues as those described should be in the hands of every hardwareman who considers himself up-to-date.

MONTREAL WHOLESALER BURNED OUT.

Starke Hardware Co.'s warehouse, Montreal, was completely gutted by fire early Monday morning, and the total loss was in the neighborhood of $125,000. The flames originated on the top storey of the building, and worked down to the basement, the trouble, apparently, being due to defective wiring.

The Starke Co.'s premises are situated in the north end of the stone block on St. Peter street, owned by the Grey Nuns. The stock included a large amount of cartridge ammunition, the explosion of which seriously injured one of the firemen.

The thick fire walls kept the flames from spreading over the whole building, but, as it was, the Montreal Suspender & Umbrella Co., and the Hiram L. Piper Co., Limited, manufacturers of railway supplies, suffered from fire and water.

There is $80,000 insurance on the stock of the Starke Hardware Co., and $7,000 on the building. The Royal and Hartford Insurance Companies carry the heaviest risks, each being liable to $15,000.

BUILDING AND CONSTRUCTION

BUILDING NOTES.

Wm. Hendrie, jun., is to erect a $9,000 residence at Hamilton.

The Goderich Elevator & Transit Co. will likely rebuild their elevator.

The Bank of Montreal are erecting a two-storey brick building at Raymond, N.W.T.

About 100 single and twenty double houses are being built at Guelph this Summer.

Since March 1 building permits have been issued at Edmonton amounting to $341,695.

The Boharm Elevator and Trading Co. will erect an elevator at Boharm, near Moose Jaw.

J. W. Woods, Ottawa, has bought a block of property in Hull on which to erect a factory.

The Great Northern Railway are to construct a depot at Fernie to replace the one burned down recently.

E. J. Taylor, Edmonton, is to build a $3,300 resibence, and R. S. Parkin, of the same town, a $1,400 one.

Barrie has had a record year in building $200,000 being spent, in addition to which the G.T.R. spent about $180,000 there.

A movement is on foot to build a Jewish synagogue at Berlin. It is likely that a large opera house will be erected there in the near future.

C. E. Benell, Brandon, has secured the contracts to construct a line of elevators for the Dowd Milling Co., on the Arcola branch of the C.P.R.

Real estate sales in Montreal last week reached a total of over half a million dollars, which is, so far, the best showing for any week this year.

The new Kelly-Burnett block at Vancouver will cost $35,000. The Blue Ribbon Tea Co. will also erect a $26,000 building at the Terminal City.

A public meeting of the Montreal Board of Trade will be held next month, to consider the fire protection of the city and to suggest needed improvements.

N. R. Darroch, St. Thomas, has prepared plans for three-storey cement warehouse on Railway street for Joseph Griffin. Building will be 40 x 75 feet.

Among the large buildings to be constructed at Guelph are the new C.P.R. station, to cost $40,000; the Homewood Sanitarium additions, $100,000, and the armory, $100,000.

The value of buildings for which permits were issued in Vancouver during the month of July is greater by $57,700 than the value for June. Permits issued during July totaled in value $189,200, while the total for the month of June was only $131,500.

The C.P.R. are to erect twelve new stations on its new Guelph and Goderich iln. At Guelph and Goderich fine new stations will be built at a cost of from $35,000 to $45,000 each. At Elmira, Blythe and Milverton the stations will cost $8,000, and Monkton, Millbank, Weisenburg, Wellington, Linwood, Walton and Auburn will get $6,000 depots.

Robert Simpson & Co., of Toronto, have purchased two buildings on the corner of St. Catherine and Windsor streets, Montreal, and will commence the erection of a large department store there next May. In the meantime, the company will try to purchase a block of the adjoining property. The price paid for the land already acquired was $18 per foot.

The Lehigh Portland Cement Co., of Allentown, Pa., have closed for the purchase of some 10,000 acres of limestone and clay lands lying east of the Belleville Portland cement plant, and will commence shortly to make clearings and erect storehouses, machine shops and dwellings, preparatory to erecting a plant next spring of 4,000 barrels per day capacity.

Amongst the new buildings to be erected at Hamilton are the following: W. H. Northcott, residence;, $1,900, and two brick houses, $3,000; H. Gumms, house, $1,500; T. Lovejoy, two houses, $2,900; S. McPhie, five brick houses, $5,000; J. Hummill, dwelling, $1,600; T. Robson, three dwellings and greenhouse, $5,600; Hamilton distillery, $3,000; and D. Brown, residence, $2,400.

Hon. Raymond Prefontaine this week inspected the immense works now going on at the Tarte wharf at Hochelaga, Montreal. He was enthusiastic in his commendation of the work, which is the greatest wharf structure in the new world. When completed, this huge wharf will be able to accommodate six steamers as large as the new turbiner Virginian. For four years this work has been in progress, and it is expected that in a couple of months it will be ready for business.

The season's building at Winnipeg is steadily creeping towards the eight million dollar mark. Up to date 2,050 permits have been issued, and the aggregate cost represented totals about $7,700,000. If things keep on at the present rate the $10,000,000 mark will be reached before the end of the building season. This year there are few very extensive buildings, and the permits for the most part cover residences and blocks.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

POWER was turned on last week at the plant of the Wahnapitae Power Co. and active work will be commenced soon. The plant is established at the falls two miles below the Village of Wahnapitae, and the company have expended $100,000 in building and plant. They propose to develop 5,000 horse-power, and the expectation is that when the C.P.R. establishes a divisional point at Sudbury the company will furnish them with the power they need. In the meantime the Town of Sudbury will be supplied with power to operate its municipal electric light and water works system.

A patent wire fence factory is to be established at Emerson, Man.

The Canadian Northern Railway will build a spur line into Battleford this Fall.

Tacoma capitalists have secured a site for a $30,000 furniture factory at Vancouver.

A large factory to manufacture mining machinery is likely to be established at Vancouver by J. P. Smith, of Colorado.

The Sutton Lumber and Trading Co. propose to erect a large saw mill at Clayoquot on the western coast of Vancouver Island.

Eri, Pa., capitalists have invested a large sum, said to be $50,000, in the Ontario Pipe Line Co., and will carry on the company's work.

Tenders for the construction of 275 miles of the Grand Trunk Pacific Railway on the main line west of Portage la Prairie have been called for.

Arrangements have been completed for the erection of the Maple Leaf Flour Mills, with 2,000 barrels capacity, at Kenora, power to be taken from the Winnipeg River.

Over 3,000,000 logs will be brought down the Ottawa River this season by the Upper Ottawa Improvement Co. This is a much greater number than has been brought down for some years.

Elliott, Woodard & Logue, Phoenix, B.C., have been awarded the contract for the clearing of the balance of the right of way for the high tension pole line of the West Kootenay Power & Light Co., for their extension from Bonnington Falls into the Boundary.

Three hundred men are at work installing a power plant at Kakabeka Falls, and the company hope to have electric energy available in Fort William this Fall. The foundation of the Ogilvie mill at Fort William has been finished, and work on the superstructure begun.

Electric power will be furnished for the western part of New Brunswick by the large power plant now being built at Aroostock Falls, N.B. Amongst the towns to be served are Fort Fairfield, Presque Isle, Caribou, Limestone and Houlton in Maine, and Andover and Perth in New Brunswick.

The Tariff Committee of the Canadian Manufacturers' Association complains that the anti-dumping clause of the tariff is evaded by German and French manufacturers shipping through Great Britain. The committee wants more rigid inspectorship by Canadian officials and additional legislation if necessary to put a stop to this.

The Canadian Pacific Railway Co.'s two new steamships for their Atlantic service are to be called the Empress of Germany and the Empress of Austria. The first will be launched noxt month and the second in October, and they will register 14,000 tons and will sail 18 knots an hour. The company claim that will be five and a half day boats.

Railway development of Southwestern British Columbia is progressing rapidly. The Nicola, Kamloops and Similkameen and the Midway and Vernon railways are now under construction. Midway seems to be a coming place. President Hill is operating from there on the construction of the V., V. & E., and the British Columbia Copper Co. have made arrangements for the construction of a large smelter there.

The Canadian Pacific Railway management have practically decided to double track their line between Winnipeg and Fort William. This decision on the part of the company means the expenditure of $10,000,000. The company will do most of the work, very little of it being given to contractors. It will take three years and the distance covered will be 429 miles. This will be a great advantage in handling the Northwest crop.

Mr. C. D. Warren, president of the Lake Superior Corporation, speaks very hopefully of the condition of affairs in the district. Steel rails are being made at the rate of more than 500 tons a day, 1,000 tons of wood pulp are manufactured daily, and more than 4,000 men are employed. Contracts for steel rails are booked as far forward as next January, the amount being 75,000 tons, sufficient to construct 1,200 miles of railway.

The Electrical Development Co., of Ontario, whose construction of a transmission line between Niagara Falls and Toronto is nearing completion, have decided to extend their line westward to London as quickly as possible, touching Brantford, Paris, Ingersoll, Woodstock and intermediate points. It is also the intention of the company to build branch lines to Guelph, Galt, Preston, Hespeler, Berlin, Waterloo and other towns throughout the western peninsula.

On the American side of Niagara Falls are at present three power stations, the aggregate output from which is about 150,000 horse-power. The three great stations on the Canadian side will have a total of 285,000 horse-power and two stations on the Welland Canal have at present 26,000 horse-power. This makes a total for the region of 460,000 horse-power, or more than 30 per cent. of the 1,483,000 estimated as the world's present equipment of hydro-electric power. It is expected that the three Canadian Niagara companies will add 120,000 to their present capacity, while provision has been made for doubling that of the Welland companies. The ultimate total comprised within present plans is there-

fore no less than 600,000 horse-power, of which it is estimated not more than 400,000 can be utilized in the immediate Niagara Falls region for a generation to come. It is evident therefore that if the present ambitious plans are carried into effect a considerable quantity of the available power will have to be transmitted a very long distance.

The wonderful Lake-on-the-Mountain at Glenora, near Picton, is likely to be used for the production of electric power. A company has been formed for the purpose of testing the capacity of the lake to see if the supply of water is likely to be sufficient for the purpose. The peculiarity of the lake is that no one knows where its supply of water comes from. Perched on the top of a bluff, 200 feet above the level of the Bay of Quinte and so near the edge of the rock that at one point it is not more than a hundred yards from the side, the little lake, 400 acres in extent, seems designed by nature to be a reservoir for power. A flour mill and a foundry at present lie at the base of the rock and are run by an outflow of about 1,580 cub. ft. of water per minute. This apparently does not fail, and, when the mills are shut down and this draught on the lake is discontinued, the level of its water does not rise. Is it a state of equilibrium with a source of supply at some distance off? And how great draughts can be made upon this source of supply?

—

Companies Incorporated.

The Dominion Automobile Co., Limited, of Toronto, have been incorporated with a share capital of $100,000, for the purpose of manufacturing and dealing in automobiles, motor boats, etc. The directors are: A. H. Beaton, C. L. Wilson, J. McArthur, J. Barber, and C. E. Holland, all of Toronto.

Nicholson, J. C. Judd, E. A. Shoebotham, H. F. Whetter and T. C. Knott, all of London.

The Canadian School of Scientific Salesmanship, Limited, of Winnipeg, has been incorporated with a share capital of $90,000, for the purpose of educating pupils in science and the art of scientific salesmanship, etc. The directors are: L. S. Weber, M. C. Bowman, N. C. Bowman, I. S. K. Weber, all of Berlin, and E. O. Weber, of Winnipeg.

The George Taylor Hardware Co., Limited, of New Liskeard, have been incorporated with a share capital of $40,000, for the purpose of carrying on the business of general merchants and to purchase the stock and trade of Messrs. Taylor Bros., of New Liskeard. The directors are: George Taylor and W. A. Taylor, of New Liskeard, and George E. Taylor, of London.

The Universal Nut Machine Co., Limited, of Montreal, have been incorporated with a share capital of $200,000, for the purpose of manufacturing and dealing in machines for the manufacture of nuts, washers and other hardware. The directors are: A. Hendry and W. Eckenstein, of Montreal; C. A. Duclos, Westmount, H. L. Dinning, of Lachine, and C. Ralph, of Longueuil, all of the Province of Quebec.

No. 16. OSHAWA, ONT. AUGUST 12, 1905

METAL MERITS

Perfect Metal Lath is essential to every building. Time is proving that. It will some day be in every building, Time will prove that with **Perfect Metal Lath** in use, fire, the arch-enemy of contractors, etc., is defeated, cracking plaster is decisively overcome, health is safeguarded and a big amount of fire insurance is saved.

Perfect Metal Lath at 10c. per sq. yd. is within the reach of all. It is the only metal lath made in this country worth enquiring about, for it alone is made on the new principle and by the new process.

WOOD DEMERITS

Wood lath has had its day. Only indifference and want of knowledge permits its use at all. It costs as much as **Perfect Metal Lath,** though not as much as other metal laths, it piles up needless insurance on buildings and renders everything completely subservient to fire, etc. Now, listen! when you are contracting for the hardware for new buildings put in a "word" for **Perfect Metal Lath.** Be sure and say it **costs no more than wood** and is immeasurably superior. We will ship the goods direct to the premises. All you have to do is to put in the "word" and correspond with us. Your reward is the discount. Is this worth your attention? We think so.

ANNOYING CUSTOMS REGULATIONS.

A LARGE firm of hardware merchants have forwarded us the accompanying letter sent them by an English firm in reply to a request that the latter conform to the Canadian Customs regulations in shipping goods to Canada and facilitate the labor of passing them through Customs on the receipt of the goods. The importers merely desired new invoices with proper Customs certificate upon and they were much annoyed on the receipt of the reply from the London house. The letter reads:

"Gentlemen,—In answer to your letter of the 14th inst., if you will send us blank sheets of foolscap with space left for us to make out the invoice, but with the necessary declaration written on by your clerk, we will fill in the invoice part and attach our signature and return to you. These Customs declarations are becoming such a nuisance that it is being discussed here amongst manufacturers whether they will not decline to send any other than the plain invoice. The profit we get on our goods does not admit of our clerks wasting their time in complying with foolish rules such as are demanded by your Government. A simple statement that the goods are of English manufacture should be quite sufficient.

"We are, yours truly, etc., etc."

It would appear that the English firm has a just cause for complaint because of the increasing labor involved in overcoming the red tape surrounding the Customs houses of our importing centres, but it should be equally clear that the proper method to adopt to remedy the evil is not to treat their customers as though they were at fault and make matters more difficult for them, but rather to co-operate with other exporters, as suggested in their letter, in taking steps to secure a repeal of the cumbersome regulations. The importers are not likely to give the English firm any future business unless they give evidence of a desire to treat their customers fairly. It is an old proverb that "when in Rome do as the Romans do," and the Canadian firm is quite justified in taking the view that the senders of the curt letter are not desirous of extending their trade in Canada.

The subject of Customs regulations is an interesting one, and Hardware and Metal would be glad to hear from readers in Canada and the Mother Country regarding their experiences. Can the present regulations be simplified and the importation of goods accomplished with less inconvenience to both exporter and importer?

AN EXHIBITION COMMISSION.

H. J. HILL'S death a week ago has drawn attention to the wonderful development of Toronto's annual industrial exposition, the success of which as an annual event has not been equalled by any city on this continent, or, in fact, in the whole world. Mr. Hill was associated with the Exhibition Association during the last two decades, and aided greatly in its growth from infancy as a fair to the sturdy manhood of a national exhibition. Illness caused his retirement a couple of years ago, and permanent disability has been followed by an early death.

In importance to the industrial development of Toronto, and the whole Dominion, the Canadian National Exhibition is outranked by no existing institution of a similar character, and it is important, therefore, that its conduct should be in the hands of public spirited men, free from lodge and political influence, and exempt from the worry of finding positions for job hunters who have given political service, or have strong lodge influence.

Fortunately the Exhibition Board has been under the control of strong men, whose executive ability has not only resulted in the remarkable growth of the exhibition, but has also kept the board free from charges of corruption or jobbery. Those who have in the past given their time and energy to the board deserve the thanks of the community for their public spirited work. But the question arises: Is not the exhibition growing too large to be considered a semi-municipal institution, and would it not be better to place its conduct in charge of a commission of public men of high standing, whose term of office would be more lengthy than under the present management?

The MacLean Trade Newspapers put forward this suggestion in the belief that the commission form of government of semi-industrial and semi-public institutions is the most modern and successful method of organization, providing the best and most economical service to the community. Dozens of cities have established parks and gardens commissions, and no traveled person will deny that the public secures better service under the commission plan than by having the parks under the control of the municipal council. A comparison of the results of the commission plan in Detroit, Mich., will show its superiority over the aldermanic committee system in Toronto.

The Queen Victoria Parks Commission, and the railway and power commissions, are other examples of the success of the placing of semi-public institutions in the hands of well-known and successful business men, who are prepared to serve the community for the honor of the position. While we have nothing but congratulations to offer the Exhibition Board on the success of their efforts in the past, we contend that their sphere of usefulness would be extended by the establishment of a commission to carry on the important work of the National Exhibition in the future.

TO LOWER EXCHANGE RATES.

FOLLOWING the lead of the American Bankers' Association, the Canadian Bankers' Association will try to recover the money order business of Canada, which is now almost entirely done by different express companies and the Government Postoffice Department. This action will end the practice of banks of charging 15 cents on a cheque whether it was for $3 or $50, and any amount under $5 will, according to the new rates agreed on, be put through for a charge of 3 cents; from $5 to $10 for a charge of 6 cents; from $10 to $20 for 10 cents, and from $20 to $50 for 15 cents.

Retail grocers and general merchants ought to welcome the proposed change to a man, if for no other reason than because it will mean a saving in dollars and cents. If the average retailer stops to consider, his exchange account amounts to no small item in the course of the year. Suppose he accepts one draft a day, and receives payment from customers at the rate of one cheque a day, by no means a high average, since drafts are drawn for any amount from $1 up, it means twelve exchanges a week, forty-eight a month, and 576 a year, from which must be deducted the

number of drafts on which the bank charges a nominal collection fee and cheques payable at par. If 400 exchanges are paid during the year they will average at least $60, an amount which may be out of all proportion to the actual cash turnover.

It is because the wide-awake retailer has become wise to this fact that express and postoffice money orders are coming into general use, particularly for small remittances. The banks, realizing that this trade is theirs by right, and at the same time impressing upon the retailer that it is an advantage to him to have his collections, etc., go through one channel, are endeavoring to make this possible by lowering the present rates of exchange.

MAY CARRY U.S. MAILS.

THE Allan turbiner Virginian is experimenting with United States mails on her present trip from England, and stands to outdo all previous records. She left Moville at 3.20 p.m. on Friday, Aug. 4, and passed Belle Isle at 6.55 p.m. on Tuesday, Aug. 8, a distance of 1,760 knots, an average of seventeen knots an hour. The Virginian landed her mails at Rimouski on Thursday, Aug. 10, at 8.20 a.m. This is equivalent to five days and twenty hours from Moville to Rimouski, not taking into account the seven hours allowed for detention from fog, and breaks all records. For the first time letters posted in England one Thursday were delivered in Montreal the following Thursday.

The question now before the public is, "Can mails for the United States be delivered sooner if carried by Canadian mail steamers?" Can her mails be delivered in Chicago not more than twenty-four hours later than if they were carried by the Lucania running her usual speed? If the Virginian succeeds in doing so the supremacy of New York as a port for postal steamers on the Atlantic run will be seriously threatened. Canada will become not merely the shortest route to the Orient, but to the greater part of the United States as well. Anticipating the fact that there will be even faster steamers than the Virginian on the Montreal route in the near future, the success of her present voyage may mark the beginning of a great change in the mail route between Great Britain and the United States.

TARIFF INQUIRY.

IT has been officially announced that the committee of ministers who are to inquire into the operation of the Canadian customs tariff at the next session of Parliament, will enter upon their work about the end of August or the beginning of September. Meanwhile it is well for parties interested to prepare such information as they intend to submit and to select representatives to appear before the commission. This paper has to listen to a tale of woe from time to time from members of the trade. Such complaints should be aired publicly before this commission if they are to be remedied. Otherwise the customs authorities will conclude that everything is running smoothly, and proceed to pass approval on the present regulations. If it is the dumping regulations that are at fault, a strong representation on this subject should be arranged without delay.

All who come before the committee should be prepared with accurate information respecting the requests they have to make and be ready for cross-examination in matters about which there may be diversity of opinion. Reasonable notice will be given of the visits of the committee to the several points selected, which will include one or more places in every province of the Dominion. All inquiries should be directed to Mr. John Bain, assistant commissioner of customs, Ottawa, secretary of the tariff commission.

THE PLUMBERS' CONVENTION.

A FULL report of the convention of the National Association of Master Plumbers will appear in next week's Hardware and Metal, it being impossible to secure a complete report for this issue. According to telegraphic reports a large delegation is present and in the absence, through illness, of President Robert Ross, Vice-President Hammond is presiding. Secretary Kirkham, of the Winnipeg Association, was stricken with typhoid a few days before the convention opened. This is regrettable, he having done much to perfect the arrangements for the gathering.

TORONTO BRANCH C.M.A.

AN increase of 102 in membership for the year was reported at the annual meeting of the Toronto branch of the Canadian Manufacturers' Association, held on Thursday last. The membership now comprises 497 manufacturers, and the influence of the body is growing in proportion to its increasing size.

Chairman Donald's report was a very painstaking and important document, dealing with many questions of first importance to the City of Toronto. Under the heads: "The Trunk Sewer," "Straightening of the Don," "The Radial Railway," "Front Street Expropriation," "The City Beautiful," Mr. Donald touched upon civic affairs and arraigned the city authorities on several charges of laxity and dilatoriness. The delay in providing better sewage disposal and the delay in straightening out the Don were subjects of comment.

With regard to the question of radials, he said: "The matter of incoming radial railways is very important, and no opportunity should be lost on encouraging these desirable adjuncts to modern city and suburban life. At the same time no greedy corporation should by any means obtain rights which eventually are to be used as a lever to render more valuable interests which at present are clearly defined."

He blamed all concerned for the delay in securing the Front street station site. It was a shame, he said, that a year and a half should pass without some tangible results. Could not some method be evolved whereby this reproach of delay in bridges, wharves, shelters and every convenience, could be done away with?

He was pleased to say that the transmission lines from Niagara were now complete, and that power would be available in a few months.

The report was made that nothing had been accomplished as yet in regard to securing special arrangements with the railways for traders' weekly excursions to Toronto, similar to those prevailing in the States.

Regarding the parliamentary inquiry with respect to the telephone service of Canada, the branch expressed itself as follows: That municipalities should have an absolute right to control the placing of wires within the city. That the trunk telephone lines should be owned by the Government. That all citizens resident in a municipality in which any company has established a telephone system, and who are prepared to pay for services, should be provided with a telephone at whatever rate is established, and the same rate shall apply to all. That all telephone companies should have equal rights in all railway stations.

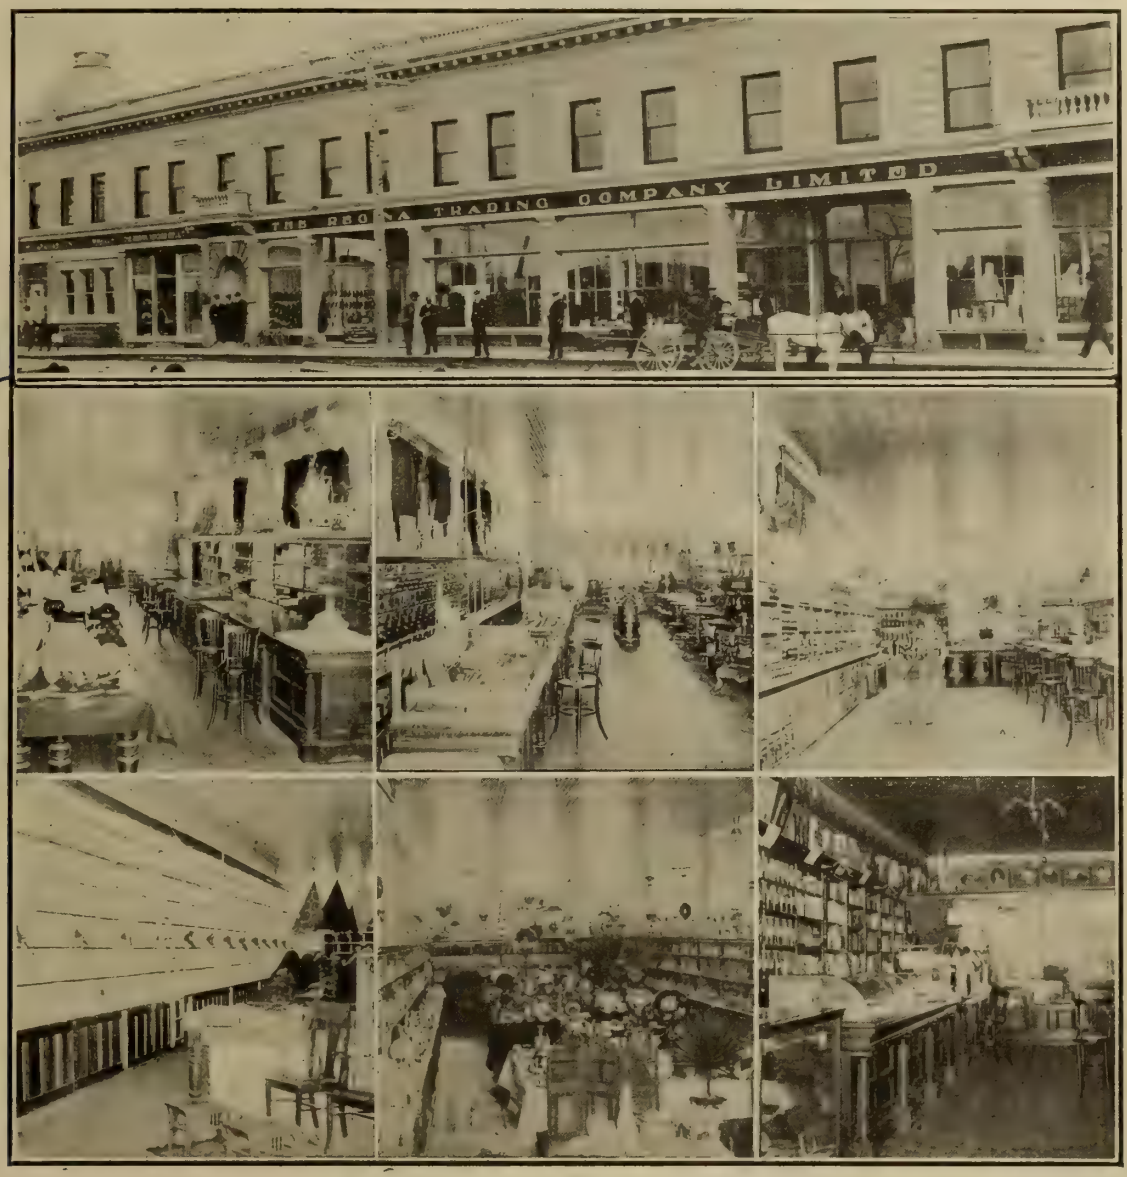
The branch had passed resolutions approving of the immediate construction of a trunk sewer in Toronto, requesting the Government to put express companies under the jurisdiction of the Railway Commission, and approving of the $300,000 by-law for improvements to the Toronto Exhibition.

The election of officers resulted as follows: Chairman, W. B. Tindall; vice-chairman John Firstbrook; committee, H. W. Beatty, S. B. Brush, C. N. Candee, J. W. Cowan, P. W. Ellis, Ed. J. Freyseng, S. R. Hart, A. Jephcott, J. S. King, J. S. McKinnon, R. E. Menzie, W. H. D. Miller, John Northway, A. S. Rogers, Frank A. Rolph.

OBJECTING TO QUEBEC TAX.

ANOTHER aspect of the tax recently imposed on foreign commercial travelers in Quebec has presented itself. This time, the chief objection comes from the Montreal wholesale hardwaremen, who are put to considerable inconvenience and expense by the new state of affairs. Formerly, travelers for large American manufacturing firms, whose goods every wholesale hardware house has to handle, came to Montreal in large numbers, and displayed their samples. Local firms could then buy just as satisfactorily in their own city, as if they visited the manufacturers' premises.

Under the new order of things, however, Montreal wholesalers are compelled to order by letter, or to send their buyers to different parts of the United States to make necessary purchases. The first of these plans is unsatisfactory, and the second is expensive.



As a result, the wholesale hardwaremen will join forces with those who are working for a repeal of the tax, and every effort will be put forth to quash this very shortsighted legislation.

SOME SPLENDID AGENCIES.

Mr. Arch. MacFarlane, Montreal, spent a few days this week on his return from a trip to Pittsburg, Pa., he having just been appointed Canadian sales agent of the American Axe and Tool Co., Glassburg, Pa., and the Prentiss Vise Co., New York two very strong and desirable companies. Mr. MacFarlane is also manager of the Canadian sales departments of the Stanley Works Co., New Britain, Conn., the U. S. Steel Lock Co., Lyons, Iowa, besides other well-known and successful American manufacturing concerns.

ENTERPRISING REGINA STORE.

ONE of the most important commercial enterprises in the Northwest is the immense store of the Regina Trading Co., Limited., which is illustrated in the accompanying engraving, showing the great frontage of 128 feet and views of a number of the important departments. The store occupies a whole block, and is said to have a greater frontage than any store between Toronto and Victoria.

ONE OF WESTERN CANADA'S MOST UP-TO-DATE STORES.

The company began business in 1898, but in 1903 it built larger premises, the enlargements providing 35,000 square feet of floor space. A stock of $100,000 is carried, and thirty employes are required to conduct the various departments, which include hardware, plumbing, tinsmithing, groceries, dry goods, boots and shoes, clothing, drugs and stationery, china and glassware. A feature of the business is the mail order department, which has proved a great convenience to customers in the outlying districts.

PERSONAL AND TRADE NOTES

Toronto.

Mr. W. Brown, of Drummond, McCall & Co., Montreal, is enjoying a week's vacation in Toronto.

Mr. C. A. Stewart, of Wells & Emmerson, Port Arthur, was a caller on Hardware and Metal in Toronto this week.

Mr. Eager, manager of the Toronto branch of the firm of Wood & Vallance, Hamilton, and Mrs. Eager, are spending a couple of weeks in Muskoka.

H. A. Croxall and R. Binch, of the Imperial Hardware Co., Toronto, are in Orillia, getting the plant and machinery of the Faders Foundry in shape for the manufacture of knobs, locks and hardware.

Mr. C. A. Wilson, Barrie, was a caller on Hardware and Metal in Toronto this week. Mr. Wilson has disposed of his interests in the Wilson & McFarlane hardware store at Barrie, and Mr. J. C. McFarlane will carry on the business in future.

Mr. C. A. Moorey, assistant manager of the American Steel Crucible Co., Wellington street, Toronto, lost his life by drowning in Lake Joseph, Muskoka, last Saturday. During a storm the boat capsized and Mr. Moorev in saving the lives of his wife and others in the sail boat, lost his own. He was only about 30 years of age.

Elsewhere.

Stivers and Sanders is the name of a new coal firm at Goderich.

The hardware business of Harry Walker, Orono, has been sold to Alfred Outram.

The Brantford Screw Works are closed down for a few days while a new boiler is being installed.

Sheppard & Elliott, hardware merchants, Fernie, B.C., lost $20,000 in the recent fire in that town.

Thomas Hudson, manager of the Dominion Wire Co., of Toronto, is at Fort William in the interests of his firm.

Mr. W. E. Thompson has purchased Walden's hardware store at North Vancouver for $5,000. The sale merely includes the real estate.

J. R. Deacon, manager of the Manitoba Iron Works, Winnipeg, rescued a young boy from drowning by jumping from his buggy over the railing of a high bridge into twenty feet of water.

Montreal.

Mr. John Reche, of the well known firm of Blaicher & Reche, Hamilton, was in Montreal for a few days this week.

Mr. Edward Leblanc, of the Canada Paint Co.'s staff, Montreal, has just returned from a two weeks' trip up the Ottawa.

Mr. W. W. Mount, of the Sayer Electric Co., Montreal, is spending his vacation at Beaulace, in the Laurentian Mountains.

Geo. H. Pedlar, Jr., assistant manager of the Pedlar People, Oshawa, spent Monday as the guest of Mr. Ramsay, their Montreal representative.

Mr. Gordon Seybold, of Seybold & Sons Co., wholesale hardware dealers, Montreal, is combining business and pleasure on a trip up the Ottawa.

Mr. J. W. Shorney, vice-president of the Toronto Lead & Color Co., Toronto, spent several days this week visiting the leading paint and varnish factories of Montreal.

A. A. Cattanach, of the invoice department of Lewis Bros., Limited, Montreal, left for the west on August 9. Before leaving he was presented with a gold watch and chain by the firm and members of the staff, who expressed their best wishes for his future prosperity.

WILL CHANGE FISCAL YEAR.

The Government have decided to change the fiscal year of the Dominion, so that instead of the Federal accounts, trade statistics, etc., being calculated each year up to the end of June, they will be made up at the end of March. The general opinion is that the beginning of Spring is a better time to open the fiscal year than the present date, especially from the point of view of trade returns. The change to the first of April will allow of the Department's reports being printed in time for Parliament to meet in October or November, beginning with 1906.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 62.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 11, 1905.

AFTER July's phenomenal business, a reaction for August was predicted by some. This has come true only so far as the city trade is concerned, a slight falling off being noticed in the local demand owing to the fact that an unusually large number of Montrealers are patronizing the Summer resorts this year. Country busines, however, is coming in faster than ever, as the travelers are now settled down on their routes again.

The feature of the week has been the great business done in sporting goods. One wholesale house reports the biggest orders on record, for guns. Those on demand are mostly of the cheaper grades, though a few inquiries have been received for the better qualities.

Fall business is now opening up. Orders have come in, during the week, for skates, sleigh bells and horse blankets, which are added to our price list in this issue. A big Fall business is expected, and will probably be in full swing in the course of two or three weeks.

Axes—Are in fair demand, though the season is early. Our prices are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Naturally enjoy the same condition as axes. Our quotations are as follows: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No 3, $1.50 a dozen.

Sewing Machines—Sales are still good, and prices remain steady. We give prices: Hand sewing machines, $11 each net; complete machines with stand, $18 and up, according to quality.

Lanterns—There is little activity shown, owing to the fact that retailers booked orders some time ago, when prices went down. Quotations remain as follows: Cold blast, $4.50; No. 0, Safety, $3.50.

Barb Wire—Practically no sales are now being made. Prices quoted are still: $2.75 for 100 lbs. f. o. b. Montreal; $2.37 1-2 f.o.b. Cleveland Carlots of 15 tons, $2.25 f.o.b. Cleveland.

Fence Staples—Only a few sorting orders have been received. The market for these goods is ended for this season. We quote: $2.65 per 100 lbs. keg, for bright, and $3 for galvanized; 25 to 50-lb. packages 25c. extra.

Rivets and Burrs—Good business is being done, and prices remain as before. Our quotations are as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. cartoon boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—A brisk demand is reported, mostly on sorting orders. Our quotations are as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—No change has occurred on this market. Good orders are being received daily. Our prices are as follows: Three-eighths and smaller, 60 to 10; seven-sixteenths and larger 55 to 5.

Wire Nails—Are always in brisk demand, and no falling off is noticed this week. We quote: $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails— Business is slow, with prices remaining at $2.20 per keg f.o.b. Montreal.

Horseshoes—The Fall business is beginning, and a good many orders have been received during the week. Prices are as follows: P.B. New Pattern, base price, $3.50 per 100 lbs.; M.R.M. Company latest improved pattern iron shoes, light and medium pattern No. 2 and larger $3.65. No. 1 and smaller $3.90, snow pattern, No. 2 and larger $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No. 1 and smaller $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, ten cents per hundred pounds. More than three sizes twenty-five cents.

Sporting Goods—An immense business is being done especially in ammunition, and guns of cheaper grades. This trade is easily the feature of the week. Our quotations are as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax

Building Paper—Business quiet, but satisfactory for the season. Prices remain at our last quotations.

Cordage—Some orders are being sent out into the country from all the local houses.

Cement and Firebrick—Conditions are quiet. There is a good demand for jobbing, but no large orders are being received. Our prices are: English cement, $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch $17 to $21, American $30 to $35.

Coil Chain—Good orders are coming in from the lumbering districts. Prices are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, 3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Spring Hinges—Everything is quiet in this market. Prices are No. 5, $7.25 per gross; No. 19, $18 per gross; No. 20, $18.80 per gross; No. 120, $20 per gross; No. 51, $9.25; No. 50, $27.50.

Apple Parers—Demand is only fair. Prices remain at our last week's figures: Little Star, $4.85; Hudson, $5; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Cherry Seeders—Only a few scattered sales are being made. Prices range from $7.50 to $12.00.

Skates—The Fall demand for these goods has opened up. Prices are 25c. to $2.50, according to quality.

Sleigh Bells—Another indication of the "Fall opening" is seen in the large orders received for sleigh bells. Prices given are: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common 70c. to $1.50, pear shape $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—A wide range of prices is given, according to the quality of goods desired. Quotations are from $4.50 up.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 11, 1905.

FOR this time of the year business is reported very good. Being holiday time, somewhat of a lull in business is to be expected, and the fact that in spite of the season, sorting orders are coming in freely, is appreciated by the wholesale men.

The price of sash cord has been raised this week. "Hercules" has gone up 2 to 3 cents, and "Star" 1 cent. This is the only change in market quotations this week.

Sporting Goods—The season is now well advanced, but fishing tackle is still in demand.

Washing Machines—Buying is as active as could be expected at this season.

Chain—The ordinary Summer trade is being done. We quote: 1-4 inch, $6.50; 5-16 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Dealers are well satisfied with their sales. We quote step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders 40 per cent. off.

Galvanized Wire—Good business is reported at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Coiled Spring Wire—Demands for all classes of wire has been good and the trade are well satisfied. Prices continue the same.

Barb Wire—Demand is reported good and country merchants are ordering in fair quantity.

Wire Nails—Active building is responsible for the record business being done. Nominal quotations are $2.25 f.o.b. Toronto.

Cut Nails—Trade continues satisfactory. Prices are firm. Quotations are $2.40 per keg f.o.b. Toronto.

Horseshoes—Trade is particularly good for this season. We quote as follows: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" are: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Nails—A seasonable trade is noted. Prices are the same.

Screws—The mills are busy, but stocks are satisfactory. The strong demand keeps prices firm.

Rivets and Burrs—A particularly good trade is reported. Prices remain as before.

Bolts and Nuts—No shortage in stocks is expected, although buying is quite active. Prices are firm.

Cordage—Sorting orders are being received. The price of sash cord has gone up, "Hercules" now being 32c. to 35c. instead of 30c. to 32c., and "Star" having advanced 1c. We quote as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30 to 32c.; "Star," 36 to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.: calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white 11 to 13c.

Cement—There is no change in the market this week. Business is very good. We quote as follows: For carload orders f.o.b. Toronto, Canadian Portland, $1.95 to $2; American Portland, $1.95 to $2. For small orders ex warehouse: Canadian Portland, $2.20 to $2.25; American Portland, $2.20 to $2.25.

Firebrick—Business is brisk, demand being strong owing to repairs to plants during the warm weather. We quote: English and Scotch firebrick, 27 to 30c.; American low-grade, 20 to 25c.; high-grade, 27 1-2 to 37 1-2c.

Building Paper— The general activity in building circles has resulted in a good business being done so far this season. Prices are firm.

Hides, Tallow, Skins and Wool—Trade in hides and wool is reported as still active, and prices are expected to be well maintained in view of continued activity. Country hides are showing an advance of an easy ½c. per lb., with lamb skins and shorn pelts at an easy 5c. rise. We quote as follows:

Hides, No. 1 green steers, per lb		0 10
" " 2 " " "		0 09
" No. 1 green, per lb		0 09½
" " 2 " " "		0 08½
Country hides, flats, per lb	0 08¾	0 09¼
Calf skins, No. 1, selected		0 10
" " No. 2		0 08
Lamb skins, each		0 60
Shorn pelts		0 50
Rendered tallow, per lb	0 04	0 04½
Unwashed wool, new clip, per lb		0 16
Wool-washed fleece		0 26
Rejections		0 20
Pulled wools, super, per lb	0 21	0 23
" " extra "	0 22	0 24

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, August 11, 1905.

NOTHING new has developed in the metal markets during the past week, the chief interest being in tin. Ingot tin showed an advance early in the week, but dropped back again to the old figures.

Great difficulty is being experienced in getting shipments of antimony, and some firms find it next to impossible.

The activity in pig iron continues, though there is little prospect of another advance, in the near future. Ingot zinc continues strong, and may be advanced at any time.

Pig Iron—Demand is still brisk, and prices are firm. We quote:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	"	"
Glengarnock	18.25	"	"
Gartsherrie	19 25	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	18.00	"	"
Ayresome No. 1	18.25	"	"
" No. 3	17.50	"	"
Summerlee	18.25 to 18.75	delivered	Montreal.
Clarence No. 1	17.50	"	"
" No. 3	17.00	"	"
No. Cleveland	17.50	"	"

Bar Iron—The market continues lively, at same quotations as last week. Our quotations are as follows: Merchant bar, $1.80; horse-shoe iron, $2.02 1-2; forged iron, $2.05; best refined iron, $2.20 net cash thirty days.

Tool Steel—An improvement in tone is noticed, though prices have not fluctuated. Our quotations are as follows: Colonial Black Diamond, 8c to 9c; Sanderson's, 8c to 45c, according to grade; Jessop's, 13c; Jonas & Clover's, 10c to 20c; "Air Hardening," 65c per lb.; Conqueror, 7 1-2c; Conqueror High Speed steel, 60c.

Merchant Steel—The market is good. Prices remain: Sleigh shoes, $1.87 1-2; tire, $2.07 1-2; spring, $2.75; toecalk, $2.62 1-2; machinery iron finish, $2.10; reeled machinery steel, $2.75; mild, $2 and upwards; rivet, $2 and upwards. Net cash thirty days.

Cold Rolled Shafting—The market is firm at the following prices: Cold rolled shafting, 3-4 inch to 17-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Canada Plates—There is a big demand for plates which keeps prices steady as follows: 52's, $2.35; 60's, $2.40; 75's, $2.45; dull polished, $3.60; galvanized, 52's, $3.90 to $4; 60's, $4.15 to $4.25.

Galvanized Iron—Is active at unchanged prices. We quote: as follows: Queen's Head, 28 gauge, $4.15; 26 gauge, $3.90; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.55; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.50; 16 to 20 gauge, $3.40; Comet, 28 gauge, $3.95; 26 gauge, $3.70; 22 to 24 gauge, $3.45; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4; Gorbal's "Best Best," 28 gauge, $4.15; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots, 25c extra

Black Sheets—No fluctuation in price is reported. We quote as follows: 28 gauge, $2.15; 26 gauge, $2.10; 22-24 gauge, $2.05; 19-20 gauge, $2.20; 8-10 gauge, $2.30.

Antimony—The condition of the market is worse than ever and there is practically no antimony available. Prices are nominal therefore: 14 1-2c. to 15c.

Sheet Zinc—Is also hard to obtain, and the market is consequently very firm. We quote: Cask lots, $7.25; small lots, $7.50.

Tin Plates—Owing to the fluctuations in ingot tin, plates are being anxiously watched. Prices current are: Cokes, $3.75; charcoal, $4.

Ingot Tin—After the jump of early in the week, the market has settled down, and ruling prices are: 34 1-2c. to 35c. per pound.

Ingot Zinc—There is a great scarcity on the market, and an advance is momentarily expected. We quote: 6 1-4c. to 6 1-2c.

Pig Lead—Continues strong, and further advance may be looked for. We quote: $3.75 to $4.50 per 100 lbs.

Boiler Tubes—Last week's conditions still hold good. Our prices are as follows: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12 1-4; 3 1-2 inch, 16c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Scrap Metal—Business is very quiet at present. There is little demand for wrought scrap iron, and prices are nom-

LAFARGE (non-staining) CEMENT

for setting, pointing and backing Limestone, Granite or Marble where freedom from discoloration is desired. Send for descriptive catalogue.

Direct importers of:
Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc., etc

inal. The American market is strengthening, but prices have not yet reached the stage when it would pay local scrap dealers to export: We quote: Copper and wire, 12 3-4s.; light copper, 11 1-2c.; heavy red brass, 10 1-2c.; yellow brass, 8 3-4c. to 9c.; light brass, 6c.; lead, 2 1-2c.; zinc, 3 1-4c.; machinery cast scrap, $13; wrought scrap, $12; stove-plate scrap, $9; No. 1 country rags, 75c. to 90c. per hundred lbs.; old rubbers, 5 1-2 to 5 3-4c. per lb.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, Aug. 11, 1905.

AS usual, the holiday season has caused a slight falling off in the sales, but the market continues to maintain its strength. Antimony is steady this week, but the market is quiet. The demand for zinc spelter has been improving and is now quite active. Copper is very active. Should the Eastern war come to an end the purchases that Russia and Japan have been making in copper will fall off, but how much that will affect the market is difficult to say.

Pig Iron—The usual amount of buying for this time of the year is being done. Quotations continue unchanged, as follows:

Middlesboro, f.o.b., Toronto	$20 00	$20 50
Hamilton, No. 1, at furnace	18 00	18 50
" No. 2, "	17 50	18 00
Midland, No. 1, "	....	18 50
" No. 2, "	....	18 00
Radnor, at furnace	....	30 00
Londonderry, at furnace	16 50 to	17 00

Bar Iron—Market is quiet, but there is an upward tendency to prices, and it is expected that the demand will pick up before long. We quote: $1.85 base, f.o.b. Toronto, with discount of 2 per cent., net cash.

Tin—Market is very strong and buying active. We quote: 35c. to 36c. per lb.

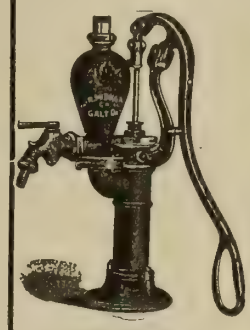
Tin Plates—The market continues active.

Galvanized Sheets—An excellent demand is reported. Prices are steady.

Brass—Conditions are unchanged, business being fairly active. Discounts continue at 10 per cent.

Lead—The market is strong, with stocks light and demand very active. Prices are very firm. We quote: Pig lead, $4.00 per 100 lb., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—The market has been improving and is now quite active. Prices steady. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.



Copper—An active market is ruling. Quotations are unchanged. If the war in the East is closed the purchases from Japan and Russia will be less, but it is difficult to state to what extent that will affect the market. Our quotations are as follows: Ingot copper, 15 3-4 to 16c. per lb., and sheet copper, 21c. per lb.

Antimony—The market is steady this week, and buying is quiet. Quotation is 15c.

Old Material—There is a very active market, with prices unchanged. Deal-

ers' buying prices are as follows: Heavy copper and wire, 12 1-2c. per lb.; light copper, 11c. per lb.; heavy red brass, 10 1-2c. per lb.; heavy yellow brass, 8 1-2c. per lb.; light brass, 6 1-2c. per lb; tea lead, $2.40 per 100 lbs.; heavy lead, $2.60 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $9 to $10, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 5c. per lb.; country mixed rags, 65c. per 100 lbs.

Coal—Prices are unchanged. We quote the following: Anthracite in cars at bridges: Grate, $5.15 per gross ton; egg, stove and nut, $5.40 per gross ton; pea, $3.80 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35: 3-4 inch, $1.25; run of mine, $1.05: nut, 90c.; N. P. and S., 60c.; slack, 40c.: box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run. $2.35; slack, $1.80.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKET.

Advance proofs furnished HARDWARE AND METAL by The Iron Age, August 10, 1905.

WHAT moderate movement has taken place in pig iron has been in basic pig. A large consumer in the St. Louis district has purchased about 25,000 tons, of which about 15,000 tons were from Alabama and the balance from Virginia makers. In eastern Pennsylvania a structural plant has purchased two lots of 4,000 tons each, with additional tonnage pending. All this iron is for delivery during the latter part of the year and into 1906. It is reported that the business was done on the basis of $13, Birmingham, and $15.50, delivered eastern Pennsylvania.

The most interesting fact in connection with the pig iron markets, however, is that it is likely that the Unites States Steel Corporation may re-enter the market as a buyer for next month if the demand for the lighter steel products develops as expected, and as indicated thus far. It is understood that, with its furnaces running at the present rate, the Steel Corporation is drawing upon its stocks at the rate of about 20,000 tons per week, and that if this continues the level of what is considered safe as to the stock of iron will be passed. As an indication of the pressure for iron it may be noted that with the blowing in during the past few days of one furnace at South Chicago and one at Joliet, the Illinois Steel Co. have every stack in the Chicago district in operation.

As throwing a sidelight upon another branch of the industry, we may mention that the charcoal pig iron makers of the northwest were only recently working out the details of a plan for reducing the output by 25 per cent. So large have been the sales during the recent buying movement that that plan is now in abeyance.

It is yet too early to judge whether the strike against the American Bridge Co. is likely to develop any troublesome features. It is not believed that it will be of any consequence locally. Contracting for bridges and buildings has now been practically completed for the season, and comparatively little new work is being added to the overflowing order books of the fabrication shops and the structural mills.

The expected betterment in the Atlantic Coast ship-building industry has come. On the Delaware, six new boats are to be built, the Cramps taking four and the Roach yard two.

The pressure in the rail trade continues and the mills are full of work. The southern and southwestern lines in particular lagged earlier in the year in placing their orders and are now pushing the makers for delivery before the close of the year. Some additional round lots have been placed lately.

Attention is centred now on the lighter lines, since it depends upon the buying movement in them whether the capacity of our producers is to be put to an unusual test. If there should be added to the enormous tonnage now in hand in the heavy branches any really large volume of business in the lighter lines, then our productive capacity will be heavily strained and this will work back to the raw material.

Thus far the indications for good buying are encouraging. The leading interest booked 20,000 tons of wire products in one day lately, and sheets and tubes are being contracted for more freely.

There has been quite a heavy movement for export, among the larger orders recently taken being one lot of 45,000 tons of sheet bars for delivery during the next six months to a leading sheet manufacturer in England and 10,000 tons of skelp for a pipe mill in Canada.

The monthly pig iron statistics collected by the Iron Age show that production in July, a month of 31 days, was 1,741,935 gross tons, as compared with 1,793,289 tons in June. The active capacity on August 1 was 410,088 tons per week, as compared with 408,617 tons on July 1. Stocks have increased from 474,894 tons on July 1 to 500,604 tons on August 1. The increase amounts to 13,089 tons in the east and to 38,357 tons in the central and northwest. Stocks declined in the south 25,736 tons.

LONDON METAL MARKETS.

From Metal Market Report, Aug. 9, 1905.

Pig Iron—Middleboro No. 3 foundry is quoted at 46s. 10 1-2d., and Scotch warrants at 49s. 4d., making prices, as compared with last week, 6d. higher for Middleboro. and unchanged for Scotch warrants.

Tin—Spot tin opened easy at £149, futures at £147 15s., and after sales of 50 tons of spot and 80 tons of futures closed easy at £148 10s. for spot, and £147 for futures, making price as compared with last week. £3 lower on spot and £3 lower on futures.

Copper—Spot copper opened firm at £69, futures £68 17s. 6d., and after sales of 50 tons of spot and 75 tons of futures, closed quiet at £69 for spot, and £68 17s. 6d. for futures, making price as compared with last week, 15s. 9d. higher on spot, and 7s. 6d. higher on futures.

Lead—The market closed at £13 17s. 6d., making price as compared with last week, 2s. 6d. lower.

Spelter—The market closed at £24 7s. 6d., making price as compared with last week, 7s. 6d. higher.

MINES AND METALS.

An excellent coal pocket, known as the Wadsworth Mine, is being opened near Raymond, Alberta. A tunnel has been run 85 feet into the seam, which shows three feet of clear coal.

* * *

Professor Miller, provincial geologist. has returned from a trip in Eastern Ontario, during which he inspected six mines, each producing a different metal. All of these he found in active operation. At Madoc he visited the talc deposits. At Eldorado he observed the working of a copper mine. The iron pyrites mine at Queensborough, the zinc vein at Parham, and the feldspar deposit at Bedford were also inspected.

* * *

It is understood in well informed circles that the Government, when it takes up the cobalt question, will inaugurate a change of policy respecting minerals, and impose a royalty on all mineral products. Under the present law the miners take hundreds of thousands of dollars worth of wealth from the earth for which the province gets nothing. This is one reason why roads are not constructed through the mining districts. The prospectors and speculators are opposed to the royalty, which it is understood the Government will adopt in the near future on an adjustable basis.

* * *

The Dominion Coal Co. has ordered 150 pressed steel cars for hauling coal.

* * *

Officials of the Dominion Coal Co. think the output this year may reach the record total of 3,250,000 tons. Last year the output was 3,023,522 tons, and in 1903 was 3,147,766 tons, or the largest on record. The company owns and has chartered for its trade this season 19 steamers, 20 tugs, and 8 barges. Seven of the steamers are 6,000 tons and over, and four of 5,000 tons and over. The July output was 329,164 tons, against 333,926 tons in June. July shipments were 343,198 tons. against 332,285 tons in June, and 274,486 tons in May.

* * *

The Temiskaming Railway Commission has put a staff of prospectors on the town site of Cobalt, the title to which has been vested in it by the Ontario Government. As the site covers quite a large area right in the heart of the ore-bearing territory, it is quite likely that rich finds will be made, and the province's assets considerably increased thereby.

* * *

The new thirty-drill air compressor at the St. Eugene, the big silver mine in East Kootenay, was set in motion a few days since. It is one of the largest pieces of mining machinery in East Kootenay. The new plant has a capacity of 3,000 feet of air per minute. It will furnish power for thirty machine drills, bringing the number of these machines used in the mine up to fifty.

* * *

A discovery of cobalt has been made near Massey, Ont., on the Whisky Lake copper property of Mr. John A. Montague, of Sault Ste. Marie. The formation is the same as in the Temiskaming cobalt fields. It is thought that the Temiskaming cobalt belt extends right

across New Ontario. Another alleged field of cobalt is reported from Pennefather Township, a few miles north of the Sault, although opinions differ as to whether this find is really the genuine article or not. There is no doubt, however, about the Montague find.

* *

An English syndicate has purchased the Bruce Copper Mines in New Ontario for $1,000,000. A smelter will be built and 100 men employed from the start.

British Columbia Trade News

Vancouver, B.C., Aug. 4, 1905.

A CANADIAN saw mill outfit complete will be in operation in Canton, China, as soon after the C.P.R. steamer Tartar reaches Hong Kong as it is possible to erect the plant. The complete plant for a modern saw mill has been shipped to the "Wan Yip Timber Co., Canton, China," by the Waterous Engine Works Co., of Brantford, through their local representative, Mr. H. B. Gilmour. The purchasers are Chinese, members of the Wan Yip Timber Co., who propose to go into the lumber manufacturing business on modern lines in old China. Practical men, Chinese, of course, who have had years of experience in British Columbia saw mills will operate the mill, and as the raw material can be obtained, there is no doubt the Chinese will turn out good lumber with their new plant, and make their novel enterprise pay. The small opening indicated, opens up a vista of great proportions as to the possibilities of trade in machinery and many other lines in the Orient, after the modernizing processes, including the present war, have got in their work on the Chinese wall of prejudice which has hitherto barred progress in the greatest country yet to be commercialized on modern scale.

* * *

Mr. John Hanbury, of Brandon, Man., is a visitor in British Columbia at the present time. Mr. Hanbury is head of the Hanbury Mfg. Co., who own mills and planing factories at Brandon, with branches through the Province of Manitoba. He has recently been at Elko, in Southeast Kootenay, where his company have established a custom planing mill, where the rough lumber output of many small mills on the Crow's Nest line will be worked up into the finished article to ship to the Northwest market. This new plant is now busy and with a monthly capacity of 3,000,000 feet expects to handle 20,000,000 feet in the season. Matched lumber, house mouldings, and surfaced lumber will be among the products.

* * *

A third railway project touching the wealthy Okanagan and Similkameen districts is on the verge of actual construction. This is the Midway and Vernon Railway, which will connect the Boundary mining district with the Okanagan, running from the Town of Midway, which is on the C. & W. railway, to Vernon, which connects by the S. & O. branch of the C.P.R. with the main line. This new line has been projected for years, but active operations were never begun. Its route is from Midway by the valley of Kettle River, and thence to the southern end of Okanagan Lake and up the east side of that body of water to the Town of Vernon. The C.P.R. have now under construction from Spence's Bridge on their main line a branch into Nicola Lake, west of Okanagan Lake and north of the Similkameen district. The Great Northern's branch from Midway in the Boundary district direct into the Similkameen is now under construction, so that matters are very busy in that small section of the province, hitherto very backward for want of railways. Mr. E. J. McFeely, who has just returned from a trip of inspection over a portion of the C.P.R.'s projected Nicola Lake line, reports everything humming in construction there. The McLennan, McFeely & Co., Limited, have a large contract for hardware supplies along the line, in fact, are supplying all the hardware required by the contractors.

* * *

The Record Foundry Co., of St. John, N.B., have definitely decided in favor of establishing their western branch at Vancouver, provided a site can be secured. Options have been taken on several favorable locations. Messrs. Peters and Milner are both in the province looking into the preliminaries of the proposition. They may buy a plant already erected in the city and adapt it to their business.

* * *

Southwestern Alberta and Southeastern British Columbia will one day ere long be active in the oil-producing field, if half the prospects now being looked into turn out half so well as they appear likely to. Mr. J. B. Ferguson, who is interested there, recently returned from an inspection of the work being done. His company are sinking a second well, in which oil prospects show very strongly. On the same location, Oil Creek, the Rocky Mountain Development Co. are pumping a well giving sixty barrels a day, and are operating a small refinery. Well No. 1 of Mr. Ferguson's company furnishes easily twenty barrels a day, but it is thought useless to pump till a refinery is erected conveniently to handle the output at the railway, which is twenty miles distant. When such a refinery is established, pipe lines will be put in and the oil taken to it, so that transportation for the finished product will be available.

LAST MINUTE PAINT MARKETS

Office of
HARDWARE AND METAL
Montreal, Aug 11, 1905.

Turpentine has suddenly become very strong, in the local market, and an advance will probably be noted in the new lists which will be out within two or three days.

* * *

July building permits issued in the City of Vancouver totalled $189,200, being $57,000 more than for the month of June. The most costly building for which a permit was taken out was the big wholesale warehouse to be erected for Messrs. Kelly & Burnett, the building to cost $35,000. The Blue Ribbon Tea Co. are to erect a $26,000 building, for which a permit was also taken out.

* * *

Three Tacoma capitalists are interested in a project to build and operate a furniture factory at Vancouver, provided a water-front site can be secured. They have an option on a suitable location in the east end of the city near the sugar refinery. A decision is likely to be made at once. An investment of $50,000 or more is to be made to commence, and enlargement will follow establishment and building up of the business. Messrs. J. Grantham, G. N. Chaffee and Thos. Burnett are the gentlemen interested.

* * *

Another manufactory, for making mining machinery, is to be located in Vancouver, Mr. J. P. Smith, of the Smith-Wilfley concentrator, having closed a contract for turning out the requisite parts of the well-known machine. The Smith-Wilfley is an improvement under patent on the Wilfley, a machine used in all concentrating plants, and largely in demand in this province. Mr. Smith has Canada as his territory for the manufacture of the machines.

* * *

Smelters continue to thrive in British Columbia. The Sullivan smelter at Marysville, near Cranbrook, British Columbia, turned out between 500 and 600 tons of lead bullion by the Huntington-Heberlein process, and the coming of railway facilities to Similkameen district revives the smelter project at Princeton. There, the coal of the Similkameen, hitherto undeveloped, will be most likely used.

Nova Scotia Trade News

Halifax, N.S., Aug. 8, 1905.

HARDWARE dealers report that trade is falling off. Business during the week was remarkably quiet, much more so than anticipated. Orders are coming in very slowly. Prices are unchanged.

During the week the executive of the Maritime Hardware Association held another meeting to consider the revision of the price list. As before stated in this correspondence, some dealers want certain goods listed, while others are opposed to making the change. It is on this point that the hitch comes. A proposition has been submitted to the St. John dealers, and until their reply is received no decision will be reached. It is expected that the executive will meet again during the latter part of the week.

The dealers are not discouraged by the present outlook. Collections continue fair, and the half year's business ended up much better than expected.

Since the first of the year two hardware firms have ceased to exist, and their business has been distributed among others. The local trade has been considerably affected by the disposal of a hardware stock at fire prices, but this will not have any effect on the distributing trade.

The recent advance in London of linseed oil has not been felt on this market.

The Carritte-Paterson Co.'s tar paper shops at Fairview were destroyed by fire during the week, causing a loss to the company of about $5,000. They had about $2,500 insurance. The building was a new brick one, only erected last year and the plant installed was of the most up-to-date kind.

Construction work on the concrete

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

WANTED.

TINSMITHS wanted; wages 20c. to 25c. per hour, according to ability; must be temperate; steady work to right men. Apply personally and at once to The Pedlar People, Oshawa Ont. (32)

BUSINESS CHANCES.

HARDWARE, tinsmithing and plumbing business for sale; first-class business; good town; rate on the dollar; possession at once. Apply Box 268, HARDWARE AND METAL, Toronto. (32)

GALVANIZING AND TINNING
THE CANADA METAL CO.
TORONTO, ONTARIO.

smoke stack of the new power house for Sydney is now under way, and good progress is being made. When the smokestack is finished this structure will stand 105 feet high, and will be the first of the kind erected in Nova Scotia. The frame work is composed of a thin fabric of steel rods, which are held in place by strong iron hoops. The huge chimney is set in a foundation 14 feet square, and is 3½ feet thick, having an inside diameter of five feet, and an outside diameter of 7½ feet. The walls will be double to within forty-five feet of the top of the stack, and it will be completed about the end of the month.

Business is brisk at Londonderry in all lines. The blast furnace is doing good work since the new manager, James Hartley, assumed charge. The output of the furnace has largely increased, and the iron is of a much better quality. The pipe foundry is also running off large orders. The quality is superior to that previously sent out.

The Furness liner, St. John City, which arrived from London during the week, landed 6,500 barrels of cement at this port.

New Brunswick Trade News

St. John, N.B., Aug. 8, 1905.

THE present may be termed "'tween seasons" for the hardwaremen. The trade in Summer goods has, of course, fallen off to a considerable extent and the demand for Fall goods has not yet set in. But as the Summer trade was, in the main, very satisfactory and as the prospects for the Fall business seem to be bright, the dealers have no reason to complain. One line of goods that sold well and which is now out of season is that of haying tools. The demand for haying implements was especially good, and it is understood that many dealers are left with very little stock of this kind on their hands. Of hardware goods generally it may be said that the demand is of the usual August variety. Prices are firm.

The lumber outlook is something which, though strictly speaking may be outside the realm of hardware, may not wholly inappropriately be referred to again. There is now no doubt that some, if indeed not all, of the local mills will have to close down early this Fall. The quantity of logs on hand is alarmingly small, and there are practically no more available unless there should be a very heavy freshet in the near future. One lumberman has stated that the mills are now sawing at a loss. It need not be stated how great the loss to many classes will be if the mills shut down before the customary time. The situation is causing a good deal of pretty serious thought to many people.

The Maritime Wholesale Hardware Association met recently in Digby, N.S. St. John was represented by a half-dozen prominent hardwaremen. It has not transpired that anything of much importance was done at the meeting. It is known that the question of prices was given some attention, but apparently nothing of particular moment was decided upon. St. John is well represented on the list of officers. Mr. J. A. McAvity, of Messrs. T. McAvity & Son, is the new president of the body, and Messrs. T. C. Lee, of Messrs. W. H. Thorne & Co., Limited; H. N. Coates, of Messrs. S. Hayward & Co., and John Keefie, of the St. John Iron Works Co., are members of the Executive Committee.

Some stir has been caused in the Maritime provincial labor world and among stove dealers of the same territory of late by the difficulty between the Sackville foundry people and their moulders. A little time ago the latter asked for a ten per cent. increase in wages. The companies—the Fawcett and Enterprise companies—declined to grant this increase. Then the foundries were shut down for repairs. The men regarded this as a lockout and went on strike. Negotiations were soon in progress and men of the Enterprise foundry resumed work on Monday last. The terms are not known—this being the agreement—and it is not known what the result of the trouble will be so far as the Fawcett people are concerned.

The Maritime stove dealers met a few days ago in Amherst. Their meeting was the regular quarterly gathering. So far as can be ascertained, nothing of unusual interest or importance was done.

Cement is now finding a ready sale. The demand is regarded as somewhat more active than usual. The price is in the neighborhood of $2.25. The demand for all builders' materials is strong.

THE WORLD'S IRON.

THE amount of iron ore still available is very great, doubtless many times, perhaps twenty-fold, as great as has been wont to use. Yet we see already that in the continent of Europe the fields long in service are beginning to be exhausted. Great Britain has practically consumed its store which a century ago seemed ample. Practically all the supply for its furnaces is now imported. The supply from the Mediterranean, that promised to be inexhaustible cannot endure for many decades to come. The same is the condition of the ore districts of Central Europe; at the rate of the increasing demands they are not likely to meet the demands of a hundred years. There remain extensive deposits of rich ores in the Scandinavian peninsula, and in fields in the confines of Belgium and France which have hardly begun to be drawn upon, yet it is evident that at anything like the present rate of increase in the consumption of metallic iron the European sources of supply are not likely to endure for a century.

The best placed field for the production of iron in North America or save that in Northern China, in the world, is in the central section of the Mississippi Valley, mainly between the great river and the Appalachian system of mountains and northwards beyond the great lakes to the headwaters of the streams flowing into Hudson Bay, the physical conditions on the whole being favorable for the cheap production of the metal and its ready transportation to the principal markets. It is a question, however, if the store will supply the demands of the future.—International Quarterly.

Pintsch Compressing Co., pintsch gas plant, brick, concrete and iron, in Grand Trunk Railway Yard, foot of John street, $10,000.

BUSINESS CHANGES

Ontario.

D. Collins, blacksmith, Cresswell, has advertised his business for sale.

The estate of H. Thayer, contractor, Toronto, is to be wound up.

H. Ellison, mason and barrel manufacturer, Niagara, was burned out.

The Queen City Plate Glass & Mirror Co., Limited, have suffered loss by fire.

R. Clinkscale, proprietor of planing mill, Peterboro, has assigned to H. Rush.

Medlar & Arnot, contractors, Toronto, have dissolved partnership. Peter Arnot continues in the business.

Quebec.

Boyer & Gosselin have been registered as contractors, Montreal.

E. Lc Guerrier has been registered as a carriage maker, Lachine.

E. Begin & Co., contractors, Levis, have dissolved partnership.

J. F. W. Thompson has been registered as a hardware merchant, Montreal.

A. Galarneau & Co. have been registered as hardware merchants, Montreal.

R. D. Clark & Son have been registered as plasterers and contractors, Montreal.

E. Boulanger and A. Lamarche have been appointed curators to J. R. Durand, tinsmith, Berthierville.

J. A. Gervais, hardware merchant, Montreal, has assigned to J. M. Marcotte & Co.; a meeting of creditors was held Aug. 10.

New Brunswick.

R. B. Taylor, carriage painter, Sackville, has assigned to A. W. Bennett.

RECORD CO. EXPANDING.

A. E. Peters, president of the Record Foundry & Machine Co., Moncton, N.B., is in Victoria, B.C., looking into the matter of establishing a branch foundry in British Columbia, Mr. W. E. Millner, of Sackville, N.B., accompanying him. Negotiations are under way for the purchase of the Albion Iron Works, which has a large stove manufacturing plant at Victoria.

The Record Foundry & Machine Co., represented by Mr. Peters, is one of the largest Canadian stove companies, having foundries and branches in all the large centres of population. The company is evidently impressed with the value of having factories at several widely separated points from east to west, so that orders from any place within the Dominion may be filled with the utmost dispatch.

TAYLOR-FORBES IN TORONTO.

The Taylor-Forbes Co., manufacturers of radiators in Guelph, have secured permission to erect a one-storey corrugated iron building for storage purposes in King street west, Toronto. Mr. Adam Taylor, the secretary-treasurer of the company, states that his company want to have the building ready by Exhibition time. Mr. Taylor will be given a permit for corrugated iron, provided the building is not used for manufacturing purposes.

Our Sheet Metal building materials work architectural wonders

"Metallic" sidings and clapboards have all the advantages of brick or stone, none of the disadvantages of wood and many points of superiority over other metal sidings which the dealer will not be slow to recognize.

"Metallic" sidings are very light, strong and rigid; never sag, warp or buckle. They can be had in galvanized or painted steel, simulating stone or brick most perfectly. They resist fire and last a life-time.

Prices low, quality unequalled.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopedia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto, Canada 313

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetroughs and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug. 11, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

CROP reports from all parts of the west continue very optimistic in tone and one result is seen in the confidence of the wholesale and retail trade in the prospects for Fall business. This confidence is evidenced by some heavy orders for Fall delivery.

* * *

On Friday of last week a Hardware and Metal representative met on the street, J. N. Warminton, of Montreal. Mr. Warminton was in Winnipeg attending the big Knights Templar meeting, but he combined business with pleasure on this trip. Gowan & Co., a firm with offices in the Merchants' Bank building, have been appointed by Mr. Warminton his western agents for the sale of "Trojan" box strapping.

* * *

Mr. C. C. Ballantyne, of Montreal, Canadian manager of the Sherwin Williams Co., and vice-president of the Canadian Manufacturers' Association, arrived in Winnipeg from the east on Sunday evening. In conversation with Hardware and Metal, Mr. Ballantyne said his visit portended nothing new in the Sherwin Williams Co.; it was a regular visit of inspection to the Winnipeg branch. Mr. Ballantyne has recently returned from England, and he spoke highly of the hospitality shown the Canadian Manufacturers by the business men of England.

* * *

E. F. Hutchings, president of the Great West Saddlery Co., returned to Winnipeg last week. He was a member of the Canadian manufacturers' party visiting England.

* * *

There are few price changes to record, the only item of interest being a decline in Anchor tarred building paper.

* * *

Screen Wire Cioth—Price is still quoted at $1.55 per 100 square feet. The season's trade is almost over.

Poultry Netting—Prices are as follows for the 2-inch mesh in No. 19 gauge:

NEW CATALOG JUST ISSUED.

PAINT, OIL AND BRUSH TRADES

SUBSTITUTES FOR WHITE LEAD.

IN Germany there is no agreement as regards the satisfactory replacement of white lead by other pigments. Most users of paint admit that the lead pigment can be replaced with safety and even with advantage in certain cases, but assert that for outdoor work it is still indispensable. The only rivals of white lead at present are lithopone and zinc white, barytes being of little importance, and never being used alone. White lead has the advantages of being cheap, of having great body, and of standing weather well. Its disadvantages are poisonousness and liability to blacken in places where gas is burnt. Lithopone, a mixture of zinc silicate and sulphide, is practically level with white lead as regards price and covering power. Its great drawback is that it is not a pure white, but has a yellowish cast, especially in the second-rate brands. Zinc white gives a pure and permanent white, but it is said to be expensive and deficient in body; it is also charged with flaking off under exposure to the weather. For good indoor work, however, it often serves as a perfectly satisfactory substitute for white lead. A great deal of danger formerly due to the poisonousness of white lead has been removed by ceasing to sell it dry, and working it up with oil, etc., in the factory, where it is made, and before it is sold. House painters, etc., are therefore no longer exposed to dust arising from the pigement, while the large scale on which it is treated in a factory enables the manufacturers to set up plant for preserving the health of their hands which a small owner could not afford to supply.

ESSAYS ON LEAD POISONING.

THE Internationales Arbeitsamt, in Basel, Switzerland, has offered the following prizes for essays on means of combating lead poisoning:

1. A prize of 5,000 marks ($1,190) for the best essay upon the most practical method of eliminating the danger of lead poisoning during the process of handling lead ores.

2. A prize of 10,000 marks ($2,389) for the best essay upon the elimination of the danger of lead poisoning in lead-smelting works.

3. Two prizes, one of 2,500 marks ($595) and a second of 1,500 marks ($357), for the best essays upon the elimination of the danger of poisoning in chemical and electrical works where lead is in use.

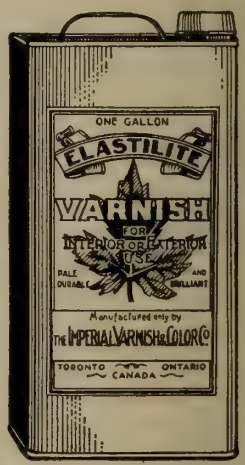
4. Four prizes, one of 1,500 marks ($357), a second of 1,000 marks ($238), and two of 750 marks ($178.50) each, for the best essays upon the most practical method of avoiding lead poisoning in trades such as painting, enameling, etc.

5. Four prizes, one of 1,500 marks ($357), a second of 1,000 marks ($238), and two of 750 marks ($178.50) each, for the best essays upon the elimination of the danger of lead poisoning in factories where large quantities of lead are used, as, for instance, in type foundries, printing establishments, etc.

The essays must contain a systematic description of the source of lead poisoning, in which the mode of production is described and the dangers existing in each stage of the process, in transportation, etc., are mentioned. Other causes of lead poisoning are also to be given, as, for example, working too long at a certain process, uncleanliness, insufficient knowledge on the part of the workmen, bad or insufficient food, irrational mode of living, and unhealthy apartments.

COMBINATION GLAZIER'S TOOL.

The illustration herewith is a new glass cutter placed on the market by the Smith & Hemenway Co., 296 Broadway, New York City. It will prove an excellent tool for any glazier, as there are actually two tools combined in one, there being a glazier's point driver on the end of the handle as will be seen in the cut. They have been working on this tool for almost two years (so we are informed) in order to bring this tool up to the standard in quality, as well as usefulness, and they sell under a strict guarantee that it will cut at least 600 feet of glass, or as much as any single point diamond. The goods are sold at 75c. a dozen by the jobbing trade. The article is branded "Red Devil," as will be seen on the cut, this implies one of their highest grades of goods. Any persons desiring information regarding glaziers' tools or hardware specialties can have same or a catalogue from the above address if Hardware and Metal is mentioned.



Combination Glaziers' Tool.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Mon treal, August 11, 1905.

THE features of the week may be set down as great activity in white lead, and the easing of prices in linseed oil. There was an impression that the demand for lead, which existed prior to July, was mainly to protect against tariff changes, but continued pressure from all parts of the Dominion proves the contrary. Prices are slightly lower than the schedule passed on July 7th, but feeling is firm on account of the active demand.

Linseed oil, in response to easier markets in England, has been marked down two cents per gallon.

Turpentine, after a quiet week, has bounded up again, and our quotation of 88 cents, may be taken as the minimum with prospects of an advance of 2 cents within a few days.

Mixed paints are in fair demand for the season, but none of the pressure experienced during the past two months is evident. The increased price of white lead, and the general advance in zinc and turpentine, lead makers to feel that mixed paints must be advanced correspondingly, but it is doubtful whether effect will be given to this.

Turpentine—Our quotations of last week may be taken as still ruling the market, though it has already been advanced in some quarters. We quote prices as follows: Single barrels 88c. per gallon. For smaller quantities than barrels, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—There has been a slump during the week, but prices are now steady as follows Linseed oil, raw, one to four barrels, 49c.; five to nine barrels, 48c.; boiled, one to four barrels, 52c.; five to nine barrels, 51c. f.o.b. Montreal. Net 30 days.

Ground White Lead—Great activity is manifested in this line. Prices quoted are: Best brands Government standards, $5.35 to $5.50; No. 1, $5.10 to $5.25; No. 2, $4.75 to $5.00; No. 3, $4.50 to $4.75, all f.o.b. Montreal.

Dry White Lead—No change in prices is reported. The demand is brisk. Our quotations are as follows: Barrels, $5.25; 100-lb. packages, $5.50; six or ten-lb. tins, $6.50.

Dry White Zinc—Is very firm at the figures quoted: Pure dry in casks, 7c.; in 100 lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb kegs, 6 1-2c.

White Zinc (ground in oil)—The demand is strong, and there is every prospect of an advance on the prices given: Pure 25-lb. irons 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—The large building operations of the Summer have created a brisk demand. No change in prices is reported. We quote: Pure linseed oil, $1.75 to $1.85; Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—The expected advance has not yet materialized, but the market is very firm. Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—There is great activity in this line, and prices remain steady at last week's quotations: Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—A feeling is abroad among paint manufacturers that the price of mixed paints will soon be advanced. Present quotations are: $1.20 to $1.40 per gallon.

Castor Oil—The market in castor oil is strong, the prices generally quoted being as follows: 8c. to 9c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—Though there is no change in prices this week, the market shows an upward tendency, and an early advance may be looked for.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, August 11, 1905.

WHITE lead has weakened a trifle and is quoted a shade lower than the prices listed a month ago. Red lead quotations are also lower than last week's list.

Turpentine is quoted higher by several firms, and the general tendency seems to be for another advance, prices in the south being very firm.

Linseed oil remains at the former prices, as while conditions are reported to be easier in England, the scarcity of supplies on the local market has not warranted a drop here.

Trade in mixed paints is holding up surprisingly well and there is every probability of the present season's business being the greatest on record. Prices of mixed paints have not advanced yet, but

DECORATIVE ENAMEL

A genuine enamel, imparting a hard, lustrous, non-absorbent surface that always remains bright and attractive, and is the best from a sanitary standpoint. FROM "LIFE"

Multum in Parvo
Much in Little

This clearly describes the "Elephant" Genuine and Decorators' Pure White Lead made by the Canada Paint Company. A **small** package containing a **great deal** of paint!

Undoubtedly the two most popular brands in Canada—The "Elephant" Genuine and the C. P. Co.'s Decorators' Pure—Each Iron bears the guarantee of the White Lead Association as to its purity, and the fact of these brands being made by the Canada Paint Company assures the purchaser of the best white lead procurable.

THE CANADA PAINT COMPANY LT'D

the probable increase may account for a part of the heavy buying.

White Lead—Ex Toronto, pure white $5.40; No. 1, $5.02 1-2; No. 2, $4.65; No. 3, $4.40; No. 4, $4.15 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases. 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—As usual at this season, there is little activity. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass—See current quotations at the end of this issue.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white. $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 54c.; boiled, 57c.; 5 to 9 barrels, raw, 53c.; boiled, 56c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrels, 87c.; 2 to 4 barrels, 86c.; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

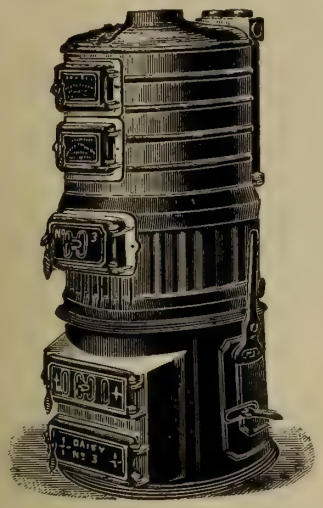
Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

WINDOW GLASS—MONTREAL.

Conditions in the glass markets have undergone no change during the past week. Shipments are now being received from Belgium, but as yet they are only small. Little hope is expressed that the manufacturers will catch up to orders this year. Prices are very steady, as follows: First break, 50 ft., $2; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 fe et,$4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

TO FIGHT THE TURPENTINE TRUST.

THE Naval Stores Export Association, a combine of independent turpentine distillers in Mississippi, Louisiana and Alabama, recently organized with a capital stock of a half million dollars, for the purpose of fighting the Turpentine Trust, is prepared to build a large reservoir tank at Gulfport, from which the product from the distillers in Mississippi will be exported. Practically all of the independent distillers have been enrolled as members of the association, and headquarters for Mississippi established at Hattiesburg. The association will be incorporated under the laws of the State of Mississippi, and its affairs will be directed by Harry C. Neff and C. B. Townsend, the latter for eighteen years having been connected with the Standard Oil Co. Similar organizations have been perfected for Florida. Georgia, Arkansas and Texas, and the independent concerns expect to secure full control of the southern export trade.



THE INDIAN LINSEED CROP.

The recent news with regard to the Indian linseed crop is more serious than might perhaps be supposed, says the Manchester Guardian. The market has been relying upon a good supply from India this year to make up for a certain large reduction in the Argentine shipments. According to all appearances these latter will be about half what they were in 1904, or perhaps a little more than half.

The Indian contribution, on the other hand, promised to be considerably in excess of the 1904 shipments, and up to end of May we had already received 320,779 quarters, as against 202,833 quarters a year ago. By this time usually about one-fourth to one-fifth of the annual quantity has already arrived, and the trade might therefore have expected a total for 1905 of about 1,500,000 quarters, against 1,024,889 quarters in 1904. The official report from India, however, estimates the 1905 crop as something under 40 per cent. of the normal, or 52,000 tons, which, if true, will allow of very meagre shipments only during the remainder of the present year.

STOVES AND TINWARE

THE WORLD'S TIN SUPPLY.

DURING 1904 the production of tin ore in the United States amounted to 159 short tons, which contained from 10 to 70 per cent. of metallic tin and were obtained from deposits near Gaffney, South Carolina, Tinton, South Dakota, and Buck Creek, Alaska. Nearly all of this tin ore was shipped to England for smelting. Although about 10 per cent. of the tin produced in the world is consumed in the United States, there has been practically no production of the metal in this country until the last year or two.

During the last few years the production of tin in the world has not been equal to the demand, and the accumulated stocks of tin that have been held in various countries have become very much diminished since 1896. One of the chief reasons for this increasing demand for tin is the large growth of the canning industry and also of the use of tin boxes and cases in shipping sundry articles.

On account of the demand for tin and the high price it brings, a new industry was started a few years ago which is known as "detinning" tin scrap, and this has now become of considerable importance in the United States. Many hundred tons of metallic tin and chemical salts of tin, chiefly chlorides, are procured each year from the chemical or electrolytic treatment of new tin scrap, which is obtained from tin-can and fruit-can factories.

On account of the value of the metal tin, it is possible to work very low-grade ores if they occur in quantity, and usually little difficulty is experienced in cleaning and concentrating a tin ore so as to obtain nearly pure concentrate. Cassiterite, a tin oxide, is the usual tin ore. Although the American production has thus far been very small, it may be the beginning of what may become an important industry.

Dr. Joseph Hyde Pratt, of the United States Geological Survey, who has written a brief report on the production of tin in 1904 for the Survey's annual volume "Mineral Resources of the United States" states that the total production of tin in the world in 1904, exclusive of the production in China, was 92,243 long tons.

The product comes mainly from the Malay States, Banka and Billiton, Bolivia, England and Australia. A very small quantity is also produced in Austria, Germany, Japan, Mexico and America. There was a slight decrease, amounting to 1,650 long tons, in the estimated production of tin in 1904 as compared with 1903. The consumption of tin in 1904 is estimated at approximately 91,755 tons, which is 2,512 tons more than the actual production.

The tin imported into the United States for the fiscal year ending June 30, 1904, amounted to 40,832 short tons, valued $21,186,311. The greater part was produced in the Malay Peninsula.

MARITIME STOVE DEALERS.

The quarterly meeting of the Maritime Stove Dealers' Association was held at the Terrace Hotel, Amherst, last week. Several of the companies included in the membership of the association are much dissatisfied with their relations with employes and an organized fight against the unions may be instituted. At the present there seems little hope for an immediate settlement of the Sackville difficulty. The moulders have refused the offer of the foundries to give them a five per cent. yearly bonus. They are insisting upon compliance with their demand for a straight increase of ten per cent. in the wages given. This the employers refuse to give. Hence matters are at a standstill.

WHY GRATE BARS GIVE OUT.

The principal cause which contributes to the rapid burning out of the grate bars in a boiler is the action of the furnace heat, which will in time destroy any set of grates, but the want of a proper flow of air through the grates will cause over-heating, whether it occurs through too little air space in the grates themselves, or by these places becoming obstructed through any cause, thus preventing the cooling effect of the air on its passage to the fire. Another reason is found in the impurities of the coal, and especially in the chemical combinations of sulphur and iron, which impurities are found in more or less quantity in all coals. The Practical Engineer says any coal which forms an easily fused clinker will injuriously affect the grates.

BERLIN ALUMINUM WARE.

The latest addition to Berlin's manufacturing concerns is the Berlin Aluminum Works, and the favorable reception that has already been accorded to aluminum utensils augurs a bright future for this industry. The Berlin Aluminum Works are turning out a high-class article, and have every reason to be satisfied with the reception they have got from the trade. The general public have not been slow to appreciate the advantages of aluminum ware. It has many strong points in its favor, such as being odorless and tasteless, being light, clean, free from rust and poisonous substances. Experience has shown that aluminum does not corrode like some other metals, and is not affected by damp air or water. In view of these merits there is no doubt that aluminum ware will continue to grow in public favor.

A Kelsey warm air generator will be used to heat and ventilate the St. Mark's Episcopal church at Deseronto, the contract having been awarded to the James Smart Mfg. Co., Brockville.

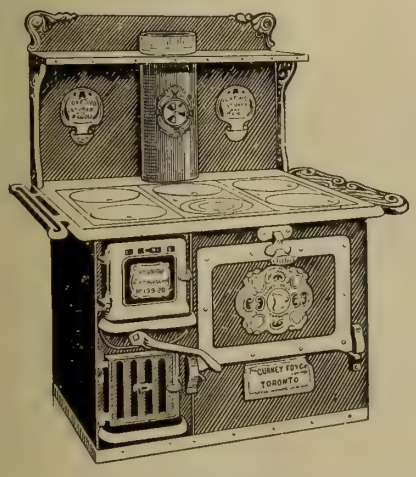
SUCCESSFUL EVERYWHERE.

Critical users everywhere speak most highly of the excellent results given by the

Walker Pilot Steel Range

With its baking, its cooking and its broiling, they are more than pleased. They tell us it heats water quickly and is most economical in its fuel consumption.

It will pay you to handle it. With its assured satisfaction; its many new and practical features and its good profits, you will find it



"THE EASY LINE TO SELL."

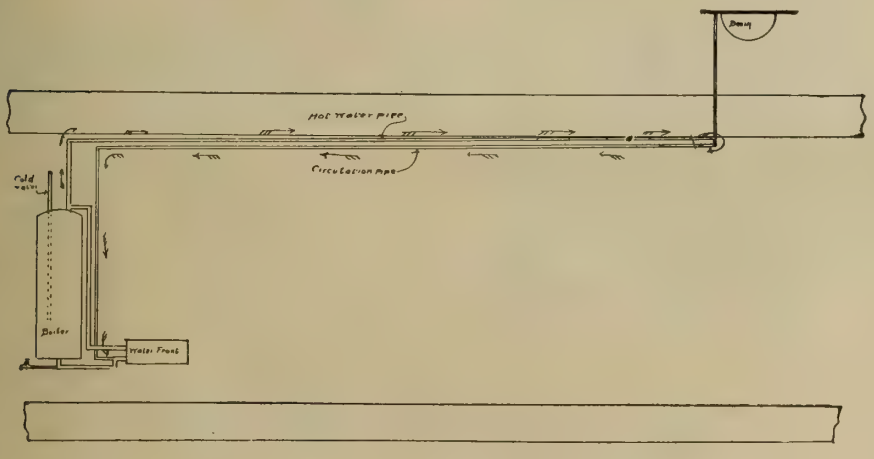
HEATING AND PLUMBING

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

By M. J. Quinn, Mechanical Superintendent for the Ontario Government.



[Registered in accordance with the Copyright Act]

Article XI—*Continued.*

INSTANTANEOUS HOT WATER AT A DISTANCE FROM BOILER.

OCCUPANTS of large buildings, such as apartment houses, etc., often suffer annoyance because of the length of time taken to get hot water through the hot water tap, due to the fact that the water in a long stretch of pipe, connecting the tap with the boiler, must be run off, and the pipe heated, before any hot water is available. We show in the illustration how this difficulty may be overcome.

It will be noted that the boiler is connected to the water front at top and bottom, instead of side and bottom, and that from the top of the upper connection is taken the "hot water pipe" to

the basin, and it will be obvious that with that pipe alone, and with the tap shut off, that the water within it would stand still.

If, however, a second pipe is connected to the hot water pipe at a point near its extreme end and run back to and connected to the lower pipe between the boiler and water front, as indicated, and both pipes are slightly graded upward toward the basin so that all contained air may escape through the tap when in use, a continuous circulation of hot water will take place, exactly as it would in the pipes supplying a radiator with the result that the moment the hot water tap is opened there will be an instantaneous supply of hot water.

NEW DEPARTURE IN METERS.

THE Sangamo Electric Co., of Springfield, Illinois, and Windsor, Ont., have lately placed on the Canadian market a new meter for use on direct current circuits, which marks a distinct and radical departure from the style of instrument hitherto in use, both in this country and the United States.

In principle, the meter is of the mercury contact type, widely and successfully used in Europe for many years, not to be confounded, however, with the mercury deposit meters, used years ago, and now entirely discarded. Owing to its peculiar and perfect design, and construction, spilling or oxidization of the mercury is impossible in the Sangamo meter.

Having no commutator and no brushes, the tendency to become slow on light load, due to friction and dirt at the commutator and brushes, has been eliminated entirely. The very slight thrust against the jewel in the upper bearing of the meter, not enough to cause appreciable friction, or to crack the fine flat jewel used, reduces jewel-friction, causing a meter to run slow on light loads, to a minimum. As the Sangamo meter has no permanent magnets, the change of strength of permanent magnets, caused sometimes by a heavy overload, or a short circuit weakening the magnets, is a trouble not to be anticipated or found in this meter.

An entirely new idea, perfected and adopted in the Sangamo meter, makes the adjustment for heavy and light load extremely simple, positive and satisfactory. The very slight thrust on the jewel, and the tendency of the mercury about the disc to damp out quick movement vertically, make the new Sangamo meter particularly desirable for street car work, where the racking and vibration would soon beat the jewel out of any ordinary meter.

On account of the extremely strong magnetic field produced by the shunt coils, and the small air-gaps in the magnetic circuit, where the disc passes, external magnetism has no effect on the meter, any such influence being further nullified by the iron return plate above the disc, and the iron back of the meter, which acts as an excellent shield.

In appearance the new D. C. meter is similar to the Gutman meter. The case, either aluminum or glass, is held on from the front, two long screws passing through the bosses on each side of the case to the iron base. These screws are sealed over, but can be readily removed without taking the meter down, in case it is necessary to inspect or readjust it.

The Sangamo-D.C. meter is the smallest D.C. meter ever made, being 9 inches high, 5 1-2 inches wide, and only projects 4 3-4 inches when installed. John Forman, 708-10 Craig street, Montreal, Canadian agent for the Sangamo Electric Co., reports great success with the new meter and invites enquiries.

ICE MAKING AND REFRIGERATION

AT this time of the year, when people in this country are suffering more or less from the heat, an account of an ice-making machine that is portable and that may be adapted to domestc use should be of interest. Ice gathered from rivers and bays is not always of the purest, and epidemics have been known to have their origin in an impure ice supply. The illustrations herewith given show a combined ice-making and refrigerating machine, manufactured by the Brunswick Refrigerating Co., New Brunswick, New Jersey. In this machine it is recommended to boil six or eight quarts of water for ten minutes, allowing it to cool under cover. The ice can connected with the machine is then filled and placed in the receptacle in the refrigerator box, and in ten hours there will be ten pounds of sterilized, hygenic ice.

The machine, consisting of a complete

refrigerating plant on a small scale, has a capacity equal to the melting or the use of 200 lbs. of ice per day. It works automatically, and the refrigerating apparatus is installed on the same base as the refrgerator.

PLUMBING GOSSIP.

Collingwood intends constructing tile sewers at an estimated cost of $58,000.

* * *

A water and sewerage system will be established at Banff, Alta., at a cost of $95,000.

* * *

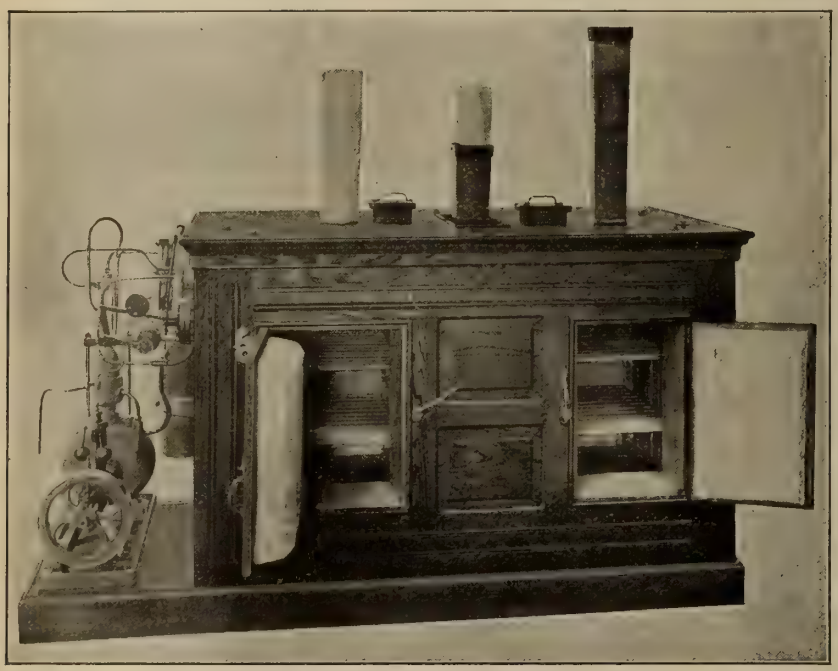
Laurence Munro, architect, will report on the cost of installing modern plumbing in the court house at Hamilton.

* * *

A by-law for $15,000 for the extension of the water works and electric light systems has been carried at St. Mary's.

The Torontonians who will be present at the Winnipeg plumbers' convention include Messrs. K. J. Allison, Wm. Mansell, R. W. Harrison, representing the Master Plumbers' Association; W. J. Cluff, of R. J. Cluff & Co., and E. A. Rogers, of the James Robertson Co., Limited.

* * *



The Montreal delegates to the great master plumbers' convention in Winnipeg are Messrs. John Watson, J. A. Gordon and Walter Ryan. Mr. W. R. J. Hughes, provincial vice-president for Quebec, was unable, through press of business, to accompany the delegates.

* * *

Mr. Adam Taylor, of the Taylor-Forbes Co., Limited, Guelph, has been spending a couple of weeks in Toronto. He can be found at the Taylor-Forbes offices on Richmond street west, where he is always ready to show and tell of the fine qualities of Sovereign radiators

* * *

J. W. Hughes, 811 Craig street, Montreal, has taken the contract for heating and plumbing at the Boys' Home, Mountain street. He is also installing heating and plumbing in the following large private residences: G. A. McNichol, Westmount; E. F. Walters, Westmount; M. J. A. Prendergast and Mrs. Roberts, Preston street.

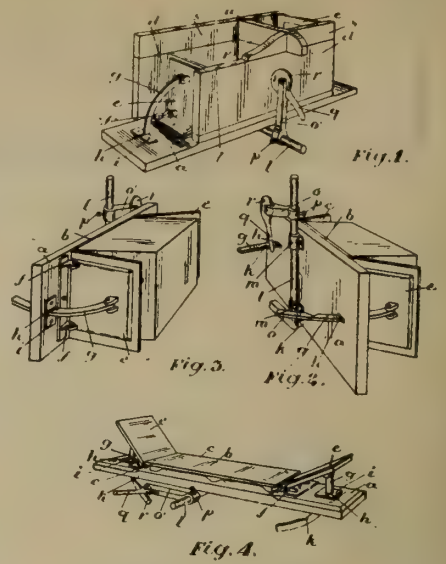
Ice Making and Refrigerating Machine.

Wm. W. Northcote, Victoria, B.C., is calling for tenders up to Sept. 18, for the supply of 1,000 feet of 12-inch and 12,000 feet of 4-inch cast-iron water pipe.

* * *

John Cockburn, a plumber, was instantly killed at Connybear's Gate, near Lethbridge, Alta., by coming in contact with an electric light wire during an electrical storm.

* * *



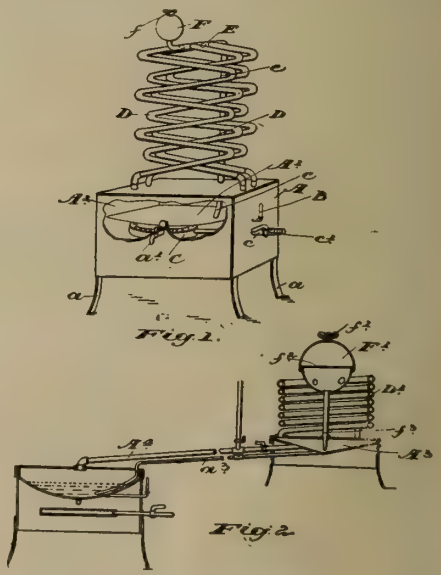
Toronto journeymen plumbers and steamfitters promise a good time and a good list of sports at their excursion and picnic to St. Catharines on Saturday, Aug. 19.

* * *

Over a dozen delegates and supply men left Toronto last Friday to attend the plumbers convention at Winnipeg, the body including representatives from Toronto and the eastern points.

MOULD FOR CEMENT BLOCKS.

Patent No. 787375, issued to Frank Gutteridge, of Seaforth, Canada. This invention relates to a portable mould for the manufacture of that class of building material known as cement blocks. Figure 1 is a perspective view of the mould-box, showing the side and end members in their enclosed position. Figure 2 is a perspective view showing the mould-box upset to deliver the moulded block, with one of the side members removed and both end members opened, so as to be moved out of contact with the moulded block. Figure 3 is a similar view to figure 2, but looking at



Mold for Cement Blocks.

it from the opposite side. Figure 4 is a perspective view, showing the bottom and end of members of the mould-box.

PORTABLE STEAM RADIATOR.

Patent No. 788705, issued to Helen Harriett Cook, Toronto. It relates to improvements in portable steam radiators and the object of the invention is to devise a radiator of this class whereby the heat may be applied directly underneath the radiator itself, or in close proximity thereto, so that all the units of heat may be utilized to the greatest extent and thus fuel economized. It consists essentially of a casing supported on suitable legs and provided with a hot water receptacle on the top,

Portable Steam Radiator.

and the gas heating means for such receptacle located beneath it, and a plurality of coils extending from the top of the casing to a condensing bulb and a pipe leading from the condensing bulb to the water receptacle, the parts being otherwise arranged and constructed in detail. A perspective view showing the approved individual radiator is given.

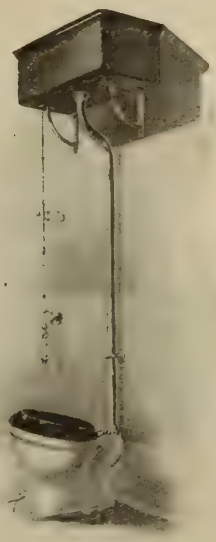
MUELLER FULLER WORK

STANDARD GRADE BIBB

It is nearly impossible to close fuller bibbs without water hammer if the closing depends wholly upon the ball, because the ball seats too abruptly.



In front of the ball in Mueller Fuller Bibbs a conical flange partly closes the opening before the ball is seated. The force of final closing is thus reduced sufficiently to prevent water hammer.

Mueller Fuller Bibbs are made in plain and hose patterns and with tail pieces for all styles of pipe connection. The bibb illustrated is the plain pattern with lead pipe tail piece.

Each bibb bears the Mueller trade mark and is *unconditionally guaranteed.*

THE "BEST" ALONE PAYS

This fact is recognized by every far sighted person and is the reason why you should adopt the NATURO Closet in your trade. This is conceded by those competent to judge to be by far the best Closet that has ever been marketed. The reasons for this are numerous and can be easily explained—the main cause being that it is more healthy than any other. Every sale will net you a good profit and increase your good reputation. Write for our illustrated Book.

THE NATURO COMPANY

Salem, N.J.

THE "JARDINE" PIPE DIE.

THE accompanying illustrations are of the "Jardine" patent pipe die, originated and recently placed on the market by A. B. Jardine & Co., Hespeler, Ont. The new feature in this die is embodied in the manner of obtaining the taper on the pipe. The ordinary solid pipe die is made the correct size with the required taper, and is screwed right onto the pipe, the back of the die reducing the point of the thread to give the required taper. After the adjustable die is adjusted it cuts on the same principle as the solid die. The "Jardine" die is made like and cuts on the same principle as the bolt die. That is, the die is chamfered off on the advancing side for two or three teeth, and thus most of the cutting is done by these teeth, the following teeth simply sizing. The taper is obtained as shown in figures 1 and 2. The body, B, carries the cutters, D, and slides freely up and down in the stock, A, but is prevented from sliding around by the key and keyway shown. A leading screw is cut on the outside of the body, B, with the same pitch as the thread required to be cut on the pipe. As the stock and body, B, revolve, B is drawn into the barrel, C, by the thread on the inside. As B is drawn into the barrel it slides down the four slides, F, in the stock, A, which slides are bored at an angle to the axis of the stock which will give the standard taper for pipe thread. Then as B advances the cutters are pressed out against the walls of the slides, and thus the thread on the pipe is cut with the required taper.

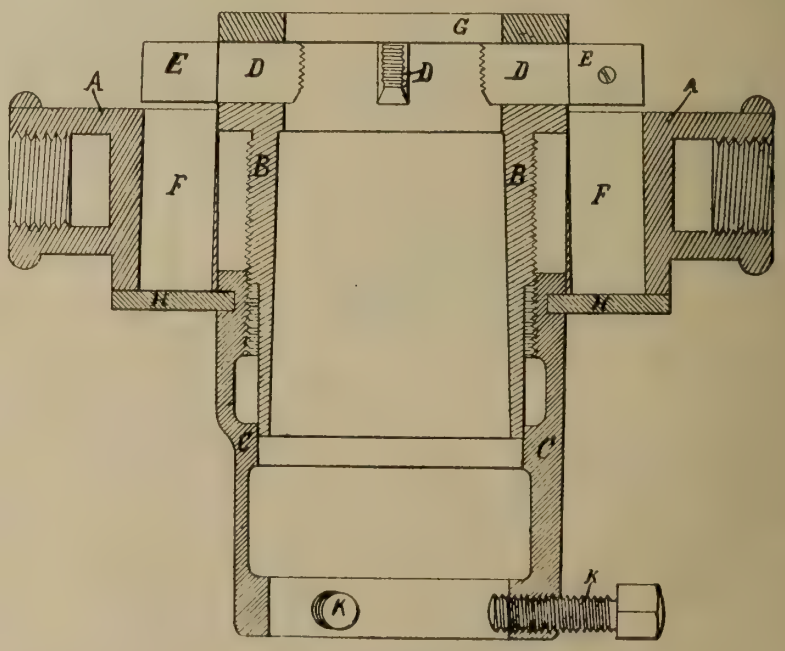
The advantage claimed for the die is the ease with which a thread can be cut compared with ordinary dies, the first three or four threads doing all the work, and the consequent saving of time. To substantiate their claim of time saving, A. B. Jardine & Co. had a test made, which showed that the work that it took a competent steamfitter one hour and 23 minutes to perform with the best type of ordinary die could be done by one of their men with their die in 44 minutes. Besides which the steamfitter required assistance in cutting 2-inch pipe, which assistance was not needed with the "Jardine" die.

"Jardine" Pipe Die.

CO-OPERATIVE SUPPLY HOUSE.

Considerable talk has resulted from Hardware and Metal's announcement last week of the proposed co-operative plumbing supply house in Toronto backed by the Master Plumbers' Association. Advertisements for invoice clerks, etc., have appeared in the daily press and rumor has connected the name of a popular employe of one of the older supply houses with the position of manager of the new enterprise.

NEW FUEL FOR MONTREAL.



COKE briquette is the name of the latest addition to things that burn, and Montreal will be the first city in America to produce it, although several European cities have used it for some years past.

It will be made of granulated coke, mixed with smokeless building material, and made into cubes of about one and a quarter inches each way, under a pressure of about a ton per square inch. The resultant fuel is absolutely clean and dustless and of a high colorific value. It burns slowly and steadily, with a peculiar incandescent glow that makes it a delightful fuel for open grates.

An extensive plant for the manufacture of this article has been installed at the Montreal Light, Heat & Power Co.'s Hochelaga gas works, and it is expected that this will be turning out fifty tons of the new fuel daily before the end of August. Besides the small briquettes for household use, a size about two and a half inches square will be made for manufacturing and furnace purposes.

The special advantages claimed for the new fuel are: Absence of smoke and sulphur, no dust in handling, no deterioration, freedom from cinders, minimum percentage of ash and greater heating capacity than either anthracite or bituminous coal.

From the success which has attended the manufacture of these briquettes in European cities, it is expected that this will develop into a very important and thriving industry in the near future. The price per ton will be about the same as coke.

"Jardine" Pipe Die.

AMERICAN FIRM COMING.

Tunkenheimer Co., Cincinnatti, one of the largest manufacturers of engineers' specialties in America, have decided to invade the Canadian field. A branch office is to be established in Toronto, and the ground between Halifax and Vancouver is to be covered by a man well known to the Canadian trade.

The Waterloo Manufacturing Co. are at present installing a 50-horse-power suction producer plant, with a 50-h.p. gas engine. This gas engine, it is understood, is the only one of its kind in Ontario.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 11, 1905.

CARPENTERS and bricklayers are now working in large numbers on the jobs where the strike occurred, and the effect on the plumbers is no longer felt.

The general tone of business is excellent, and enough orders are now booked to preclude all possibility of a slump this season. September will probably develop large shipments by water to those who wish to take advantage of cheap freight before the close of navigation.

There has been no change in the price of lead pipe, but the continued activity in pig lead keeps it very firm.

The supply houses here are all enthusiastic over their Summer's business, and are confident that the market will continue strong.

Range Boilers—Prices are unchanged, and business continues active. We quote: Iron clad, 30 gallon, $6, and 40 gallon, $7.50 net; copper, 30 gallon, $22; 35 gallon, $24; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Jobbers are still expecting an advance in this line, due to the activity in pig lead. Our prices are as follows: Discount 30 to 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra.; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—Last week's conditions still hold good. Our prices are: Discount on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Iron Pipe—The new discounts, published last week, continue to rule. The market is firm, and large orders, being received, give a good outlook for Fall business. Our quotations are as follows: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 63 per cent.; 3-8 inch, 63 per cent. 1-2 inch, 73 per cent.; 3-4 inch, and upwards, 75 per cent. Discounts on galvanized pipe: 1-4 inch, 48 per cent.; 3-8 inch 48 per cent.; 1-2 inch, 63 per cent.; 3-4 inch and upwards, 65 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30,00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanised, 61 per cent.

Soil Pipe and Fittings—No remarkable developments have materialized during the week. The market is steady, at the following prices: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list. Medium and extra heavy soil pipe 60 per cent. off. Fittings 60 per cent. off.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
August 11, 1905.

SO great has been the demand for supplies that the jobbing houses are experiencing considerable difficulty in securing some classes of supplies, closet bowls being one of the scarce lines. The rush of buisness keeps up and the supply houses say that they are loaded up with business despite the supposed stoppage of buying by the master plumbers, who are proposing to establish a supply house of their own.

Solder has taken a jump upward on account of the high prices ruling for lead and tin, but the quotations on lead pipe are still unchanged.

Lead Pipe—Prices are very firm, but have not advanced. We quote as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 30 and 5 per cent.

Soil Pipe and Fittings—Demand is very keen, but supplies are plentiful We quote as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe Fittings—Volume of business is reported large, the general activity causing heavy buying and keeping prices firm. We quote as follows: Cast iron elbows tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N.P., 70 per cent.; C. I. floor, 80 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper Range Boilers—Price remains unchanged and the 15 per cent. discount holds good as yet.

Galvanized Iron Range Boilers—Good sales are being made, but no fluctuation in price has occurred. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallons, standard, $6; extra heavy $8.50; 40 gallons, standard, $7; extra heavy, $9.50; 52 gallons, standard, $11; extra heavy, $14; 66 gallons, standard, $18; extra heavy, $20; 82 gallons, standard, $21; extra heavy, $24; 100 gallons, standard, $29; extra heavy, $34; 120 gallons, standard, $34; extra heavy, $40; 144 gallons, standard, $47; extra heavy, $55.

Iron Pipe—Heavy buying in large quantities is the feature of the trade. Prices are firm. Our quotations are as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9; 2 inch, $15.75; 3 inch, $30.50. Galvanized, 1-4 inch, $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Prices have advanced in sympathy with the metal markets. We quote: Bar solder, half and half, guaranteed. 19 1-4c.; wiping solder at 17 1-2c., and refined 17 3-4c.

Enameled Ware—There is a very strong demand for Canadian ware. Prices remain the same as last week. We quote: Baths, rolled rim, 5 feet, 2 1-2 inch rim, 1st quality, $17.50. special, $15.50; 3 inch rim, 1st quality, $19.00, special, $17.00; 5 1-2 feet. 2 1-2 inch rim, 1st quality. $19.00, special, $17.00; 3 inch rim, 1st quality, $20.50, special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch. flat rim, 1st quality, $2.45; special, $2.

A SEASONABLE ARTICLE.

An article that should meet with an especially large sale throughout the Fall and Winter is the Twentieth Century White Flame Heat and Light Burner, being placed on the market by the Twentieth Century Manufacturing Co., of New York. This article, which is illustrated herewith, is composed of three separable parts, and in packing are nested compactly in a pasteboard box, the whole package weighing 18 ounces. This burner can be used to good advantage by the hardware dealer for window display, as it not only furnishes light, but at the same time it attracts attention, sells itself and prevents the frosting of the window. The Twentieth Century Co. furnishes with each order a large assortment of attractively printed showcards, electrotypes for local advertising and circular matter. In cold climates the "White Flame" keeps the house comfortable in Spring and Fall, delaying "furnace time," and in dead of Winter, there are frequently bath rooms and other places about the house, that would be better for extra heat, particularly when one can have it with no cost beyond that for the usual illumination. The "White Flame" attaches to any chandelier, wall bracket or portable stand.

PROGRESS IN STEEL WORKS.

ONE of the latest ideas, which is about to be carried out on a very large scale with regard to steel rail mills, is that the rolls shall be driven by motors whose powers will be developed by gas-engines driven by the gas from the blast furnaces. The power thus obtained will be delivered as current to motors at the rolls, to which they will be connected by gear, and will supplant the present steam-engines now in use for driving these rail mills. The improvement in plate-mills for rolling steel plates is as great as that which has taken place in the steel-rail mill. Five and thirty years ago a plate-mill making 100 tons of plates per week was considered to be doing fair work. To-day a mill making a similar class of steel plates, but of much larger area, is turning out easily about eighteen times that quantity, and in America the enormous make of 450 tons has been rolled in twelve hours. These large quantities are again due to improvements brought about by mechanical appliances, for handling large ingots or blooms weighing as many tons with greater ease than was formerly the case when the weight of the ingots was only hundredweights handled by manual labor. Krupp was considered to have done marvellous work in showing an ingot weighing about a couple of tons at the Exhibition in 1851, though it must be remembered that this was made from crucible steel. To-day ingots can be made of almost any weight, and their size is practically governed by the power of the appliances used for moving them. At the St. Louis Exhibition a model was shown of a cylinder weighing 150 tons which had been cast in nickel steel for a 10,000-ton forging-press. Ingots of 60 tons' weight for armor-plates are not infrequent. In plate-mills the improvements in rolling-engines, the adoption of universal rolling trains, enormous hot slab shears, cranes of all descriptions for handling, charging, and drawing material from heating furnaces, cooling and straightening roller tables, cold shears capable of cutting plates up to 2½ inches thick, cooling-floors fitted with castor rollers by which these heavy plates are easily moved, have all contributed to the great outputs of steel rolling-mills, and have enabled steel plates to be produced at prices not dreamt of in former years. This, in its turn, has had a beneficial effect on ship-building, so that vessels are to-day being built of this splendid material at a lower cost than perhaps at any previous period in the history of the trade. The reduced price of plates has again reacted on the cost of vessels. While referring to the improvements in making steel plates and rails, one must not omit to mention the great strides made of late years by hydraulic forging. The forging-press has been much improved upon. Hydraulic presses of 5,000 and even 10,000 tons are not uncommon, and for working large masses the hydraulic forging press seems to have almost replaced the steam-hammer. Another matter that should be mentioned is the progress made in electric smelting. Although this may not be applied largely to ordinary steel-making, there is little doubt that it has a large field open before it for the production of valuable iron alloys.

THE IRON PILLAR AT DELHI.

THOSE who think that we of modern times are the only ones who know how to produce iron forgings will receive a rude shock when they learn that, on the plains of Delhi, the ancient capital of India, stands an immense iron pillar, whose date is so far distant as to be simply a matter of conjecture. It records its own history in a deeply-cut Sanskrit inscription which is said by students to have been executed in the third or fourth century after Christ.

This pillar, unlike the Colossus of Rhodes and the statues of Buddah, which were of hollow pieces of brass or copper riveted together, is a solid shaft of wrought iron.

Several attempts have been made to obtain samples of this iron for analysis, but it is religiously guarded by the natives, who hold it in superstitious awe, so that no complete analysis of the material has been made. This work of an ancient civilization seems the more wonderful when we consider that it is only within recent years that any modern nation has been able to create anything like so massive a pillar of wrought iron.

KEEP A LIST OF LEAKS.

DID you ever seriously try to make a list of the holes through which possibly little bits of profit were constantly dribbling away? Overbuying is a leak. An extra five off for taking a quantity is a saving, but if the quantity lasts you a period of four times as long as the time it takes to get a fresh supply from your market, you have lost the profit on a part of your capital unnecessarily tied up. And if that loss of profit exceeds your saving, it is not necessary to have additional proof that overbuying may be a leak.

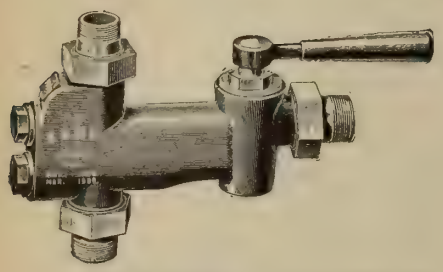
Stowing away goods likely to sell on sight, where they cannot be seen, is a hole through which leak profits that might have been made had the goods been properly displayed.

Failing to care for goods, so that they get shop-worn, and must, therefore, be sold at reduced prices, is another leak. Holding of seasonable goods until they become utterly out of style, rather than getting rid of them by taking a small loss, is still another leak.

Letting windows go unwashed and unchanged is a decided leak. Not only are you thus losing profit on sales that might be directly caused by particular displays in the windows, but you are also failing to improve an opportunity right at hand in the form of those windows to give passers-by most convincing reasons for coming into your store.

Letting your bills go unpaid until too late to secure discounts that may be offered for cash, is another leak. Very few cash discounts are so small but that they afford a profit over and above the interest that would have to be paid were it necessary to borrow money with which to pay the bills.—The Drummer.

HIGH SPEED STEEL KNOWN TO ANCIENTS.



IN a paper recently read before the Iron and Steel Institute, Mr. J. M. Gledhill stated that the famous Damascus steel was in reality nothing but a form of our modern high speed tool steel, for it contained all the important properties of the latter. Marvelous cutting powers have been attributed to it and recent analyses of the material show that it contained certain percentages of tungsten, nickel and manganese. This shows that a latent high speed steel was in existence centuries ago. All that was found necessary in order to bring out its inherent qualities was to "burn" it, a process which was long thought to destroy its usefulness, but which is now known to produce its greatest adaptability to the work in hand and render it capable of effecting a great revolution in machine shop practice.

NEW ROLLING MILLS FOR QUEBEC.

Rumors are afloat in Montreal, that an American firm is considering the establishment of rolling mills, in the province, probably in Quebec City. Color is given to these reports by the fact that several prominent metal men in Montreal were interviewed last week by gentlemen representing large American interests, and existing conditions in Canada were thoroughly canvassed.

NEW COTTON WASTE FIRM.

Rumors are afloat in Montreal concerning the establishment of a new plant at Lachine to manufacture cotton waste. It is said that the demand for this article is particularly brisk, and the profit on it is good. The new firm will start in a small way at first, but they are confident that the business will grow and prosper. Nothing more definite can be learned about the venture as yet.

A NEW LEAD KEG.

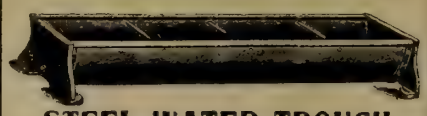
A PATENT keg for packing pure or graded leads has been introduced in the United States, being made of steel in sizes to contain 12½, 25, 50, or 100 lbs. The 100 lb. size is straight in shape, the others being similar to that illustrated herewith. The lid is forced into the keg by a power press or lever, and for additional security the tabs which appear standing up by the junctions of the handle are then bent over. The package is thus prepared for shipping, and is said to be quite air-tight and to keep the lead free from "caking" during transit. Other advantages claimed for this keg by its makers, the American Can Co., of New York, are that it is not collapsible; can be closed tightly again after it has been opened, thus preserving the remainder of its contents when only a part is used at a time; needs no coopering, and can be rapidly filled; is non-inflammable, thus reducing fire risks; and can be employed as a paint-pot after the lead has all been used.

Steel Lead Keg.

FAKE PROPOSITIONS.

THIS is one of the seasons of the year when the trade, particularly retail merchants, are being bothered with fake advertising propositions.

Society, church, and other organizations are holding their annual picnics, games and excursions, and they are getting out programmes in which advertisements are inserted.



The getting of these advertisements is a species of blackmail and some of the methods adopted by representatives of these organizations are disgraceful. The worst form is where an experienced advertising agent publishes these on his own account. He goes to the association some time before their annual picnic is held and offers to supply them with programmes free of cost. He then secures a letter from the president or some leading member of the association, gets a list of firms, wholesale, retail and manufacturing, who do any business directly or indirectly with the individual members of the society. He approaches these firms with a story that he has been sent by an individual member of the organization who is a customer of the firm. If a formal application of this sort does not bring the advertisement, then stronger pressure is brought to bear. Sometimes a firm or individual will say that they do not advertise because they cannot afford to go in all the programmes being issued, and if they went in one it would offend the others; or they give some other good reason for refusing. Then comes the worst form of the fake. The firm or man solicited for an advertisement is then told that the "boys" feel they should have some assistance from him towards the expenses of their games or concert or whatever the affair may be, and a contribution of from $50 to $500 in cash has been secured in this way. Not one cent of this money ever goes to the society as a whole. Usually the fake solicitor puts it in his pocket. Sometimes he shares the plunder with some official of the society. The "boys" or members of the society know absolutely nothing of the arrangement, or the lines on which the programmes have been made up.

Now and then these fakirs are caught. Some years ago two men raised nearly $10,000 in aid of the Montreal Fire Brigade. Everybody contributed, feeling that they were giving something to the brigade. Two or three citizens—if we mistake not, Sir George Drummond, Montreal, and John Labatt, brewer, of London, among them—when they found the thing was a fraud, felt it their duty to expose it, and the fakirs were prosecuted and sent to the penitentiary.

Many leading business men are now familiar with the way this advertising fake is worked and they positively refuse to contribute to it, either advertising or cash. It is to be hoped that any of our readers who are not familiar with the way in which they are imposed upon will in future refuse to be blackmailed.

Whenever you have a few minutes of spare time use it in dusting the stoves you are displaying. Your trouble will be repaid.

HARDWARE MEN: Our

STEEL WATER TROUGH

is a seller—something the average farmer has been waiting for.

We assist the trade by way of generous supply of literature, besides which we are advertising in the farm mediums.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

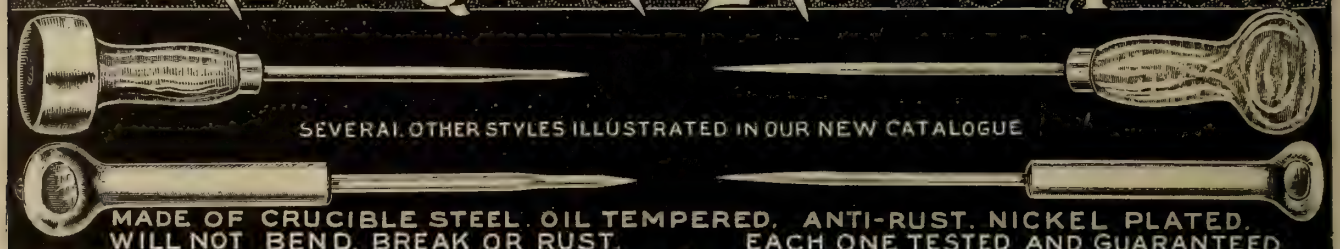
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.



Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

"Open Ring" Pattern

Niagara Cow Ties

Possess certain obvious advantages which have brought them into exclusive use throughout all the great dairying sections in Canada and the United States. We have made these Cow Ties for many Fancy Dairies in the past, and they have now become a regular item of the Hardware Dealers' Stock.

The SWIVEL is made of Steel and is much stronger than any Malleable Swivel, while its action is so free that it never sticks on account of rust.

The TOGGLES used on our Cow Ties are forged from BESSEMER STEEL, by a patented process.

The TOGGLES are so arranged as to always hang at right angles to the Chain, which prevents their becoming unfastened from same.

In a crowded stable this method of fastening confines the animal more and obviates all danger of being stepped upon when lying down.

The Fisk
Detachable Motor Tire

Better than any "air pressure" tire because of its safety. It can't creep or roll or come off, no matter what happens.

Better than any other "fastened" tire, because of its simple and easy adjustment. its circular air chamber which keeps the inner tube from injury and because of its flat and solid base which adds to its comfort and safety.

Manufactured in Canada solely by

New Milo Flexible
Barn Door Hanger

A flexible hanger, impossible to throw it off the track. Made from Malleable Iron, with wrought iron strips and roller bearing. Every hanger is guaranteed to be perfect as to quality and construction.
Prices on the New Milo will interest you.

MANUFACTURED BY

Taylor-Forbes Company LIMITED.
GUELPH
THE LARGEST MANUFACTURERS OF HARDWARE IN CANADA

Jenkins '96 Packing

WE WOULD not say so much about the quality of the Jenkins '96 Packing, were we not so thoroughly convinced of its merits. The color of Jenkins '96 Packing is black, but it is a mistake to suppose that all black packings are alike. Jenkins '96 Packing stands in a class by itself, as it will make perfect joint instantly without having to be "followed up." Simply place the Jenkins '96 Packing in the joint, screw up the bolts tightly when cold, and turn on the steam. You will find the joint to be absolutely tight. Furthermore, we know—as it has been proved by actual use in thousands of steam plants—that as regards durability the Jenkins '96 Packing is unequalled. It will not disintegrate, rot, burn or blow out.

Master Plumbers' and Steamfitters' Convention

NATIONAL ASSOCIATION AT WINNIPEG, AUGUST 8, 9 AND 10.

WHEN one year ago at the convention held in Toronto it was unanimously decided to hold the tenth convention of this association in the City of Winnipeg, there were a few who thought it a rash step to select a place of meeting in the west so far removed from the centres where the association has its largest membership. The result has shown, however, that these fears were groundless; the tenth convention was, in the opinion of several association veterans who have been in the association work almost from the first, the most successful ever held in Canada, and a decided impetus was given to the work of organization in Manitoba which it would not otherwise have received. Ottawa is to be the next place of meeting, but it would not be surprising if Vancouver or Victoria is chosen for the twelfth convention in 1907. Reports from British Columbia were very encouraging and many delegates seemed favorable to the idea of holding a convention in that Province in two years' time. Certain it is that the holding of the 1905 convention in Winnipeg has been a great assistance to those interested in the thorough organization of Manitoba and the results will be seen before the next annual meeting.

The delegates from the east arrived in Winnipeg on Monday night August 7, traveling in a body by way of Chicago. They were met at the station by the Winnipeg entertainment committee and escorted to the Queen's Hotel, which was the headquarters of the association during the stay of the delegates in the city. The entertainment committee appointed by the Winnipeg Association consisted of the following gentlemen: A. J. Hammond, T. A. Irwin, Chas. Plaxton, G. H. Kirkham, Fred. Litster, Thos. Stewart, C. Heinrichs and F. B. Mueller. Unfortunately, G. H. Kirkham, the capable and enthusiastic secretary of the Winnipeg Association, was taken ill with typhoid fever on the Sunday before the arrival of the delegates and consequently the local association were without his services during the progress of the convention.

OPENING MEETING.

The opening meeting of the convention was held in Eureka Hall on Tuesday morning. General regret was expressed by the delegates at the unavoidable absence of President Ross, of Toronto, who because of severe illness reluctantly obeyed his doctor's stringent instructions that he must stay at home. President Ross was very much missed by the association and many of the members took occasion to refer to his well-known enthusiasm for association work and to the faithful service which he had given the association during his year of office. Other familiar faces at previous conventions were missed and their absence regretted. W. H. Meredith, of Toronto, one of the stalwarts in association work, was not present at the convention, and Past President Jos. Thibeault, of Montreal, was also among the absentees. The Montreal delegation explained that Mr. Thibeault had "married a wife and, therefore, he could not come."

In the absence of President Ross, the chair was taken by Vice-President Hammond, who discharged the duties of president so satisfactorily that at a later stage of the proceedings it was unanimously decided to elect him to the position for the ensuing year. Robert W. Harrison, of Toronto, was appointed to assist Mr. Hammond as vice-president, and R. L. Beattie, the vice-president of the Winnipeg Association, acted as sergeant at arms.

Delegates Present.

The following officers were present at the meetings: Vice-President A. J. Hammond, Winnipeg; Treasurer F. C. Johnson, Ottawa; Secretary J. A. Gordon, Montreal; Vice-President for Ontario H. Mahoney, Guelph; Vice-President for British Columbia J. J. Coughlin, Victoria; Vice-President for Manitoba J. Mold, Winnipeg.

Province of Quebec delegates — W. David, J. Watson, W. Ryan, G. C. Denman and J. Ballantyne, of Montreal.

Province of Ontario delegates — Wm. Mansell, R. W. Harrison and K. J. Allison, of Toronto; Hugh S. Wallace and Stephen Mellon, Hamilton; J. Marshall, J. W. Barnes and A. C. Waltz, Port Arthur; Alex. Cameron and E. D. Higginbottom, Fort William.

N. W. T. representative—E. J. Young, of Calgary.

Manitoba representatives—J. Morrison, D. Stockwell, Thos. Stewart, R. L. Beattie, W. Stevenson, R. H. Lear, A. J. Kearnaghan, C. E. Gate and T. A. Irvine.

Opening Remarks.

In opening the first session of the convention, Vice-President Hammond expressed his gratification at the attendance at the convention from the Provinces of British Columbia, Manitoba, Ontario, Quebec and the Territories. This attendance was sufficient proof of the interest taken in the association in all parts of Canada. There was much to be done and he hoped the convention would settle down to serious business.

At this stage of the proceedings it was announced that Mayor Sharpe was in attendance in the anteroom to welcome the delegates to the city. The popular mayor was accorded a gratifying reception as he made his way to the platform. He said it was frequently his duty and pleasure to welcome conventions to Winnipeg, but, perhaps, the plumbers' convention was composed of men who perform more important duties to the public than any others meeting here this year. He was glad to welcome the visitors from the east and west; the local plumbers, like the poor, were always with us, and he would say nothing of them except that the organization had been of great assistance to him in his efforts to promote sanitary improvements in Winnipeg. The preachers and temperance men were doing a valuable work in keeping the town morally clean, but the plumbers were the guardians of the city's health.

Visiting members of the craft would be interested in the material progress of Winnipeg. In two years' time the assessment had increased $24,000,000 and the building permits issued are in excess of $10,000,000 per year. Plumbers would appreciate what such progress must mean for the Winnipeg members of their craft.

The basis of Winnipeg's prosperity lay in the wheat fields of the west, and he hoped the eastern visitors would not return to their homes without seeing the ripening crop. Last week the municipal convention had met in Winnipeg and before the delegates returned they spent a day in the wheat section.

In humorous vein the mayor concluded his remarks by tendering the delegates the freedom of the city during the time the convention was in progress.

Vice-President Hammond.

Mayor Sharpe was heartily applauded as he retired, and Mr. Hammond then proceeded with the business of the convention. He expressed his regret at the absence of President Ross and paid a high tribute to the good work which he had done for the association in all parts of Canada. He had known Mr. Ross for years and had in fact been brought up in the business under him. Consequently he knew his sterling worth and ability and regretted his absence all the more. Secretary Kirkham of the local association was also absent because of illness, and he would be much missed by his fellow members.

C. E. Gate, of the local association, then welcomed the visiting delegates on behalf of the local association. "It affords me particular pleasure," said he, "to welcome the visiting delegates and supply men to this city. For twelve months we have looked forward to this convention and now that you are here the city is yours and you are welcome to all that is in it. I am sure that you will find much in Winnipeg to admire and enjoy. A quarter of a century ago, when one or two of you visited Winnipeg before, this city was only a mud hole. There were no plumbers and no sanitary conveniences; we were satisfied with a bath every Queen's Birthday. At the present time the majority of Winnipeg houses have up-to-date plumbing installed. Mayor Sharpe is making plumbing compulsory in every house and he is doing grand work; he is one of our best contractors and he may yet be a plumber."

In concluding his remarks, Mr. Gate regretted that the stay of the delegates was too short to allow them to follow Mayor Sharpe's suggestion of an excursion through the western wheat fields.

On behalf of the visiting delegates, Robert W. Harrison, of Toronto, re-

sponded to this address of welcome. He was very glad that Winnipeg was the convention city. The proposal a year ago to meet in Winnipeg had been enthusiastically received because the association members in the east had heard so much of Manitoba's capital city and the marvellous progress which it was making. But in spite of all he had heard of Winnipeg, he must confess to some surprise at the thriving city which he had found upon his arrival here. He reminded the delegates that the Winnipeg Association were handicapped by the illness of Secretary Kirkham and of President Ross. He hoped that all would unite to make their work easy.

President A. J. Hammond, Winnipeg.

Stephen Mellon, Hamilton; Harry Mahoney, Guelph, and J. Watson, of Montreal, were then appointed to act as credential committee and the convention adjourned to meet on Wednesday morning.

SECOND SESSION.

Tuesday afternoon was spent in pursuit of pleasure, the delegates being driven around the city in carriages. In the evening the visiting plumbers made merry at the Queen's Hotel where they were entertained by the visiting and city supply men, who distributed various souvenirs of the occasion.

The second business session was held on Wednesday morning, Vice-President Hammond presiding. The credential committee reported that the delegates whose names were given above were accredited delegates to the convention.

The following committee on resolutions was then appointed: Wm. Mansell, Alex. Cameron, R. L. Beattie, Walter Ryan, J. J. Coughlin.

On behalf of President Ross, Wm. Mansell expressed to the convention that officer's regrets at his inability to attend. About three weeks ago he was suddenly taken ill, and his doctor advised him to take six months' rest. Mr. Ross rebelled against this advice because of his anxiety to attend the convention and he consulted two specialists, who told him it might cost him his life to go to Winnipeg just now. Since Mr. Ross could not be present himself, it devolved upon Mr. Mansell to read the

President's Report.

To the National Association of Master Plumbers,, Steam, Gas and Hot Water Fitters of Canada:—

In presenting a report for the year that has gone since you elected me to fill the position of presiding officer of this national association, I but follow in the footsteps of my predecessors when I place before you a resume of the year's work, and this I will do in as concise a form as the nature of my report will allow.

At the outset, allow me to call your attention to my election to the position you entrusted to my care; you will remember that when the National Convention was in session last year, I was some thousands of miles away, and it was not for some time afterwards that I was made aware of the fact that you did me the honor of electing me as your president. While I can assure you that I fully appreciate your confidence and esteem, I could have wished that another had been your choice. When a man who takes an active interest in the conduct of his own business is absent as long as I was from mine, it naturally follows that on a return to duties one finds that it takes some time to take up the thread again; add to this the duties the position of president of the association involves, and you can readily see it would take some time before one could grasp the situation. However, as you have done me the honor to repose in me your confidence, I assumed the duties and have done the best I could.

In looking over the report of the last convention, I found that you had conferred upon me a further honor of electing me your representative to the National Association of Master Plumbers of the United States to be held in the city of St. Louis in September last, with instructions to the incoming executive to provide ways and means for carrying this into effect; and just here I may say that, following the usual custom, I requested the gentlemen who composed the sub-executive of the Ontario Provincial Association, together with Mr. Harry Mahoney, of Guelph, the National vice-president for Ontario to act as the National sub-executive. This committee was called together when the matter of representation at St. Louis was discussed, and it was decided to place the matter before the board of the Toronto Association with a request that that association consider the appointment of additional delegates to accompany the delegate you had already elected. This matter was taken up by the board of that association with the result that they recommended to their association that three delegates be appointed. This recommendation was adopted and the following gentlemen were selected, viz.: Mr. Fred. Armstrong, chairman of the board; Mr. R. W. Harrison, member of the board; and Mr. W. H. Meredith, secretary of the Toronto and Ontario Associations and a past president of the National Association. In accordance with the resolution passed at the last annual session, these gentlemen accompanied me as accredited delegates of this association.

Delegates to St. Louis.

The party left Toronto on Friday evening, September 2, arriving in St. Louis on the following afternoon, and, as previously arranged, registered at the Hotel Hamilton, the headquarters for the delegates. After looking over the ground, your delegates decided to get in touch with the board of directors of their National Association and talk over the situation with them and if possible have the board present our case in their report to the convention. An interview was readily accorded us and we were extended a hearty welcome. A general discussion took place just as to what was best to be done to bring the question before the convention, and we were finally asked to put our case in a concrete form and they would make it part of their report.

I can assure you that this was no easy task for your representatives to perform, realizing as they did that we were appearing before the older and stronger body, and it was quite natural to suppose that we would ask for more than we could give. However, after due con-

sideration, we drafted the following and laid it before them:

"That all members of the National Association of Master Plumbers of the United States who are invited from the city of Toronto to figure on work within said city shall first communicate with the secretary of the Toronto Association, it being thoroughly understood in doing so they shall not in any way invalidate their opportunity of securing the work for which they are tendering."

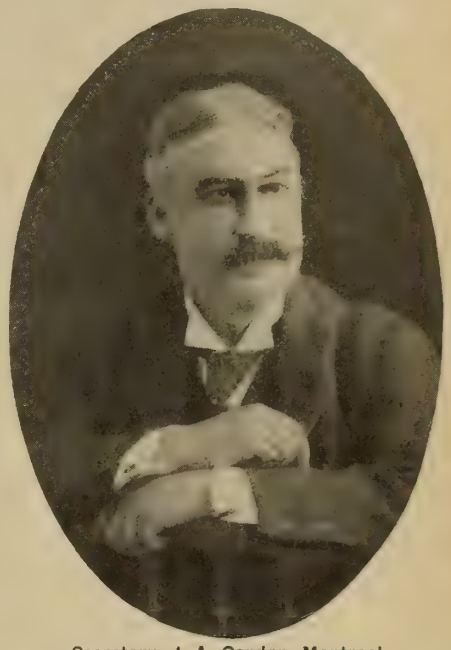
Just on the face of it, these resolutions would appear to deal with the city of Toronto only. The explanation of this is that one of the conditions was that we had to assure them that we were in a position to speak with authority. This we had from the Toronto Association, but, according to the resolution passed last year by this association, we were asked to report back to this convention the result of our mission and that our delegates would attend the convention in a fraternal capacity. However, it was understood that so soon as our National Association was in a position to discuss the question as was the Toronto Association, then they were prepared to take the matter up in the broader sense.

It was expected that our National Association would have met and discussed this question before their National met again, but, unfortunately, such was not to be, as their convention this year was held at the usual time, early in June, and this not only debarred us from reporting to this body, but also prevented us from taking the matter up of sending delegates to their convention in the city of Atlanta, Georgia, which was held June 6, 7, and 8.

We are pleased to report to you that the board of directors not only made our request a part of their report, but they also made a recommendation that "our friends from the sister association of Canada be made delegates with full powers save voting. This recommendation was unanimously concurred in by the convention and your delegates were then given an opportunity to address the convention, numbering some six hundred or more, from all over the Union, also a large number of visiting master plumbers and ladies who accompanied the delagates. The reception accorded us was of the heartiest nature, and I believe that a bond of union was created that will eventually cement the two associations together in a more friendly way.

Ontario Vice-Pres. R. W. Harrison, Toronto.

THE AMERICAN CONVENTION.



While we are on this subject, I will here include the action by the sub-executive in regard to the convention of the United States National for this year. When I found that the convention of this association would not meet until after the meeting of their association convention, I laid the matter before the members of the sub-executive, who took the matter up with the delegates of the Ontario provincial association, who were in annual session in the city of Guelph on April 21st and 22nd, with the result that that association took the matter up on behalf of this association and elected Mr. Fred Armstrong, of Toronto, and Mr. W. J. Walsh, of Hamilton, the president of the Ontario association, to attend on behalf of this national association. A further request was made to the Toronto association to elect one or more representative to accompany the two selected by the Provincial, and this was subsequently taken up by Toronto and W. H. Meredith was appointed.

These gentlemen attended the convention in the city of Atlanta, Ga., and were accorded a very warm reception, and again clothed with full power of delegates save in voting. An opportunity was accorded them not only to appear before the board, but also before the convention. Unfortunately they were unable to convey the opinion of this association, but did suggest that our association would favorably consider any proposition that the larger body might have to offer that would tend to a closer union of the two bodies. An initial move was made with this in view and a motion was passed that the incoming executive of their association take the matter into their consideration, with a view of having a committee of two appointed from each association to discuss matters of mutual interest, more especially just at present with the apprentice question prominently to the front. There is a strong probability that such a committee will be appointed in the near future, and it would be well for this convention to discuss the best disposition of such a communication when received.

It was also thought advisable to get in touch with the Master Steam Fitters of the United States, who operate as an entirely separate body. With this end in view the sub-executive, in conjunction with the Ontario association, appointed John McKinley, of Ottawa, and B. Noble, of London, to attend the convention of that association to be held in Atlantic City, N.J., on June 13, 14 and 15. In this case a request was also made of the Toronto association to consider the appointment of further delegates. This was taken up by that association with the result that R. W. Harrison was appointed. When the time for holding the convention of that association arrived it was found by Mr. McKinley that it would not be convenient for him to attend, and Messrs. Noble and Harrison were the only ones in attendance. These gentlemen were the recipients of a very warm reception, and were accorded all the privileges of delegates except voting. Their work was necessarily more of a missionary nature and they were successful in having the question referred to the incoming executive, who have promised to give the matter their early attention. Representatives would have been sent from these associations to this convention but for the great distance and the time the convention is held.

Progress in Canada.

As to our own association, I may say that the year has been one of marked success. In the Province of Ontario special efforts were put forth along organization lines, and a great increase made to our membership. This association issued a monthly directory containing the names of their membership, also the names of the manufacturers in accord. This has been found a source of strength to that association.

Secretary, J. A. Gordon, Montreal.

Since our last convention British Columbia has organized a Provincial association. I am not in possession of sufficient facts to place the information before you, but trust that we will be favored with representatives from that Province who will give full information. There has been also a strong association organized in the city of Calgary, and, altogether, this year has been one of encouragement and promise.

I very much regret that ill health during the year prevented my keeping in close touch with the various associations, and for the same reason I find at the last moment that I will be unable to meet you in the city of Winnipeg. This is a sore disappointment to me, for I was looking forward with a pleasurable interest to meeting my confreres in Winnipeg. However, my absence is no indication of a lack of interest on my behalf, or of weakness of the association. I cannot allow the opportunity to pass without thanking the secretary of the Toronto and Ontario associations for the assistance he has given me during the year. While his time is fully occupied, he was ever ready to do what he could, and through him I have been kept in touch with the associations.

In the matter of the publication of the annual reports, this was left in the hands of the incoming executive to take up. This was done, and Mr. Meredith was asked to take the matter up, which was subsequently done. A copy of the

report was mailed to each known address of the craft throughout the Dominion, and a very substantial balance was added to the treasury of this association.

I could prolong this report, but I fear I will weary you should I take up any more of your time, and I will close with expressing the hope that the convention will be both a pleasant and profitable one, and that the prosperity enjoyed by our fair Dominion will be enjoyed by the membership of this association. This, I may say, gentlemen, is almost entirely in our own hands. What we want is to exercise common judgment and establish and maintain a spirit of confidence one in the other.

We look back with considerable pride and satisfaction to the good accomplished by our association since its inception. We have brought our craft to a higher plane and have established a higher standard of work; the men of our craft are filling the positions they are capable of occupying and are commanding greater respect than they ever did.

In conclusion, allow me to say that while I am not with you in the body, my thoughts will be of you, and I again express the hope that the tenth annual convention will be known as the most harmonious and successful convention ever held.

All of which is respectfully submitted.

Very truly,

ROBERT ROSS,
President.

Toronto, August 3rd, 1905.

Vice-President's Report.

The next report read was that of Vice-President Hammond, of Winnipeg. The report was as follows:

To the President and Members, etc.:

My position as national vice-president extending all over Canada has been reviewed by me at a distance. I can assure you it was pleasing to me to read some of the good work done, especially by our Canadian delegation to the St. Louis convention. I am sure the experience our friends across the line must have had must have been quite visible to our delegates, so that we can expect some good recommendations at our tenth annual convention that will help our younger organization by the experience of the older. This interchange of lists is a good thing in itself, and is a move in the right direction, if we take the interest we should by sending new lists every month. The aims and objects of the two associations are one and the same, therefore the closer we keep in touch with one another the result must be a better understanding, also beneficial to our organization.

We still find in the last year Ontario far ahead of Provincial associations in organization, and it has spread itself from one end of Ontario to the other, and it should be very encouraging to the members to know it has been the most successful year in the history of their associations, with so large an increase in membership as is shown by the report of the secretary. I am sorry that Winnipeg has not the cities around her in Manitoba to have local associations the same as Ontario, for I believe with one to outdo the other close together has much to do for strong organizations.

I am glad to report that British Columbia has her Provincial association, which is very encouraging when we find that only a year ago we did not even have a delegate from the Far West, but we will no doubt find them with us in 1906. Now that British Columbia has fallen in line, why not Quebec, Nova Scotia, Manitoba, with their older associations, help build up the national association as we should better than we knew. In closing I might say that the work of the local association has been very trying. I have done my best for all association matters, and shall try to do so in future for the benefit of the trade in general.

A. J. HAMMOND.

Secretary's Report.

Secretary J. A. Gordon, of Montreal, then submitted his report, which was as follows:

To the President and Members of the National Association of Master Plumbers:

Gentlemen,—When I had the honor to be elected secretary of the national association at the convention in Toronto, I felt that I had a very responsible and onerous position to fill, but I must say that the prompt and courteous replies which I have received to most of my correspondence has made my position more a pleasure than a duty.

I am still of the opinion that the secretary should be appointed from the same city as the president, which would save considerable delay in corresponding with and replying to questions from local associations, but real efficiency can only be obtained by the appointment of a permanent secretary.

As no record of the correspondence of former years appears to have been kept in a form which would be at all serviceable to the new officer, it was impossible for me to continue the work so ably carried on by my predecessors, but I have at least answered to the best of my ability every communication received, and trust that my efforts to spur on the local associations have not been without some result.

JOHN A. GORDON.

Nova Scotia Vice-President.

The report of James Farquhar, vice-president for Nova Scotia, was read by Secretary Gordon. The report was as follows:

As Provincial vice-president of Nova Scotia I regret I am unable to report any great work accomplished. I fully intended during the year to visit a number of our towns and try and interest our brother plumbers, but up to the present I have been unable to do so. Business this year has not been up to the average, due, it is claimed, to the very severe Winter, which completely paralyzed our lumbering, fishing and mining industries, which are the backbone of our Province. In conclusion, let us hope that next year will greatly improve all conditions.

JAMES FARQUHAR.

Quebec Vice-President.

The following report of the Quebec vice-president was submitted to the convention:

In presenting to you the tenth annual report of the Province of Quebec, would say business generally is very good, and prospects for the future are bright.

The past year has been an eventful one for the Master Plumbers' Association, of Montreal, beginning with a strike of the plumbers and steam fitters, which lasted four months from May 1 to September 1, the master plumbers holding out for the open shop, with the result that all shops are open in the city of Montreal.

Early in the year an association called the Master Plumbers' Club was formed, most of the members being members of the Master Plumbers' Association, and the work of same is carried on in a similar way to associations in other cities details of which may be had from our delegates if of interest to the convention. Our association has had several meetings with the wholesale trade, and in the near future we are looking forward to a satisfactory arrangement with them as to prices, etc.

The Quebec City Association, I understand, will be reorganized at an early date, also an association is to be formed at St. Hyacinthe. The thanks of the association are due to Messrs. Mansell and Meredith, of Toronto, for their good advice given to us when here last April, and I take the opportunity of extending thanks to them on behalf of the Montreal association. Before the close of this year we expect to amalgamate the two organizations now in Montreal.

I regret that the force of circumstances will not allow me to be with you in convention this year. Kindly convey greetings and best wishes to the members.

W. R. J. HUGHES.

Ontario Vice-President.

Vice-President Mahoney being too modest to read the report for the Province of Ontario it was presented to the association by R. W. Harrison, of Toronto. The report, which was very encouraging, was as follows:

As Provincial Vice-president for Ontario, I beg leave to submit my report. Having been re-elected vice-president for Ontario, I felt that I must try and do the work allotted to me to the best of my ability. Ontario to-day has one of the strongest associations on the continent, and is without doubt the backbone of the National. Our membership the past year has increased wonderfully, nearly all the cities and towns having local branches, and now the villages are awakening to the necessity of an association. The organization committee are to be commended for the good work they have performed during the past year. The past president, Mr. Mansell, was, and is to-day, a tower of strength to the order, and to his untiring energy and executive ability we owe much.

The secretary, W. H. Meredith, needs no introduction; his motto is honesty, integrity and unity; these combined can never fail.

Our president, W. J. Walsh, of Hamil-

Limited.
HAMILTON, ONT.

ton, will show to the members that he can and will fill the president's chair with credit to himself and that the association will grow under his guiding hand.

My successor will have an easy office to fill, and will find, as I have, that all the work is so arranged that the vice-president has practically nothing to do.

We held our annual convention in Guelph on April 21 last, and had one hundred delegates present, all appearing to enjoy themselves. The keen interest shown while in convention predicts for Ontario a bright future in the plumbing trade.

HARRY MAHONEY.

Manitoba Vice-President.

The following report of the state of the work in Manitoba was presented by the Manitoba vice-president :

In acknowledging the honor conferred upon me at the last annual meeting in appointing me your Provincial vice-president for Manitoba, I regret that the year's work has not led to more satisfactory results as far as the association is concerned.

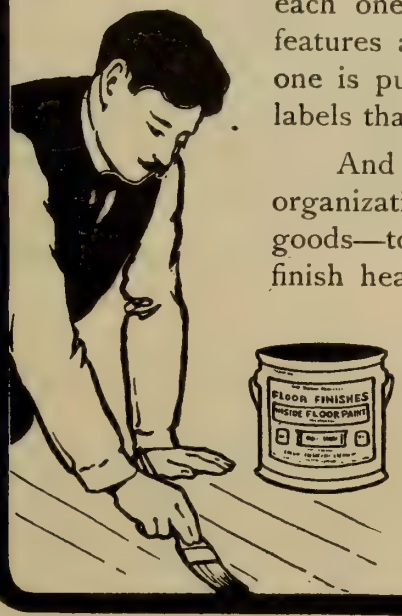
In my travels to the western portion of the Province and the Northwest Territories, I found the same busy times existing there that we are experiencing here, and where a year ago the trade was not represented in many of the towns I visited. I found on a later visit that from 3 to 6 shops were opened up and doing business at these towns, and the need of an association among these shops was very evident to me, but I was unable to persuade those interested to take steps and organize. It is very hard for a Provincial vice-president to give the attention to the extensive work that is required, as the amount provided for this purpose does not go very far in this western country, where the towns are so scattered, and it will be necessary, if the association desires to extend its work, to increase the appropriation so that whoever may be appointed to the position will be able to give some attention to the outlying districts, where the organization will be beneficial to the trade and the association.

An association has been formed at Calgary, of which W. Head, of that city, has the honor of being the first president. Mr. Head communicated with me as to organization, but at that time I was away from home and was unable to attend to it, but when I returned home I learned that Mr. Head had been east and was fully advised by the secretary of the National Association, and I decided that, as I did not know on what lines the advice had been given, it would be better to let the matter stand, and I took no further action.

With the remaining members of the local trade I am glad to welcome our eastern friends to Winnipeg, the most progressive city in Canada. Many of you are visiting Winnipeg for the first time, and will see for yourselves that we have in the west a city which is all it is represented to be, and should you have time to take a trip further west I have no doubt that you will admit that we are right when we claim to have in Winnipeg the natural capital of Canada, both by her position and the vast country on every side she is called upon to serve.

Again thanking you for the honor conferred, I would urge upon the association the necessity of making ample provision for the extension of the organization work in the west, and make it possible for sufficient time being allowed for a person to stay and complete organization work in any town where it would be considered necessary and beneficial to that trade and the association.

J. W. MOULD.



Are You Getting Biggest Share of Floor Finish Trade?

How About Your Stock of Floor Finishes?

With *THE SHERWIN-WILLIAMS FLOOR FINISHES* you can control it. The line includes finishes for all kinds of floors.

Each one is expressly made for its purpose —as good as can be made. Each one gives the best possible wear. Each one is strongly advertised in our extensive general advertising and each one carries with it strong display features and special advertising. Each one is put up attractively under uniform labels that advertise the whole line.

And back of each one is a selling organization that is bound to sell the goods—to make your store the floor finish headquarters in your territory.

Northwest Territories.

The following report of the state of organization in the Territories was submitted by E. J. Young, of Calgary :

I beg leave to report that after several years of discussion in Calgary we formed an association of master plumbers, with five members, about one year ago. Since then we have added two new members. Our association is now working harmoniously to the benefit of all concerned. The city of Edmonton have affiliated with the Calgary association during the past year, and are, we believe, working very harmoniously.

E. J. YOUNG.

On motion of Wm. Mansell, of Toronto, and G. C. Denman, of Montreal, all the above reports were referred to the resolutions committee for their con-

Select Committee.

The following members were then appointed to the select committee : K. J. Allison, Toronto; J. Watson, Montreal; G. C. Denman, Montreal; Thos. Stewart, Winnipeg; Stephen Mellon, Hamilton.

R. W. Harrison, Toronto, then gave formal notice that at the next annual convention he will move that Provinces having their own local associations be given the power to elect their own vice-president. Of course for Provinces not yet organized the National Association would retain the right to appoint vice-presidents. This notice of motion precipitated a long discussion by R. W. Harrison, the mover, Toronto; Harry Mahoney, Guelph; Hugh Wallace, Hamilton; C. E. Gate, Winnipeg; J. Watson, Montreal, and F. G. Johnson, Ottawa. Most of the speakers seemed to favor the principle of the motion.

The convention then adjourned.

THIRD SESSION.

At the Wednesday afternoon session the recommendations of the resolutions committee respecting the president's report were submitted, and considered clause by clause. As finally adopted by the convention, this report was as follows :

1. That this association send two delegates to wait on the National Association of Master Plumbers and the

National Association of Steam Fitters of the United States, which bodies meet in the same town at about the same time with instructions to take up the matter of American firms figuring on Canadian work, and vice versa, the idea being to prevent this occurring without notice being previously given to the secretary of the association in the vicinity where work is to be done. Any Province desiring to send additional delegates to accompany the National representation may do so at their own expense. These delegates are to act in accordance with instructions given by the incoming executive.

2. That we consider it advisable that supply houses from the United States doing business in the Dominion of Canada shall first ascertain from the secretary of local associations the names of those who are recognized members of their local associations.

3. That the dates of the next Canadian convention be arranged to take place about one month after the American convention, so as to avoid the loss of time that has occurred the past year.

4. That in order to comply with the move made by the American association in appointing two of a committee to meet two of the Canadian committee, to discuss matters of mutual interest, we appoint the same two delegates that are to attend the American convention to constitute the Canadian committee, and to have power to act.

5. That the National association at the present meeting consider the advisability of making some arrangement with the local and Provincial associations in respect to issuing a Dominion directory containing the names of the members of the National association, also a list of the manufacturers and jobbers in accord. We recommend that these lists be prepared and issued by the sub-executive.

6. In the matter of publishing the annual report we recommend that this be left in the hands of the incoming executive, as was done last year, also that the necessary number required for circulation among our French members be printed in the French language.

Bulk Contractors.

R. W. Harrison, Toronto, submitted an important resolution to the effect that the association place itself on record as opposed to submitting tenders to bulk contractors. Speaking to his resolution Mr. Harrison said that the evil to which he referred exists in all parts of Canada. There are many men calling themselves bulk contractors who have no money. They sub-let their contracts and live on the sub-contractors. They are mere "grafters" trading on the capital of the sub-contractors, and it is time the evil was checked. This was one of the burning questions at the conventions in St. Louis and Atlantic City.

Secretary Gordon remarked that in Montreal this question is under discussion by the local association.

C. E. Gate, Winnipeg, said that the bulk contractor is one of the greatest evils in Winnipeg. "The bulk contractor has more gall here than in Toronto," he remarked. "They actually dare to ask us to tender to them for ten per cent. less than to the propcietors. I well remember when the first master plumbers' association was formed in this city 25 years ago, and it was for the purpose of dealing with this very evil. Most of you will bear me out in saying that our greatest losses are from the bulk contractors, who are worth nothing and have no property."

R. W. Harrison added to his previous remarks that in every town the plumbers would have the support of the architects in opposing the bulk contractors. He hoped that members would refuse to submit tenders to any but architects and owners.

The resolution carried.

The following gentlemen were appointed to the nominating committee to nominate officers for the ensuing year: E. D. Higginbottom, Fort William; H. Mahoney, Guelph; F. G. Johnson, Ottawa; C. E. Gate, Winnipeg, and J. Watson, Montreal.

There was a keen contest for the honor of having the next convention—Ottawa, Victoria, Guelph and Fort William being named. The vote was by ballot, and Ottawa was found to be the choice.

CONCLUDING SESSION.

Thursday morning saw the final business session, and it was almost 2 p.m. before the meeting was closed.

Election of Officers.

The nominating committee then presented their report and the election of officers was proceeded with. The result of the election was as follows:

President—A. J. Hammond, Winnipeg.

Vice-President—F. G. Johnson, Ottawa.

Secretary—Jno. A. Gordon, Montreal.

Treasurer—Harry Mahoney, Guelph.

Nova Scotia Vice-President — William Wooten, Halifax.

New Brunswick Vice-President — D. Shea.

Quebec Vice-President—J. A. Marier, Montreal.

Ontario Vice-President—R. Harrison, Toronto.

Manitoba Vice-President—Fred Litster, Winnipeg.

Alberta and Saskatchewan Vice-President—E. J. Young, Calgary.

British Columbia Vice-President — J. J. Coughlin, Victoria.

Chairmen of standing committees:

Committee on Legislation—Hugh Wallace, Hamilton.

Apprenticeship Committee—J. Watson, Montreal.

Sanitary Committee—C. Grover, Winnipeg.

Essay Committee—C. E. Gate, Winnipeg.

The president and vice-president were appointed delegates to the Unites States conventions.

A resolution was passed expressing the regret of the association at the unavoidable absence of Mr. Ross, and expressing the hope that he may soon be restored to health. This resolution, moved by William Mansell, Toronto, and seconded by H. Mahoney, Guelph, was carried unanimously.

Votes of thanks were passed to the retiring officers, the Winnipeg association, and to the trade press. On behalf of the trade press, F. R. Munro responded for Hardware and Metal, and W. Wood for the Plumbers' Trade Journal of New York.

The convention was then brought to a close by singing "Auld Lang Syne."

BUILDING AND CONSTRUCTION

NEW BUILDING MATERIAL.

THE sole inventor of a process of crystallizing a product of stone, gravel, clay and cement, visited Toronto, Toronto Junction and Mimico last week, and procured samples of shale rock, sand and other materials, with which he returned to Buffalo, where the company of which he is managing director is putting up a plant. They propose to establish a Canadian plant, where all the necessary machinery, moulds, chemicals, tints, etc., may be manufactured and shipped to local plants to be erected throughout Canada. Both the buildings of the parent plant and the local factory will be constructed of their own material. The United States company erect a number of dwelling houses of different design and construction in the neighborhood of their plants, and these are sold to their employes on easy terms. The material possesses the advantages of being cheap, durable and handsome, and its manufacture in Canada should tend to lower the cost of workingmen's homes.

NOVELTY IN LAYING CONCRETE.

A RATHER novel method of laying concrete has recently been adopted by J. F. Lyman, of Modesto, Cal., in the construction of a concrete wall, according to the Stone Trades Journal. Between the framing forming the outer and inner faces of the wall collapsible hollow cylinders somewhat less in diameter than the thickness of the wall were placed vertically at intervals, the cylinders having previously been perforated with several holes. The object of this was to drain the water from the fresh concrete as the latter was placed round the cylinders. The concrete having been filled in round the cylinders, it was allowed to set during the night, and the water which had collected in the cylinders was then pumped out and the cylinders were withdrawn, the space which they occupied being filled with concrete. It is stated that the hollow cylinders contained from 2 in. to 6 in. of clear water at the end of from ten to twelve hours, the water having drained from the concrete. The object in providing this extra drainage was to procure a more uniform set throughout the mass of the concrete. It is also stated that concrete laid by this method is usually free from cracks and very uniform in strength.

HARDWARE FIRM BUILDING.

The Trees, Spriggs Co., importers and manufacturers of saddlery, hardware, leather goods, fur robes and coats, Winnipeg, have started work on a five-storey brick warehouse on Ross street. The building will be 45 feet wide by 110 feet deep, and the estimated cost is between $30,000 and $40,000.

The business of the firm has grown to such proportions, although it has only been established five years, that the new building was an absolute necessity. Work on the building will be rushed, as the firm expects to be settled in its new quarters by Sept. 1.

PEDLAR PEOPLE ENLARGING.

The Pedlar People, Oshawa, have of late been adding considerably to their already extensive plant, with the result that their manufactory now occupies a complete block of territory. The latest machinery is being installed in the new additions, conspicuous among which is a special scale-removing machine, to be used in connection with metal lath.

TORONTO'S BUILDING BOOM.

The building statistics for the first seven months of this year in Toronto, as compared with the same period last year, show as follows :

	1904.	1905.
Value ... ...$	3,470,433	$5,651,624
Value for July	844,550	1,157,298

BUILDING NOTES.

The St. John Globe is to build a five-storey office building.

Frost & Wood are to erect a large warehouse at Edmonton.

The Bank of Commerce will erect a bank building at Pincher Creek.

A $50,000 elevator is to be built by T. Bullock & Son, Crystal City, Man.

A. M. McKenzie, Hamilton, has secured a permit for a $2,000 residence.

Mr. Sam'l Bennett has the contract of building the new school house at Wroxeter.

R. Fuller has secured a permit to erect a $1,675 house on Hawarden avenue, Brantford.

Samuel Champion, Vancouver, is to build a row of stores on Westminster avenue in that city.

Loo Gee Wing, a wealthy Vancouver Chinaman, has contracted for a large hotel and theatre building.

The Canada Steel Goods Co. has taken out a permit to erect a $5,000 cement and frame factory in Hamilton.

A. E. Blow, Fort Frances, has been awarded the contract for building the new Presbyterian Church manse, to cost $1,350.

Concrete building blocks are being manufactured at Fort Frances, and a building is being erected of them for H. Williams.

H. J. Franklin, stationer, Vancouver, has secured a permit for an $8,000 brick and stone building, part of which will be occupied by his own business.

Elm Creek, Man., reports a building boom. Among the new structures are a brick school, $12,000; Anglican Church, $1,500; and several new dwellings, a total of $35,000.

Mr. C. E. Benell, of Brandon, has secured the work of erecting a 50,000 bushel elevator at Griswold, and is preparing the plans at his office. The elevator is for the Griswold Milling Co.

Amongst those building residences at Sudbury are Messrs. S. E. Wright, James McCool, S. Muirhead, J. A.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE Canadian Fairbanks Co., Limited, Montreal, have been awarded the contract for the power transmission appliances, including Fairbanks' wood split pulleys and universal giant hangers for the new factory of the Gananoque Bolt and Nut Works.

The new chair factory in Listowel, Ont., is now running.

The E. & N. Railway may be extended north from Nanaimo to Cumberland, N.B.

The new tannery in New Westminster is now completed, and practically all the machinery installed.

John Hanbury, who owns sash and door factories at Brandon, Man., has just commenced the erection of a sawmill at Elko, B.C.

The town of Whitby has voted a bonus to D. L. Holden, windmill and power pump manufacturer, Michigan, and he is now preparing to establish his plant in Whitby.

The town of Port Hope is considering the proposition of installing a municipal lighting plant for street lighting purposes. Electricity will be generated by water power.

The large lumber and shingle mill of Small & Bucklin, New Westminster, B. C., is going up quickly. It is claimed that this will contain one of the finest planing and saw-mill equipments on the Pacific coast.

In consequence of enquiries received from the United States by the Goold, Shapely & Muir Co., Brantford, Ont., for their new continuous concrete mixer, a company has been formed in Buffalo with a capital of $75,000, to make the mixer on the American side.

W. N. Danley, owner of the Shawville (Que.) Mrble Works, thinks that there is sufficient excellent granite and marble in the district of Shawville to warrant an important quarrying industry being established there. All that is necessary is the capital.

The double tracking of the I. C. R. necessitates the building of a new bridge over the Sackville River at Bedford, N.B., and construction is now well under way. The construction is being done by F. A. Rounan & Co., St. John, and the steel part by the Dominion Bridge Works.

The Allis-Chalmers-Bullock, Co., Limited, Montreal, have been awarded the contract for the electrical and hydraulic machinery for the city of Nelson power plant on the Kootenay River, B.C. The amount of the tender for the electrical machinery was $29,985, and $13,600 for the hydraulic.

The new plant of the Dominion Iron & Steel Co., Wabana, Belle Isle, Nfld., has been completel. The output at Wabana for the month of July was the largest in the history of those mines, 75,000 tons of ore being mined and shipped for the month. This amount can now be doubled.

The Canada Foundry Co., Limited, has recently closed a contract with the Western Fuel Co., of Nanaimo, for two seventy-two inch diameter by eighteen feet long a hundred and fifty horsepower horizontal tubular boilers, working pressure a hundred and twenty-five pounds per square inch.

The town of Galt has at last agreed to permit the Grand Valley Railway Co. to lay rails on the streets of the town and thus to connect with the G.H. &. P. Railway. Up to the present time the Grand Valley have been running their cars to the corporation limits, and connecting with the G. H. & P. by 'bus.

Alexander Maclean, Canadian trade agent in Japan, writes to the Government that there will probably be a falling off of imports into Japan during the second half of the year. The foreign trade returns for the first half year show that the exports amounted to $71,369,999 and the imports were just twice as much. Such an enormous excess of imports over exports during a half year is unprecedented. The purchase of war supplies is largely responsible for this condition of affairs.

Companies Incorporated.

The Windsor & Cobalt Mining Co., Limited, have been incorporated with a share capital of $150,000.

The Wallaceburg Brass & Iron Mfg. Co., Limited, has been incorporated with a share capital of $40,000.

The Power & Gas Machine Co., Limited, of Galt, have been incorporated with a share capital of $100,000, purpose manufacturing gas, steam and air engines and incidental machinery, etc.

The D. M. Stewart Manufacturing Co., of Canada, Limited, has been incorporated with a capital of $40,000, for the purpose of manufacturing gas burners, electrical insulators, etc. The directors are C. S. Steward, Chattanooga, Tenn.; W. H. Frazier, S. L. Ezell, A. J. Thomson and S. Johnson, all of Toronto.

The Coleman & Bucke Consolidated Cobalt-Silver Mining Co., Limited, Ottawa, have been incorporated with a share capital of $1,000,000, for the purpose of exploiting cobalt deposits in the Temiskaming mining division. It will carry on, in all its branches, the operations of a mining, milling, reduction and development company. The directors are W. H. Powell, J. McIsaac, Jr. J. Heney, F. R. Latchford, and A. A. Antoine, of Ottawa.

Radiation and Decoration.

UNDER the above caption the American Radiator Co., of Chicago and Brantford, have issued one of the handsomest books on decorative art in radiation that has ever been seen in the office of Hardware and Metal. The centrepiece is a colored reproduction of the handsome and complete exhibit made by the company at the St. Louis Exposition, but in addition to this the fifty odd pages include a large number of handsome engravings in colors of radiators enclosed under windows or cosy corners. The reading matter is also especially interesting. Another valuable book sent out by the company describes and illustrates the Vento cast iron hot blast heater. The books will be appreciated by every steamfitter and heating contractor. Hardware and Metal shrould be mentioned by any who send for copies.

Fan Motors.

Munderloh & Co., dealers in electrical supplies, Montreal, are presenting their customers with a neat little booklet describing the comforts of alternating current fan motors. The feature is the fine half-tones, illustrating electric fans in business offices, music rooms, club dining rooms and bowling alleys. The booklet will be sent on application.

Boiler and Heater Cleaners.

Catalogue No. 6 issued by the Freeport Plumbing & Heating Co., Freeport, Ill., describes Dehn's patent automatic feed water back, a device to overcome the accumulation of lime, magnesia and incrusting minerals in water fronts, heaters, furnaces, boilers, etc. The booklet is a small 40 page affair, but its worth cannot be judged by its size, as it's well worth sending for. Do not forget to mention Hardware and Metal.

"Our New Home."

Canadian Fairbanks Co., Limited, draw attention to their recent move into larger quarters, by a large card hanger showing the new building and touching upon the wonderful development of "Canada's Leading Machinery and Supply House" in short paragraph form. If you haven't one of the cards send for a sample and mention this paper.

Small Springs.

A most artistic booklet, giving valuable data on small springs, was issued on July 15 by the Wallace Barnes Co., of Bristol, Conn. The cover, embossed in blue, on a light brown ground, is a feature. The booklet contains thirty-six pages of reading matter, is beautifully printed in two colors, and is copiously illustrated by half-tone cuts of the goods manufactured by the firm. The Wallace Barnes Co. have been in business since 1857. Everyone interested in small springs, wire and cold-rolled steel, should have one of these catalogues, which will be sent to any address on mentioning Hardware and Metal.

No. 17. OSHAWA, ONT. AUGUST 19, 1905

LATH

MR. HARDWAREMAN, if you could spend a few hours at any of our branches:—Montreal, Toronto, Ottawa or Winnipeg, and see for yourself waggon after waggon back up for 5 bundles, 10, 15, 20, 25 and more bundles, of Perfect Metal Lath, you would then realize that "Pedlar Talks" are not in vain.

SALES

If you can recall our previous "Pedlar Talks" you will readily notice that we have never referred to any so-called fire-proof lath manufactured by anybody. Why?

Because we don't have to "knock" anybody's goods to sell our own. An instant **comparison** sells **Pedlar's Perfect Expanded Steel Lath** at sight.

OPPORTUNITY

We have sold more lath in the last 8 months than has been previously sold in Canada in 8 years. We make our lath to **sell** not to look at.

Hundreds of middlemen have realized handsome profits by handling our product. Ask yourself why **you** have not shared these profits and then write us.

PAINT, OIL AND BRUSH TRADES

THE PREPARATION OF SURFACES.

IN preparing a panel of wood or cardboard for the reception of a painting in oil colors, it is desirable to make the ground agree with the layer which forms the painting in respect to expansion by heat and moisture, otherwise cracks are sure to occur in time. The panel may be painted with boiled linseed oil, which penetrates to a certain depth and is hardened by oxidation to a thin, tough coating, identical with the hardened oil in which the pigments are imbedded. A painting on such a ground may be exposed to great variations of temperature without danger of cracking. The preparation takes time, as the oil must become quite hard before the painting is begun. It is advisable to oil both sides of the panel and the edges, to prevent danger of warping from dampness. The best way to oil panels in quantity is to place them on edge, separated by small blocks af wood, in a tin vessel which is then filled with well-boiled oil, heated gradually from beneath to 110 deg. or at most 120 deg. C. (230 deg. to 248 deg. F.) and allowed to cool. The pores of wood and cardboard are filled with air, and both contain large quantities of water, the moisture in thoroughly air-dried wood amounting to 20 per cent. by weight.

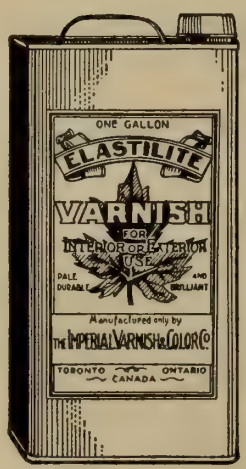
During the heating the air is first driven out, and then the water, which at 120 deg. C. may be assumed to be entirely expelled, and during the slow cooling the external air pressure forces the oil so deeply even into hardwood that panels a quarter or a third of an inch thick are saturated throughout. The panels are taken out and allowed to drain, and the excess of oil is removed with a cloth or brush. They are then kept standing on edge, without touching each other, for several months, in order to harden the oil in the interior as well as on the surface.

Paintings on panels thus prepared are not only uninjured by variations in temperature and humidity, but they may be cleaned by washing and are not attacked by insects, which often ruin unprepared panels.

Metallic grounds are little used by artists, although very small paintings are sometimes executed on plates of copper. Such plates, though strong, durable, and proof against dampness, are peculiarly liable to produce cracks in the paintings executed on them, because they expand or contract so greatly and so quickly with every change of temperature. This defect, however, can be remedied to a great extent by giving the metal a tough, elastic coating, for which purpose linseed oil is again employed. The plate is roughened with a fine file, slightly polished with pumice stone, washed, dried, and immediately painted very thinly with hot oil, which penetrates into all the irregularities and, when hardened, adheres firmly, the adhesion being increased by chemical action of the acids in the oil upon the copper, which thereby assumes a greenish tint. Three coats of oil are given, each of which is allowed to become quite hard before the next is applied.

The painting, therefore, rests on a tough, elastic coating of hardened oil, which protects it from the effect of expansion of the metal.

Sheet-metal signs and the lettered and decorated tin boxes in which smallwares are sold soon become defaced when exposed to changes of temperature, particularly if the colors have been mixed with quick driers, as is generally the case. The process above described is too costly to be applied to most of these articles. A simpler method consists in giving the metal one coat of thoroughly boiled oil, or better drying oil, and grinding the colors in the latter without any special drier. The plates do not dry very rapidly, but this simple process is not only cheaper, but more effective in securing permanence than the use of colors ground in soft resin varnishes, as practised by some manufacturers.



Plaster and stucco are painted in both oil and distemper. The colors sink into the porous wall, and one spot may have to be repainted several times to produce the desired effect. This inconvenience is easily avoided by giving a preliminary coat of size for distemper, or of hot boiled oil for oil painting.

The finished painting should receive a coat of varnish or paraffin. When paraffin is used, however, the wall should be neither sized nor oiled before painting, and the colors should be mixed with a minimum quantity of thin size. When dry they are covered with melted paraffin, hot enough to sink well into the wall before solidifying, a condition which is made known by the instantaneous disappearance of the gloss. Additional coats of paraffin are then applied until a permanent gloss is produced, and the surface is finally polished with a woolen cloth. Such mural paintings are very permanent, as the chemically-inert paraffin protects both the wall and the colors.—Scientific American.

GOOD SUGGESTIONS.

To remove paint, varnish or resin stains from white or colored cotton and woolen goods, use oil of turpentine or benzine, followed by soap-suds. For silk, benzine, ether, soap; hard rubbing is to be avoided.

Cutting the putty from old sashes with a knife and hammer is very apt to damage the woodwork. Instead, give the putty three coats of ordinary paraffin oil, allowing a half hour between coats. The petroleum will penetrate into the pores of the putty and dissolve the hardened linseed oil, making the putty plastic in a short time and in two or three hours it can be readily removed.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 18, 1905.

THE past week has been characterized by quietness in the general paint and oil market. As is usual in Mid-Summer, there is not the same snap to business as in the Spring and Fall, but there is every indication that trade will open up briskly, and the wise and farseeing hardwareman will order liberally for the coming year, in the matter of paints.

The market for paris green collapsed entirely, and much more could have been sold. The merchants who will carry over a stock for 1906 are few and far between.

Varnish is in pretty fair demand, and trade generally may be said to be quiet, but healthy.

Turpentine— As predicted in last week's Hardware and Metal, the price of turpentine has been advanced on the local market, and the demand is strong at the following quotations: Single barrels, 89c. per gallon. Two barrels or over, 88c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—No further drop has occurred, and the prices given last week, are still quoted, as follows: Raw, one to four barrels, 49c.; five to nine barrels, 48c.; boiled, one to four barrels, 52c.; five to nine barrels, 51c. f.o.b. Montreal. Net 30 days.

Ground White Lead—Trade is quiet, at present, but prices are firm. We quote: Best brands Government standards, $5.35 to $5.50: No. 1, $5.10 to $5.25; No. 2, $4.75 to $5.00; No. 3, $4.50 to $4.75, all f.o.b. Montreal.

Dry White Lead—There is little change in market conditions since our last report. Our prices are: Barrels, $5.25; 100-lb. packages, $5.50; six or ten-lb. tins, $6.50.

Dry White Zinc— The market is very firm at last week's figures: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc (ground in oil)—Great activity is still manifest, but there has been no change in prices. We quote: Pure 25-lb. irons 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—The demand is normal, and prices are unchanged. Our quotations are as follows: Pure linseed oil, $1.75 to $1.85; Bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—The market remains steady at the old prices. Our quotations are as follows: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Shellac Varnish—A fair demand has been experienced, during the week. Our prices are as follows: Pure white in barrels $2.30 to $2.50; pure orange, $2 to $2.20; No. 1 orange, $1.90 to $2.10.

Mixed Paints—No advance has occurred as yet, but the trade outlook is excellent. Prices are from $1.20 to $1.40 per gallon.

Castor Oil—No change has transpired, and business continues very strong. Our quotations: 8c. to 9c. in wholesale lots, and 1-2c. additional for small lots.

Litharge—Ground, in casks, 5c.; in less quantities, 5 3-4c.; flake litharge, casks, $5.50; smaller quantities, $6 per 100 lbs.

Refined Petroleum—As Fall approaches, orders are getting larger every day, many dealers taking advantage of the low prices current. An advance may occur at any moment.

ONTARIO.

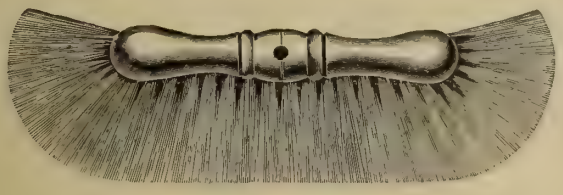
Office of HARDWARE AND METAL,
10 Front Street East,
August 18, 1905.

A FALLING off in general business is reported, sales of paints, etc., being much smaller than during the past few weeks, although still very satisfactory considering the time of the year.

Advanced prices on turpentine have materialized as predicted last week, the rise being in sympathy with the strong tone of the southern market.

Linseed oil has dropped 3 cents, the weakness in Montreal and in Great Britain forcing local dealers to meet the lower prices. The probabilities are that prices will continue at about the present figure for the present month.

Manufacturers are having difficulty in supplying the heavy demand for white lead and orders are considerably behind. Paris green is off the market with stocks in hand very light.



White Lead—Ex Toronto, pure white $5.40; No. 1, $5.02 1-2; No. 2, $4.65; No. 3, $4.40; No. 4, $4.15 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560

EARLY ORDERS WE RESPECTFULLY SOLICIT

THE CANADA PAINT COMPANY LTD

lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.60 to $2.80; white. $2.65 to $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 51c.; boiled, 54c.; 5 to 9 barrels, raw, 50c.; boiled, 53c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine — Single barrel, 89c.; 2 to 4 barrels, 88c.; 5 barrels and over, open, f.o.b. point of shipment, net 30 days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Paris Green—600 lb. barrels, 13 1-4c.; 250 lb. kegs 13 1-2c.; 50 lb. drums, 14 1-2c.; 1 lb. packets, 15c.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases. 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—As usual at this season, there is little activity. We quote as follows: Water white, 16c.; Canadian prime white, 14 1-2c.; American water white, 16 1-2c. to 18 1-2c. ex warehouse.

Glass—See current quotations at the end of this issue.

WINDOW GLASS—MONTREAL.

Shipments of window glass from Europe are still disappointingly small. Little relief has been experienced in the Canadian markets, as a result, and conditions are about the same as in our last report. We quote: First break, 50 ft., $2; second break, $2.10; first break, 100 feet, $3.75; second break, 100 feet, $3.95; third break, 100 feet, $4.50; fourth break, 100 feet, $4.75; fifth break, 100 feet, $5; sixth break, 100 feet, $5.50; seventh break, 100 feet, $6.00; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24, and twelfth do., $28.50.

GLUE WORKS PERFUMERY.

In the suburbs of an English town there is a glue factory that at times emits an odor strange and far from sweet. A tramway line runs past the building, and one day recently, when the place was indulging in a wild outburst, a car passed, in one of the seats of which sat an Irish laborer and a middle-aged lady. The Irishman's features expressed unutterable things, and the lady sniffed diligently at a bottle of smelling salts. The car came to a stop, the glue rioted worse than ever, and the son of Erin could stand it no longer. "Excuse me, mum," he said, humbly, as he doffed his hat, "but might I ask ye to put the stopper in that there bottle?"

WHITE LEAD INVENTION.

H. C. WEBSTER and R. Crawford, of Glasgow, have patented an invention relating to the Dutch process for making white lead. In this process, as described by the inventors, upon a layer of spent tan bark, earthenware pots are arranged, and have put in them suitable quantities of dilute acetic acid, the lead to be acted upon being placed upon, or both within and upon the pots. A number of the pots are larger than the others, and support boards upon which another layer of bark is placed, another series of pots being placed thereon. In a similar way several tiers or heights (sometimes called heats) are formed one above the other, and forms a stack. The handling of pots involves a considerable loss from breakages and otherwise, and the object of this invention is to avoid such losses, and at the same time to obtain better results, from a stack of given size. The invention consists in substituting lead pots or vessels for some or all of the earthenware pots. The lead pots may be shaped like the earthenware pots heretofore used, or any other suitable form of lead vessel may be substituted, such, for example, as trays with or without compartments, the vessels requiring to have raised sides to retain the quantities of dilute acetic acid for acting on the lead. As with the pots hitherto in use, lead in any suitable form is to be arranged upon, or upon and within the lead pots or vessels, and the white lead forming action takes place, not only upon such superimposed lead, but also upon the lead of the pots or vessels themselves. The thickness of the lead forming the pots may be varied, but a thickness of about one-eighth of an inch has been found convenient in practice.

ALBERTA OIL FIELDS.

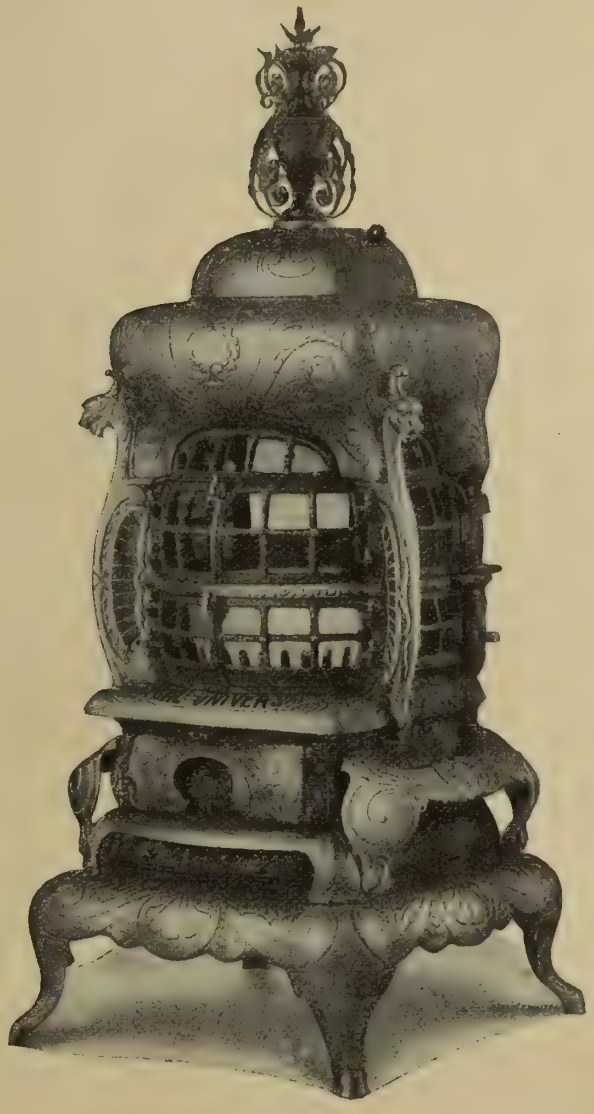
Oil that refines 99.5 per cent. pure from the seepage has been found in profusion at the Big Seepage Springs oil sections in Alberta, near the boundary line. The oil is said to be 65 per cent. pure as it comes from the wells, being of a non-sulphurous kind and giving off no smoke. The deepest well sunk, so far, is operated by the Rocky Mountain Development Co., being down 1,020 feet. The oil ledge is 20 miles wide, the centre of the industry being the Town of Oil City.

Exhibition Notice

We want to see you all at Toronto Exhibition. If you have your stove business at heart a second invitation will be unnecessary.

You Will Find Us in the Stove Building

PERFECT IDEA RANGE



The newest and most up-to-date range on the market.

Gas Attachment

Fitted with Gas attachment, making this range a perfect worker with Gas or Coal.

Loose Nickels, a great convenience.

HEATERS FURNACES

GRAND IDEA BASE BURNER

It will pay you to inspect our latest in base burners.

Every stove is a Double Heater.
Large Circulating Air Flues.
Large Tea Kettle Attachment.
Loose Fire Pot, Easily Rotated.
Large Bailed Ash Pan.
Fire Pot Removable through Front Doors.
Duplex Grates with Shaking Ring.
Automatic Magazine Cover.

WOOD COOKS BOX STOVES

You will know us by the quality of our goods and the smile we wear.

GUELPH FOUNDRY CO., LIMITED

STOVES AND TINWARE

DISPLAYING SAMPLE STOVES.

IT has been my experience that there is nothing sold in a hardware store, that is so dependent upon the manner in which it is displayed as stoves, says George M. Evanson in the Hardware Trade. There is no middle ground in their appearance—they are either attractive or totally unattractive. A stove that comes to you from a factory needs a great deal of attention before it is presentable. It will not do to give the stove a coat of blacking and then rub it over with a broom. If any of you are so treating your stoves I want to suggest that you try the following plan:

Remove from the stove all loose parts, lay them out on a box, table or bench. With a wire or steel brush go over all parts of the stove to remove any loose sand or dirt that has attached itself to the stove. Now apply a rather thick coat of good blacking, and before it dries rub the stove with a piece of burlap, after the coat dries (and it won't take long if you use a gasoline blacking) apply a second coat and treat in the same way. when this last coat is dry polish the stove with a good bristle polishing brush. For a good pair of these brushes you must pay about $1.25 each. There is no economy in buying a cheap polishing brush. I have a pair of genuine bristle brushes that I have used for ten years, and they are good to-day, so get good brushes if you want a good shine.

Now when your stove is ready for the finishing coat apply this coat to only a part of the stove at a time, and before it dries begin to rub, first with a cloth to smooth out the polish, and cover any spots that your brush has missed and then with your good brush. If you have never seen a stove blacked in this way, you will have a genuine surprise. If this is the only stove on your sample floor which has been so treated it will stand out among its fellow stoves as a planet does among the stars. Proprietors of stores do not usually blacken the stoves, but they do sell them, and they should see to it that every stove that is brought on to the sample floor is thoroughly and carefully blacked and that it shines at every point of its surface. It takes lots of elbow grease, but the stove will be twice as easily sold. The fire box linings and top of ovens should be painted a bright wagon-red, color brightens up the interior of the stove or range and makes it an attractive part of the stove for the customer to inspect.

Use Paint and Whitewash.

If you are preparing a self-feed base burner for the sample floor, whitewash all the interior parts of the stove (that can be seen by a purchaser) first, then apply three coats of good blacking and you will be well satisfied with the results of your extra labor.

I do not like the patent trucks, sold by manufacturers, for placing stoves upon, to admit of their being freely moved about on the sample floor. They add nothing to the appearance of the stove and can be supplemented with a truck made of matched flooring cleated upon the back of this platform, mounted upon frictionless casters. Use Norway pine, and instead of painting it give a coat of liquid filler after dry, sandpaper, and then apply two coats of the best floor varnish you can get your hands on. Use care in lifting a stove onto this truck and the finish will last for years. When you dust the stove wipe the surface of the platform with a damp cloth. It will add greatly to the attractiveness of the stove, and will help every salesman who shows the stove to a customer.

If one has the room, a nicer way to show a base burner is to set aside a certain number of square feet of floor space and on the floor place a bright-colored rug, a stove board next, and then set up your stove just as you would if you were putting it up in a residence.

Put a railing around the stove; make the railing of $\frac{7}{8}$-inch gas pipe, floor plates, elbows and tees. Give a coat of gold or aluminum radiator bronze. Have coal hod filled with proper size of coal, also pokers and shakers laying beside the stove or hung in their proper places.

Show the Parts.

If your base burner is of the kind that permits the fire box to be lifted out through the front mica doors, or of the grate being removed through the lower front mica doors, or the magazine is so long that it can be removed by turning a turn button, have all bolts and buttons loose enough so that they can be removed in an instant. Complete the trim by placing a couple of comfortable chairs within the railing. Now invite the lady and gentleman that calls to step within the railing and occupy the chairs. Then show them the stove and show it all to them. The rug will give the lady an idea of how pretty the nickel base of the stove is against the carpeting, and she will at once admit that the stove is going to dress up the room.

The stove you have within the railing may not be the style or size they want, but they will be interested in seeing how the stove is made and you will make a favorable impression, and once you have done that you ought to make the sale. You will wonder "why that railing!" It gives an exclusive effect to the place where the stove is and adds as much to the appearance of the stove as a frame does to a picture.

COOKING AND HEATING WITH ALCOHOL.

CHEAP alcohol in Germany is causing it to be used in a great many ways, it is said, with the very best results and at a very low cost. The United States consul at Berlin in a long article says: "Similarly attractive and interesting is the large display of alcohol heating stoves, which for warming corridors, sleeping rooms and certain other locations, are highly esteemed. They are made of japanned iron plate in decorative forms, with concave copper reflectors, are readily portable, and furnish a clean, odorless and convenient heating apparatus. Cooking stoves of all sizes, forms and capacities, form the complete range, with baking and roasting ovens, broilers, etc., to the simple tea and coffee lamp were displayed this year in endless variety. Another important advantage of alcohol, which applies specially to its use in motor carriages and in engines for operating creameries and small manufacturing plants in premises adjacent to dwellings, is its absolute cleanliness and freedom from the mephitic odors which render hydrocarbon engines so offensive to many people."

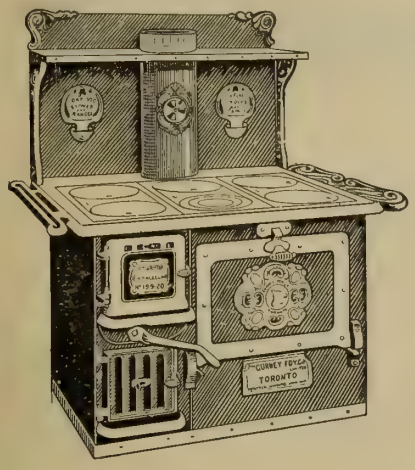
FURNACE TRADE THREATENED

In all our large cities the price of real estate is going so high that investors are finding it necessary to erect large apartment houses instead of individual dwellings, in order to make a fair interest on their capital. This tendency, which is more manifest in the large cities of the United States than in Canada, is bound to have an injurious effect on the stove and furnace trade.

One of the attractive features of the flat system is the plan of a central heating plant, so that the occupants of the various apartments are spared the trouble and expense connected with the management of stoves and hot air furnaces. The flat houses naturally find a central steam or hot water heating plant the most economical.

Store dealers in the larger cities find that this system is making serious inroads into the sales of stoves and hot-air furnaces, for each apartment in every flat house means one less possible customer for the dealer.

Under these circumstances the progressive dealer will endeavor to build up a steam or hot water heating trade, to counterbalance the decrease in his stove and furnace sales.



But the disappearance of stoves and furnaces is only a vague prophecy as yet. Even though city business falls off the merchant will find that he can build up an extensive country trade by hustling after it. The prosperity of the outlying districts is such that many fine brick houses are now to be seen on well-kept farms. To heat these buildings with antiquated box stoves would be ridiculous, and the hustling stovedealer will, for years to come, be able to keep up his business by equipping such modern farm houses with up-to-date heating plants.

GUELPH FOUNDRY REORGANIZING.

The shareholders of the Guelph foundry have decided that for the purpose of reorganization the company should go into voluntary liquidation, and Mr. W. M. Doherty has been appointed liquidator. It will be remembered that by a recent decision of the Supreme Court the company was ordered to destroy all stoves manufactured from the pattern of the Buck Stove Co., of Brantford. The factory and moulding shop are running a full force, and the proceedings will in no way affect the operations of the company. Their new range will be called the Perfect Irea.

Tenders will be received up to and including Friday, Aug. 25, for the purchase of all the assets, including lands, buildings, plant, office furniture, and back debts, the whole as a going concern.

It does not cost as much to make a handsome looking range, but it does cost us very near the selling price to make one which will bring your customers back with unshaken confidence for other purchases. Some manufacturers go to the extreme of making a fine exterior cover a multitude of interior shortcomings; others make a good interior regardless of outside appearance. We make both good, and will not issue a range from the foundry unless we know it to be the best possible in every respect. That accounts for the popularity of

THE

Oxford Chancellor Range

You can sell our goods with less than the usual effort, and if you will investigate you will find we can help you to accumulate a goodly number of satisfied customers who have not traded with you before. We supply you with advertising literature for distribution which will convince any intelligent person of the unique merits of the goods, and are co-operating with our dealers throughout the Dominion by heavy newspaper advertising. We will add considerably to your list of business friends if you will aid us with a little shop talk.

For sixty years we have been in business, improving the output each year, and the number of complaints are so very few that they need not be considered at all.

Will it not pay you to handle a range which will enable you to make your word good every time?

"FAMOUS" BASE BURNER

No. 113 SERIES

Made in two sizes for parlor and in one size with oven.

Has 12½ and 14 inch fire-pots. Large Oven and Duplex Grates.

The fire-pot can be taken out through the front doors and the operation is a very simple one.

The "Famous" has a full nickel dress very artistically arranged, and is equal, if not superior, to any other stove in its class.

PLUMBERS SETTLING DIFFERENCES.

DURING the past month feeling between the master plumbers and the supply associations in Ontario has been rather acute, the former having gone so far as to take steps to establish a co-operative supply house and to consider the placing of a boycott upon the existing supply houses. Until the master plumbers had established their own supply house it was not to be expected that a boycott could be effective, however, so that negotiations between the conflicting interests naturally continued and the air became clearer as each side better understood the position of the other.

The complaint has been that the supply houses have not been selling to association members exclusively, the former contending that they have endeavored to meet the wishes of the master plumbers so far as they were able. They have, in return, complained that certain large contracting houses were doing a jobbing trade contrary to association regulations.

Efforts have been made to avert the trade war which would result from the establishment of a co-operative supply house and the placing of a boycott, the effects of the combat being likely to be felt severely by both sides. The supply houses are understood to have threatened to meet the co-operative competition by using their influence to increase the duty on American goods, to influence the architects to specify the lines carried by the supply houses, and to meet the master plumbers on their own ground by establishing men in business to do contracting work, supplying these agents at bare cost until peace was restored. On the other hand, the Master Plumbers' Association have a strong treasury, and with a compact membership could carry on the fight for an unlimited period. They are naturally unwilling, however, to take from $25,000 to $50,000 from their treasury and invest it in stocking a supply house except as a last resort.

The matter has been discussed exhaustively by both sides, and according to street talk a settlement will soon be arrived at. A co-operative arrangement between the two associations is hinted at, the plan allowing the supply houses to sell to the trade generally regardless of association affiliation, but in return for an agreement by the master plumbers to buy exclusively from the association supply houses that the latter are to allow a special annual discount on the total of the year's business. The two interests are well organized, and Hardware and Metal has too much faith in the executive wisdom contained in the two associations to consider possible of fulfillment the dire predictions of conflict made by some who have little to lose by a declaration of war.

THE PLUMBERS' CONVENTION.

IN another part of this issue will be found our usual complete report of the annual convention of the National Association of Master Plumbers and Steamfitters of the Dominion of Canada. It is true that the bulk of the membership of the association is in Eastern Canada, but the experiment of holding the convention in the Prairie Metropolis was justified by the results. The convention was a complete success in every respect, and the presence in Winnipeg of so many eastern veterans in association work has given the organization in Manitoba a decided impetus. It seems likely that a Manitoba Provincial association will be formed before the next annual convention meets in Ottawa. The reports from British Columbia were most encouraging, and it is not improbable that the convention of 1907 may be held in Victoria or Vancouver.

For an account of the work of the convention our readers are referred to the complete report in this issue. Substantial results will follow from the deliberations of this gathering, but not the least of the benefits derived is the feeling of good fellowship engendered by such gatherings. It is a good thing for members of the same craft to meet in such conventions and cultivate each other's acquaintance.

General regret was expressed at the unavoidable absence of President Ross of Toronto who because of illness was forced to give up the idea of attending this convention. Those who know his enthusiasm for the work know how keen must have been his disappointment, and that disappointment was shared by his fellow members. It is satisfactory to know that the mantle of Mr. Ross has fallen upon worthy shoulders, and that under the guidance of President-elect A. J. Hammond the association may look forward to another year of prosperity.

MODERN PLUMBING IN THE EAST.

THE advances made by the plumbing trade during the past four years raise it to the rank of an art and a science. The utmost skill is now required in a "plumbing and heating" job; for the public have become so discriminating that they now demand not only mechanical perfection, but also real beauty in their plumbing. So much importance is being given to the equipment of the bath room that in many houses it is one of the most striking of all, and cleanliness is now a good second to godliness.

In no part of our Dominion can the difference between ancient and modern sanitation be so clearly seen as in the east. This is the oldest inhabited part of Canada and, quite naturally, there are many examples of old and even ancient building methods. And, in most parts, the conservatism of the people is such that very little progress is being made in the science.

In Montreal, however, the city is expanding apace, and side by side with old dwellings dating back to the French regime, may be seen modern apartment houses and skyscrapers, wherein the greatest attention is paid to plumbing, and the most advanced ideas are adopted. All the new buildings are equipped with "open plumbing," enamelled baths and sinks; while a great many have shower baths or sprays.

The equipment in these buildings forms such an obvious contrast with the ill-smelling and repulsive plumbing in the older dwellings, that the landlords of the latter are beginning to wake up to the fact that a change in sanitation is necessary in order to keep good tenants. The next few years will see a great change in the plumbing of Montreal's rentable houses, and even the more conservative portion of the east will, no doubt, follow the example.

A CORDIAL INVITATION.

MERCHANTS who visit Toronto to see the exhibition will want to combine both business and pleasure, and this can well be done by devoting the mornings to business and the afternoons and evenings to sight seeing. Toronto jobbers will do their utmost to facilitate the merchant's business, and their customers are welcome to inspect the Fall stocks at first hand, while in the city. The offices of The MacLean Publishing Co. are also at the service of retailers from outside points, and no more convenient headquarters or meeting place can be found than the offices at 10 Front street east, just off Yonge. We invite our readers to have their mail directed in our care and remind them that if they have a letter to write, a telephone call to make, a friend to meet, or an appointment to keep, the offices of Hardware and Metal are available for their use.

AMERICANS EXPLOITING CANADA.

COBALT'S development is another example of how our enterprising southern neighbors step in and capture the cream of the new discoveries of Canada's rich resources before Canadians realize their value, and move in time to secure the skim milk. In the Kootenays, the Yukon, the Alberta oil fields, at Sudbury and the "Soo," at Niagara, in our lumber industry, and in the power plants in Quebec and New Brunswick, the Yankees have been in the van in exploiting Canada's wealth.

At Cobalt it is the same story over again, visitors to this latest nine days wonder stating that already American companies have secured a very large share of the richest ground, the Nipissing Mining Co., said to be controlled by John D. Rockefeller, owning 1,600 acres. The Americans have been doing all the smelting at New Jersey owing to no plants being available in Ontario, but when talk arose of establishing a smelter at Toronto, the Americans controlling the copper industry of Algoma, moved swiftly and arranged to build a smelter at Copper Cliff to handle the rich Cobalt ores.

Every credit must be given our American cousins for their enterprise, but we desire to draw the attention of Canadians to the necessity of having boundless faith in the future development of Canada's riches, and the advisability of retaining control of this development by our own citizens. We cannot expect the Government to erect a high fence to exclude American enterprise, so the only way control can be retained is by developing an enterprising individuality in our own people.

COST OF ELECTRIC LIGHTING IN VARIOUS CITIES.

IN the Municipal Journal and Engineer for June, Mayor Fobes, of Syracuse, N.Y., presents statistics regarding street lighting in a large number of cities in the United States. Both private and municipal electric light plants are included in the list which is given below:

City.	Population.	Municipal or Private Plant.	Cost Per Arc Light Per Year.	Fuel Used.	Average Price Coal.	Capitalization of Plant.
Albany	93,920	private	$117.80	coal	....	$2,060,000
Allegheny	138,018	municipal	68.89	coal	$1.88	.....

THE PRODUCTION OF MICA.

MICA in its indifference to high temperatures and non-conductivity to electricity possesses physical characteristics which give it a unique position as an article of commerce, particularly in relation to electrical work for insulation purposes, and in minor degrees for lantern slides, negatives, and as a base for paints and explosives. Among other things, the mineral is distinguished by a particularly wide range of geographical occurrence, as also by a large series of mineralogical forms.
